

REPORT

OF

THE COMMISSIONERS

APPOINTED TO INQUIRE INTO

THE CONDITION AND MANAGEMENT OF
LIGHTS, BUOYS, AND BEACONS;

WITH

APPENDIX AND INDEX.

VOL. II.

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
PRINTED BY GEORGE EDWARD EYRE AND WILLIAM SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.
FOR HER MAJESTY'S STATIONERY OFFICE.

1861.

TABLE OF CONTENTS.

VOL. II

1st.—CIRCULARS ISSUED BY THE COMMISSION, I. to XI.

These contain the questions to which the returns printed in the Appendix of Vol. II., are replies, and are a key to the whole

Opposite to the questions references are given to the pages where the replies may be found. Some abstracts are given, and other information is added.

Each reply is numbered to correspond to the question to which it is an answer.

Example 1.—It is desired to know what is the description of illuminating apparatus at any lighthouse—under any of the General Authorities—

Open out Circular III., and the Question will be found as (No. 21) XXI.

Search in the map for the number of the Lighthouse in question; say No. 1 Fern, in England.

Search for No. 1. under the heading—Circular No. III., England, and the information will be found, Vol. II. p. 65, opposite to the No. XXI., and the same information for every Lighthouse will be found opposite to the same Number,—XXI.

Example 2.—It is desired to know the opinion of John Smith, Mariner, as to the best shapes and colours for buoys.

Open out Circular VIII., Mariners' Questions, and the question which elicited the information will be found opposite to —No. 17.

Search for Smith's number in the alphabetical list of Mariners, page 466, and opposite to his name is the number 292.

Look for 292, under the heading—Question 17, Mariners' Evidence, page 526, and the evidence of John Smith on this point will be found:

“292. The nun buoys, black or red, are best seen at night.”

Example 3.—It is desired to know what is the bearing of the evidence given on the same point by the whole of the witnesses.

Look to the Abstract, page 587, and the result of the evidence of 657 witnesses will be found opposite to Question 17, which elicited the information.

Example 4.—Information is wanted relative to a Local Authority; say Liverpool.

Search for the question in the Circulars, and for the name of the Local Authority under letter L, and under the heading—Local Authorities, England; and the answer to the question will be found under the Marginal Heading, and the number of the Circular, and of the Question, page 326.

Example 5.—The opinion of a Scientific Witness is wanted on any point raised by a question in Circulars IX., and X.

Search for his name, in the list on the Circular, and his evidence will be found under the number of the question.

Example 6.—Information is wanted as to some foreign country.

In Circular XI. search for the name of the country and for the question, and look to the return under the number of the question for the answer.

GENERAL AUTHORITIES.

Trinity House, England.	Commissioners of Northern Light- houses, Scotland.	Ballast Board, Dublin.	Replies to Circular.
Pages.	Pages.	Pages.

ED TO SCIENTIFIC MEN, MANUFACTURERS, &c.

now used or proposed for buoys do you think best for riding in all weathers tides and heavy seas, with the least possible strain on the moorings, and do you suggest any improvement in the form of buoys, or the method of

you recommend for sheltered situations?

the method of rendering buoys luminous at night?

Is any system generally applicable for buoying coasts, harbours, rocks, shoals, in the absence of pilots, and without the aid of a chart, vessels might be safely steered to describe it, and to state whether it is applicable to buoys now in use.

ACOUSTICS.

THE

most capable of penetrating a fog? What method do you consider best for

you recommend as the most serviceable?

(If guns are used, as also reflectors and other contrivances for directing and concentrating sound, or for throwing it in particular directions? Do you

enable mariners to distinguish with sufficient certainty the direction from which a

signal is placed, so as to be heard at the greatest possible distance?

METEOROLOGY.

Would it be desirable that lights should generally be placed on the coasts of the country, viz., the higher the light the greater the distance to which the light is visible above the horizon? The lower the light the less likely it is to be obscured

by certain lighthouses and light-vessels at salient points of the coast, what would be the most desirable to transmit to passing ships, and how and in what manner received and communicated by light-keepers?

Do you recommend for general adoption in connexion with lighthouses at the mouth of a river, the state of the tide by day and by night, to persons in the offing?

(Including balls, flags, coloured lights, illuminated figures moved by the tide, &c.,

and any good system for identifying lighthouses and floating lights by day? and what is the system now used for identifying them by night?

CIRCULAR No. X.

TO LIGHTHOUSE ENGINEERS, MANUFACTURERS, &c.—No. II.

Commissioners would be greatly obliged to you for any replies that you may be

REPLIES TO CIRCULARS ISSUED BY THE LIGHTHOUSE COMMISSION.

CIRCULAR No. 1.

ENGLAND.

The numbers in the margin correspond with the numbers of the Questions in Circular I.

CONSTITUTION OF GENERAL LIGHTHOUSE AUTHORITY.

I.

RETURN TO REQUISITION, dated 27th May 1859.

QUESTION 1. "RULES AND REGULATIONS now in force for the admission of Younger Brethren, and the Election of Elder Brethren."

RULES AND REGULATIONS in relation to the admission of Younger Brethren and the Election of Elder Brethren of the Corporation of Trinity House of Deptford Strond.

At a Court held on Thursday, 12th February 1835,—

It was Resolved, That all Regulations which have been at any time established respecting the qualifications and admission of Younger Brethren and Candidates, and the qualification and election of Elder Brethren, be rescinded, and that the following Regulations be established in lieu thereof; viz.—

That any person desirous of becoming a Younger Brother shall be admissible at the pleasure of the Court, upon the proposition of any one Elder Brother, and without ballot, as heretofore.

That the Thirty-one Elder Brethren shall consist of not less than Twenty Persons, bred in the maritime service of the United Kingdom, who shall be deemed the acting Elder Brethren; and the remainder of either Ministers of State, Naval Officers of high rank, or other distinguished characters, who shall be considered Honorary Brethren, and not required to take active part in the discharge of the duties of the Corporation, although not restricted from so doing, should it be their pleasure to attend the Courts or Boards.

That any Younger Brother desirous of being admitted a candidate for the situation of a Maritime Elder Brother, shall, on notifying the same to the Deputy Master or other Member of the Court, be questioned as to his eligibility, by maritime service, to be elected an Elder Brother; which having been ascertained, the proposition for his admission to the List of Candidates may be made to the next Monthly Court, when the proposer and seconder shall declare that, to the best of their knowledge and belief, the person proposed is strictly eligible according to the regulations hereafter stated, so far as they relate to maritime service; and at the ensuing Monthly Court a ballot shall be taken upon that proposition.

That no Younger Brother shall be eligible to be placed upon the List of Candidates to fill the office of an Elder Brother in room of any of the Maritime Members, who shall not have attained the rank of Commander in His Majesty's Navy for at least four years previously, and have served as such afloat during part of that time, or shall not have served as Master in the Merchant service on foreign voyages for at least four years.

That no candidate shall be eligible to be elected an Elder Brother, on a vacancy occasioned by the death, resignation, removal, or otherwise, of either of the Maritime Members, who shall at the time be in the command of a vessel in His Majesty's Navy, or who, having been admitted a candidate from the Merchant service, shall be in the command of a merchant vessel, or shall at the time hold any commission or warrant in His Majesty's Navy, or shall be in the employ of any public body, corporation, department, or individual

I.

whatsoever (except as director or member), or in any way under the control of the same, nor if he be at the time a broker, wharfinger, or shopkeeper.

That if any of the Maritime Members shall accept either of a command in His Majesty's Navy, or shall take the command of or any situation in a merchant vessel, or shall accept of any appointment under any public body, corporation, department or individual whatsoever, so as to be under the control of the same (except as a director or member), or shall become a broker, wharfinger, or shopkeeper, he shall be considered to have fallen within the terms of the charter, which provide for the displacing of Elder Brethren, and shall be displaced accordingly; and the Elder Brethren shall thereupon proceed to a new election in the manner herein-after provided, and shall elect either the person so displaced or any other who shall be eligible, according to the foregoing regulations.

That on the death, resignation, or removal of any Elder Brother, the vacancy thereby occasioned shall be notified at the next Monthly or Special Court, when it shall be determined whether the vacancy shall be filled by an Honorary or by an Acting Member, and a time appointed for a Special Court to be convened for the election of a successor, at such interval as shall allow of ten days' notice thereof being given.

That at the Court convened for the election of an Elder Brother, if it shall have been resolved to fill the vacancy by an Honorary Brother, the election shall be made by the majority of voices of the Elder Brethren present; but if it shall have been resolved that the successor shall be chosen from the maritime service, to take active part in the discharge of the duties of the Corporation, then the book containing the List of Candidates shall be handed by the Secretary to each Member present, beginning with the junior, who shall make one scratch against the name of each of three eligible candidates; and the names of the three candidates which shall have the greatest number of scratches, shall be placed on the balloting box and be balloted for, and whoever has the greatest number of balls, provided such number be that of the majority of the Brethren present, shall be by the Master or his Deputy declared duly elected; but if the balls are so divided that such majority is not given to either of the three, then the names of those two who shall have the greatest number shall be again placed on the box and balloted for, and whoever has the greatest number of balls shall be in like manner declared by the Master or his Deputy duly elected; whereupon the Court shall be adjourned to a subsequent day, upon which the Elder Brother so elected shall attend to be sworn, and to take his seat at the Board. But if in this proceeding it be found that the balls are divided in equal numbers, either upon the first, as regards three, or upon the second ballot as regards two, the Master or his Deputy shall adjourn the Court to a future day, when the ballot shall be renewed, and the election made in the manner herein-before directed.

J. HERBERT, Secretary.

Circular I.
Question V.

QUESTION V. "Division of Duties of the Elder Brethren, with names of individuals filling each office or composing each Committee, with mode of appointment, describing the functions of the General Board, and the amount of executive or administrative powers vested in each Committee."

For the efficient performance of the various duties of the Board the Elder Brethren are divided into committees, as follows, each committee taking its separate department:—

1st. *The Wardens*, of which the Deputy Master habitually acts as chairman. For all duties connected with treasury and finance, including questions of light dues collection, and repayment, the supervision of the accounts of every branch of the service, the examination of claims on the consolidated duties of customs, the examination or preparation of all forms of contract, and the acceptance or rejection of tenders thereon, the immediate supervision of the general working of the establishment and service, and all subjects connected with other departments involving special attention and consideration, referred to joint committees by the Board.

2d. *The Supervisors of the Ballast Department*.—For the general supervision of all matters connected with the ballast-getting service in the River Thames below London Bridge, the regulation of a proper and prompt supply of ballast to the trade, the superintendence of the building and repair of all dredgers, lighters, and barges, and of the management and efficiency of their crews, the investigation of all cases of collision with ballast craft, and the adjudication thereon, the examination of the accounts of receipt and expenditure, and attention to all the various matters of detail connected with the service.

The supervisors are also charged with the regulation of the ballast-heaving service of the river, so far as the heavers have voluntarily placed themselves under the protection of the Corporation.

3d. *The Examining Committee*.—To examine into the qualifications as pilots of masters in the navy, and other persons referred to the corporation by the Lords Commissioners of the Admiralty, and to certify the result for transmission to their Lordships. To examine into the competency and qualification of persons applying to be licensed as pilots under the authority of the Corporation, and into the capacity of masters and mates in the merchant service, to pilot vessels of which they have charge, or others belonging to the same owners, for the rivers Thames and Medway, or the channels leading thereto; also to the westward as far as the Isle of Wight, and to the northward to the Baltic, and as far as Yarmouth Sands and Smith's Knowle, including Harwich, the Blackwater and Chelmer to Maldon, the Coln and Burnham, and vice versa; or for any intermediate distances. Also of persons desirous of obtaining an extension of the limits granted under the authority of previous licences; but the Committee cannot in either of the cases mentioned proceed to the examination of any person who has not been previously approved by the Committee for Pilotage, nor unless a warrant for his examination has been issued under the signature of the Deputy Master. The Committee also make an annual examination of the sands between Yarmouth and the South Foreland, and other localities where changes are likely to have taken place, and all notices to mariners are referred to them previous to issue, as well as all subjects which may have for object the practical improvement of navigation or the advancement of nautical science.

4th. *The Committee for Pilotage*.—To consider all subjects which are brought under the notice of the corporation with reference to pilotage in the home district and at the outports, and either to give immediate directions thereon or recommend a course of proceeding for adoption by the Board, as requisite. To supervise the proceedings of the superintendents or rulers of pilots at the Cinque Ports and Gravesend, and of the sub-commissions at the out-ports, more particularly with regard to the maintenance of a prompt and efficient supply of able and qualified men, with suitable vessels for the pilotage service. Personally to superintend and regulate the pilotage business at the port of London, including the character and conduct of all pilots, and the investigation of any complaints which may be made against them. To visit the outports to inquire into important questions that may arise connected with the

service. To examine or prepare all pilotage accounts and generally to carry out the provisions of the fifth part of the Merchant Shipping Act, 1854.

5th. *The Committee for Lighthouses, &c.*—To visit, at least once in each year, every station and store, including rock stations when possible to land, thoroughly inspect their efficiency, suggest needful alterations and repairs, and procure estimates for the same. To visit and inspect every light ship in like manner, to muster the crews, inspect their logs and expenditure books, and inquire into all complaints, accidents, &c. To take all light vessels to and from their stations; to superintend the construction and repair of all light vessels, buoys, and beacons. To regulate the employment of the steam and sailing vessels of the Corporation. To examine into the fitness of persons applying to be appointed lightkeepers or seamen. To take the general management of all such servants, and prepare recommendations to the Board in regard to removals, promotions, suspensions, grants of pensions, &c., and on all points connected with the due organization of a large body of men. To take preliminary steps in regard to contracts, and to arrange the tests for oil, stores, &c. To attend at the testing of mooring chains. To suggest, arrange, and superintend all experiments connected with the improvement of lighting apparatus, systems of lighting, buoying, &c. To examine into the expenditure of oil and other stores, to regulate the same, and order supplies to the stations. To see that the light-keepers are supplied with the portable libraries provided for their use, that divine service is performed on board the light vessels or stations remote from churches, and that every station on shore or afloat is maintained under the most favourable conditions as regards sanitary arrangements. To prepare the annual estimates connected with the department. To examine the accounts of disbursements by the agents and all other accounts relating to the business of the Committee, to ascertain that due economy is exercised in providing the supplies of necessary articles, and in conducting each establishment, and that the accounts of the tradesmen, when not at contract prices, are charged at fair and reasonable rates, and on approval to certify the same for payment by the Committee of Wardens. To give daily attendance at the house by one or other of their members in case of any exigency arising, and in the event of accident or collision to proceed at once to the station, and make the best arrangement practicable, both as to temporary measures and the settlement of salvage claims and awards for services rendered. To take measures for procuring lighting apparatus, stores, &c. for lighthouses abroad, when requested to do so by the home government. To furnish foreign governments, on application, with such particulars as may be required relative to the Trinity House system of lighting and buoying. To consider all letters and reports from the agents and others relative to the establishment or condition of the several lighthouses and floating lights, steam vessels and tenders, storehouses, buoys, and beacons, and to give such directions as are requisite, or make report thereon in their minutes to the Board or Court.

The members of the Light Committee are also chargeable with the personal superintendence of all the duties afloat in the home district, the monthly relief of light vessels, half-yearly buoy-shiftings, &c., &c., and, as a general rule, every committee afloat is made to include one or more members of the Light Committee.

6th. *The Committee for Pensioners*.—The duties of the Pension Committee formerly comprehended the grant and payment of all charitable pensions, but these having ceased, as regards all fresh applicants, in 1853, the functions of the Committee on that head have nearly terminated. Their remaining duties are to investigate the qualifications of applicants for occasional relief, and of the candidates for the Corporation's almshouses.

7th. *The Committee for House Affairs*.—To take charge of the maintenance and repair of the house on Tower Hill, to regulate the official and domestic accommodation therein, and to superintend the disbursement of all expenses connected therewith.

Under the charter of incorporation the Elder Brethren are also required to assist the Judge of the High Court of Admiralty on the hearing of cases in which questions of nautical experience are involved. Two attend at each case, on the requisition of the Judge.

All the Elder Brethren are *ex officio* members of the Ramsgate Harbour Trust, the Deputy Master and three others being at present on the Executive Committee.

Two of the Elder Brethren are also members of the Thames Conservancy Board; one, the Deputy Master, *ex officio*, the other being appointed by the Court of the Corporation.

ENGLAND.
Circular I.
Question V.

V.

CONSTITUTION OF GENERAL AUTHORITY, &c.

The names of the individuals at present filling each office or composing each Committee are as follows:—

Rear Admiral ROBERT GORDON, Deputy Master.

The Wardens,

- (The Deputy Master acting as Chairman.)
- Captain W. E. Farrer, Rental Warden.
- „ Henry B. Bax.
- „ Charles Weller.
- „ William Pixley.

The Supervisors of the Ballast Department.

- Captain Henry Shuttleworth.
- „ Gabriel J. Redman.

Examining Committee.

(For the Examination of Masters, &c. in the Royal Navy, Masters and Mates in the Merchant Service, Pilots, &c.)

- Captain T. Narramore Were.
- „ William Pigott.
- „ John Fenwick.
- „ James Drew.

Committee for Pilotage.

- Captain J. Sydney Webb.
- „ Frederick Madan.
- „ Charles Farquharson (Lieut. R.N.)
- „ John Fulford Owen.

Committee for Lighthouses, &c.

- Captain Mark C. Close.
- „ George Bayly.
- „ Richard W. Pelly, R.N.
- „ Edward Parry Nisbet.
- „ Frederick Arrow.

Committee for Pensioners.

- Captain William Pixley.
- „ Gabriel J. Redman.
- „ John Fulford Owen.
- „ Edward Parry Nisbet.

Committee for House Affairs.

- Captain William E. Farrer.
- „ Henry B. Bax.
- „ Gabriel J. Redman.
- „ John Fulford Owen.

The House and Pension Committees are composed of members of other committees.

The senior member of the Corporation is usually exempt from all committees, but is not so on the present occasion.

The appointment of members to serve on the above committees is made at a General Court of the Corporation, held before Trinity Monday in each year, when new members are selected to take the places of those going out by rotation, or otherwise, on Trinity Monday; and in the case of the Wardens, two are elected annually in the room of the two who have served their time as prescribed by the charter. The Deputy Master is *ex officio* chairman of all committees.

The functions delegated to the various committees are limited to matters of routine only, any question not strictly within that category being considered and discussed by the General Board at its weekly meetings, before being remitted to the committee to whose department the subject may refer. The minutes of the various committees on such special subjects, as well as on all matters in their respective departments, are, together with those of the weekly boards, read at the monthly courts, and confirmed, or otherwise, as may be determined upon. The accounts of the Corporation are audited quarterly by the General Board, in the manner more particularly described elsewhere.

P. H. BERTHON,
Secretary.

Trinity House, London,
24th December 1859.

RETURN TO REQUISITION, dated 27th MAY 1859.
SECTION VI.—“APPOINTED DAYS OF BOARD AND COMMITTEE MEETINGS.”

The General Court	On Trinity Monday for elections of Master and Deputy Master, and for making appointments to Corporate Offices under the Charter, and on the first Tuesday in every month.	For Pilotage For Lighthouses, &c. For Pensioners For House affairs	Every Tuesday. Every Tuesday. Every Tuesday. Every Tuesday.
The Board	Every Tuesday, except when Courts are held.		
The Audit	The fourth Tuesday in the months of January, April, July, and October.		
The Wardens	Every Tuesday.		
Supervisors of the Ballast Department	Every Tuesday.		
For examination of Masters, &c. in R.N., Pilots, &c.	Every Tuesday.		

The foregoing are the appointed days of meetings, but for many years the business has rendered more frequent meetings necessary, the Light and the Examining Committees therefore meet also on Thursdays, and in common with the other committees assemble by adjournment or special summons whenever requisite.

P. H. BERTHON,
Secretary.

Trinity House, London,
16th December 1859.

Trinity House, London,
16th December 1859.

Note.—This portion of the return furnished by the Trinity House was accompanied by voluminous lists giving all the information required; but it was not thought necessary to print them.

P. H. BERTHOX,
Secretary.

VIII.

CONSTITUTION OF GENERAL AUTHORITY, &c.

VIII.

ENGLAND.

RETURN to REQUISITION dated 27th May 1859.

QUESTION VIII.—NAMES of ELDER BRETHREN who had been employed on SPECIAL SERVICES or INSPECTIONS in 1857 and 1858, describing Services on which they were employed, and time occupied in such Services.

The duties aforesaid belong more especially to the Light Committee, but other Elder Brethren are frequently associated with them, or are appointed by the Board to a particular duty.

Captain WERE.—1857, Jan. 7 to 9.

Relieving crews of light-vessels, &c., London district.

Captains SHUTTLEWORTH and CLOSE.—January 19 to 21.

Attending at Plymouth to inquire into the charges made against the Corporation's superintendent there, by a discharged seaman.

Captain REDMAN (with Messrs. Walker and Burgess, Engineers).—January 26 and 27.

Inspection of the Maplin Lighthouse, which had been struck by a vessel.

Captain WERE.—February 4 to 6.

Relief duty, London district.

Captains OWEN and DREW.—February 12 to 16.

Committee to Padstow, to investigate into the charges of neglect on the part of the pilots of that port, preferred by the Receiver of Droits thereat, in the matter of the loss of the smack "Ann" of Jersey, and the grounding of the steam ship "Royal Adelaide."

Captain SHUTTLEWORTH and four other Brethren.—February 23.

Trial trip of the new steam vessel "Argus."

Captains BAX, DREW, and WERE.—March 4 to 6.

Relief duty, London district.

Captains SHUTTLEWORTH, REDMAN, and CLOSE.—March 4 to 11.

Committee to Bristol and St. George's Channels.—4th, visited Milford and works at Solva; 5th, inspected lantern and apparatus at Solva; 6th, inspected St. Ann's and timber for Smalls lighters; examined Caldly Sound; visited Caldly establishment. 7th, placed a buoy in the fairway from Caldly Roads. 9th, placed a wreck buoy; inspected Tuskar Beacon; inspected Nash. 10th, inspected Usk and Flat-holm, and placed the Cockburn Spit buoy; visited the Avon Light; proceeded to Bristol, and returned to London.

Captain WERE.—March 24 to 27.

Buoy shifting duty, and verifying correctness of position of each buoy, &c.

Captains SHUTTLEWORTH, FARQUHARSON, BAX, and REDMAN.—April 1 to 4.

Committee to the Varne Shoal.—Left London with buoy in tow. 2d, parted hawser off Dover with heavy sea; bore up for Ramsgate. 3d, left Ramsgate without buoy; examined shoal; laid several watch buoys; laid a wreck buoy; weather being hazy, proceeded for Dover Roads. 4th, weather continuing thick, proceeded for Prince's Channel, and substituted a smaller buoy for that at the North Tongue; sounded along the edge of the Girdler Spit; visited Nore Light vessel, and returned to London.

Captains WERE and PIGOTT.—April 1 to 6.

Buoy-shifting duty, &c.

Captain SHUTTLEWORTH (with Mr. Burgess, C.E.)—April 9 to 11.

To Point of Air Light.—A chasm having opened in the sand near the foundations.

Captains BAX and WERE.—April 22 to 28.

Committee to the Varne Shoal, Needles, &c. Anchored at Nore. 23d, laid a wreck buoy at the Mouse; landed oil and stores at Ramsgate; examined the Bunt Head and South Brake; sounded the Varne, and returned to Ramsgate. 24th, left Ramsgate with the Varne buoy, and laid it; put a new globe on the Royal Sovereign

buoy; 25th, at Cowes; visited the Needles Rock and Totland Bay Station; visited the Hurst Lighthouses; coaled at Southampton; returned to Cowes. 27th, proceeded to Ramsgate; took in empty tins, buoys, &c. 28th, at Blackwall.

Captains REDMAN and FARRER.—April 22 to May 2.

Committee to St. George's Channel.—23d, off the Eddystone, unable to land; proceeded for the Catwater. 24th, off Longships, unable to land; proceeded for Lundy Island, unable to land; steered for Milford. 25th, visited buoy stores and inspected lighters. 27th, landed on Smalls, inspected lantern, supports, &c.; visited works at Solva; landed, and inspected South Bishop and Bardsey. 28th, visited South Stack, and inspected plans of new dwellings, &c.; visited Skerries. 29th, landed stores; and inspected Menai and Point of Air, and house and buoy store at Hilbre Island. 30th, visited buoy store at Ramsay; delivered stores, and inspected Bahama Bank light vessel; visited St. Bees, and returned to London.

Captain SHEPHERD, Deputy Master; Rear-Admiral GORDON, Captains BAX, REDMAN, DREW, and WERE (Captain Sullivan, of the Board of Trade, with the Committee).—May 6 to 26.

Committee to West of Ireland and round Scotland.—7th, inspected Longships; met the "Vestal" with committee of Port of Dublin corporation off Queenstown. 9th, unable to land at Fastnet Rock; landed on and attempted ascent of Bull Rock; visited Skelligs; steered round the Foze Rock; examined the Blaskets; anchored in Valentia Harbour. 11th, examined Achill Head, Black Rock, &c.; anchored in Broadhaven Bay. 12th, anchored in Ballycastle Bay. 13th, brought up off Crinan; proceeded to Oban for coals. 14th, inspected locality of Corran Point; returned to Oban. 15th (with Mr. Stevenson, C.E., and Mr. Anderson, master of the "Pharos"); landed on the island of Pladda or Bladda; proceeded through sound of Jura; examined Ruadh Rock or Grunc; landed on the Skuervoile or Iron Rock; proceeded towards the Sound of Islay; landed at McArthur's Head; landed and examined the Black Rocks; landed at Rhu Vaal; proceeded to Loch Leagh, and anchored. 16th, through Iona and Kerrera sounds to Oban for coals. 18th, passed Lismore, Ardnamurchan, Isle Oronsay, and Guilan Island lighthouses; took refuge in Portree. 19th, passed through Rona Sound, to inspect lighthouse; passed Rhu Rea, Priest Island, and Morehead; landed at Stourhead, and examined surrounding coast; proceeded round Cape Wrath, and anchored in Serabster Roads. 20th, proceeded through the Pentland and round the east coast; landed, and inspected Buchanness; arrived at Aberdeen. 21st, Captain Sullivan and Mr. Stevenson left; proceeded from Aberdeen; visited Bell Rock Lighthouse; moored alongside Granton Pier. 22d, coaled. 23d, visited outer Fern; landed on Coquet Island. 24th, visited Seaton and Tees buoy store. 25th, examined Tees Navigation with Mr. Lister, the agent; stopped in Ilwak Roads; visited Spurn lighthouses; proceeded for London.

Captains PIGOTT and FENWICK.—May 7 to 9.

Relief duty, and changing position of the Bunt Head buoy.

Captains SHUTTLEWORTH, BAX, CLOSE, FENWICK, and BATLY.—June 9 to 13.

Committee to Portland and the Isle of Wight.—Anchored in Margate Roads on account of weather. 10th, in Totland Bay; visited Needles, and landed oil and stores; visited Hurst Lighthouses, and landed oil and stores. 11th, at Portland; landed stores, and visited lighthouses, &c.; proceeded for St. Catherine's, but found too much sea on to land; proceeded for

VIII.

Cowes, landed oil and stores, and anchored in St. Helen's Roads. Inspected and landed stores at Beachy Head, Dungeness, and South Foreland; returned to Blackwall on 13th.

Captains BAX, WERE, and FENWICK.—June 18 to 22.

Committee to Yarmouth.—19th, inspected stores and wharf and St. Nicholas Light Vessel; sounded along the west side of the Scroby and the Cockle and Barber Sands; boarded the Stanford Light, and returned to Lowestoft Harbour. 20th, examined Stanford Channel and Pakefield Gat; sounded about the Newcombe Sand; laid a wreck buoy in position, to which the Stanford Light Vessel was subsequently moved; sounded about the Kettlebottom, South Scroby, and back of Cross Sands; relaid the South Barber buoy, and returned to Yarmouth.

Captains PIXLEY, FARRER, and SHUTTLEWORTH.—June 18 to 26.

Committee of Inspection and Supply to the westward.—The Tortoise lighter taken in tow off Southend, but cast off at the Nore on account of weather; master instructed to proceed to Totland Bay when practicable. 19th, off the Start, unable to land; moored in Mill Bay, and coaled. 20th, landed oil and stores at Lizard; inspected station, and received empty tins; landed at Sennen Cove; visited Longships dwellings; visited Longships Light; anchored at Penzance. Monday 22d, in St. Mary's Roads; inspected work on shore for the "Bishop;" steamed round the "Bishop;" unable to land; examined premises at St. Agnes. 23d, returned to Sennen, and re-inspected dwellings with surveyor, &c.; touched at Falmouth; coaled at Plymouth; proceeded for Eddystone: unable to land; visited Start; took in empty tins at Portland; landed at Dungeness; laid a wreck buoy between Folkestone and Dover; anchored in the Downs: arrived at Blackwall.

Captains CLOSE and BAYLY.—June 19.

Committee to shift Seven Stones Light Vessel, and for Lundy Island.—When off Broadstairs, discovered new cylinder cover of the engine to be defective and dangerous; returned to Blackwall.

June 24 to July 2.—The above service resumed. 25th, coaled at Plymouth. 26th, anchored off Lundy; commenced landing cases of lighting apparatus and stores; inspected establishment; proceeded to Milford, and coaled. 27th, inspected ground proposed for new buoy store at Wear Point; inspected coal hulk and spare light vessel for Seven Stones; took the latter in tow, and anchored at Scilly. 29th, took the spare light vessel in tow, and moored her; proceeded for St. Mary's with old vessel in tow; bore up, and anchored at East Grimsby in consequence of heavy sea. 30th, proceeded for Plymouth; saw that the Seven Stones was all right; sighted the Wolf; coaled at Millbay; inspected the Breakwater Light; anchored at Portland for empty tins. 1st July, in Totland Bay; inspected Hurst Lighthouses; visited buoy store at Cowes; inspected Beachy Head; sighted Royal Sovereign and Varne buoys.

Rear-Admiral GORDON and Captain REDMAN.—June 23.

To North Foreland Lighthouse and Reading Street Beacon.

Captains BAX and DREW.—June 26 to 29.

Committee to the Tees.—Arrived at Stockton; called on secretary to Tees Conservancy Board; proceeded to Middlesbrough; had interview with dockmaster: weather too thick to see beacons; had interview with a commissioner and the engineer; returned to Stockton, after ascertaining that the only safe channel was buoyed off.

CONSTITUTION OF GENERAL AUTHORITY, &c.

Captain FENWICK.—July 8 and 9.

Relief duty.

Captains CLOSE and BAYLY.—July 9 to 22.

Committee to the westward.—10th, anchored and coaled at Plymouth. 11th, inspected Breakwater Light; stood out to the Eddystone, but found too much sea on to land; landed and visited Lizard; attempted to land at Bishop, but too much sea on; landed stores at St. Mary's, and inspected Seven Stones Light Vessel there. 13th, attempted to land at Longships, but too much sea on; landed stores, and inspected establishments at Trevoise and Lundy; anchored at Milford. 14th, received stores for Helwicks; laid two buoys in Caldy Sound; landed stores, and visited lighthouse. 15th, relieved and inspected Helwicks Light Vessel; visited Bideford, and landed stores; inspected Nash and Flatholm, and landed stores; supplied stores to and inspected English and Welsh Grounds Light Vessel; inspected Avon; unable to land at Burnham. 17th, landed stores and inspected Burnham; coaled at Cardiff. 18th, inspected Usk and buoy store at Cardiff. 20th, landed and inspected Smalls; unable to land at South Bishop; inspected the Bardsey and South Stack. 21st, inspected Menai and Black Rock Beacon; visited Skerries, and proceeded to Milford. 22d, inspected establishment at St. Ann's, and returned to London by rail.

Captain DREW.—August 5 and 6.

Relief duty.

Captains REDMAN, BAX, FENWICK, and BAYLY.—August 5 to 11.

Committee to the Owers, Caskets, &c.—6th, surveyed the Owers Sand, and changed the moorings and position of the light vessel; anchored off St. Catherine's, and visited the establishment. 7th, made fast at Alderney, blowing too hard to proceed to the Caskets. 8th, still blowing hard with a heavy sea. Monday, 10th, proceeded for the Caskets; landed stores, and inspected the establishment; returned to Alderney; landed the agent and labourers; proceeded for London, and arrived there on the 11th.

Captains SHUTTLEWORTH, PIXLEY, PELLY, CLOSE, and WEBB.—August 12 to 25.

Committee to East Coast and Heligoland.—13th, visited and supplied the Winterton, Haisbro', and Cromer establishments; visited the Dudgeon Light Vessel, and anchored in Hawke Roads. 14th, visited the Spurn Point establishment; anchored in Bridlington Bay; landed, and visited Flamborough Head establishment; examined cliff and headlands, for the purpose of ascertaining the best site for a fog signal station; anchored off Hartlepool. 15th, landed stores at Seaton; proceeded to North Shields for coals; unable to land at the Coquet, there being too much sea on; anchored under the Inner Fern Island in a thick fog. 16th, visited and supplied the Ferns; returned to the Coquet, where the carpenter broke his leg in assisting landing chains, sinks, &c.; proceeded to Bridlington for a surgeon, and landed the man. 18th, proceeded for Heligoland. 19th, surveyed the cottage, &c., in company with surveyor and agent; proceeded to Gluckstadt for coal. 21st, called at Heligoland for empty tins and cases. 22d, inspected the Leman and Ower, Haisbro' and Lynn Well Light Vessels; anchored off Hunstanton. Monday, 24th, too much sea on to board any of the light vessels off Yarmouth; proceeded for Lowestoft; visited the establishment, as also that at Pakefield; anchored at Harwich. 25th, visited the establishments and the Sunk Light Vessel, and returned to Blackwall.

Captains CLOSE, BAX, and BAYLY.—September 2 to 5.

To place the Bembridge Light Vessel.

VIII.

CONSTITUTION OF GENERAL AUTHORITY, &c.

VIII.

ENGLAND.
Circular I.
Circular VIII.

Captain BAYLY.—September 8 to 13.
To South Sand Head, Goodwin and Aldbro' Knaps.

Captain REDMAN (with Mr. WILKINS).—September 15 to 18.
To Lundy, to inspect the apparatus of that light, it being out of order.

Captain SHUTTLEWORTH and one other Elder Brother.—September 23 to 25.
To Yarmouth, Lowestoft, and Pakefield.

Captains BAYLY, WEBB, and FENWICK.—September 22 to 26.
Buoy shifting, &c.

Captains BAYLY, WEBB, and FENWICK.—September 29 to October 2.
Buoy shifting, &c.

Captain SHEPHERD, Deputy Master, and other Brethren, with Mr. FARADAY.—October 13.
Committee to Brentwood.—To observe experiments made at Blackwall for testing the relative power and efficiency of different systems of illumination.

Ditto - ditto.—October 20.
Committee to Hornchurch.—The same.

Ditto - ditto.—November 10.
Committee to Hornchurch.—The same.

Captains SHUTTLEWORTH, CLOSE, and NISBET.—October 14 to 28.
Committee to the Westward.—16th, coaled at Plymouth, and anchored at Scilly. 17th, took the Seven Stones Light Vessel in tow; when clear of the islands found too much swell, and wind freshening; bore up, and anchored in St. Mary's Sound. 18th and 19th, a fresh gale. 20th, left with the light vessel, and moored her at her station; weighed moorings of the Spare Light, and took her in tow, and arrived at Milford on the 21st. Examined the plot of land for Corporation's store pointed out by the Admiralty. 22d, proceeded to the northward; when off St. David's Head encountered a heavy gale at north-east, with a high sea running; deemed it prudent to bear up; returned to Milford. 23d and 24th, gale still continuing. Monday, 26th, left Milford; landed, and examined Lundy Island; anchored in Falmouth Harbour. 27th, received empty tins at Plymouth, and arrived at Blackwall on 28th.

Captains BAX, FARQUHARSON, FENWICK, and BAYLY.—October 29 to 31.
Committee to Sea Reach and the Medway.—Landed a temporary beacon on Canvey Island; proceeded up the Medway; the weather coming on thick, anchored at Sheerness; proceeded to Canvey Island; fixed beacon; sounded at low water over the Yantlett Middle; placed temporary buoys; took angles, &c.; anchored in Leigh Roads. 31st, sounded round the Yantlett Middle; proceeded up the Medway, examining marks up Chatham Reach; landed near the Scar Houses, and determined the position for a beacon on Canvey Island, to lead open south of the Chapman Light House into the best water between the Yantlett and river Middle; returned to Blackwall.

Captains BAYLY and FENWICK.—November 4 to 6.
Relief duty.

Captains SHEPHERD (Deputy Master) and BAYLY and two other Elder Brethren.—November 7.
To Woolwich, to inquire into the fitness of maroons for fog signals.

Captains BAX and WERE.—November 5 to 9.
Committee to the Tees.—To mark the alterations in the entrance of the Tees, and to shift lights and buoys accordingly; and to Redcar, to enable the Board to report upon letter from Earl of Zealand to the Board of Trade relative to lights to guide fishing vessels into the anchorage in the "Lead."

Captains BAYLY, FENWICK, WEBB, and NISBET.—November 10 to 13.
Buoy shifting.

Captains BAYLY and FENWICK.—December 1 to 4.
Relief duty.

Captains REDMAN, CLOSE, and NISBET.—1858, January 14 to 23.
Committee to Holyhead &c.—By railway to Milford; went on board the "Vestal," off the Point. 15th, steamed to Milford, and inspected the "Solva" tug; proceeded to Nayland, to select a site for proposed store; anchored in Dale Roads. 16th, inspected Bardsey establishment; anchored at Holyhead. Monday, 18th, proceeded to the telegraph station, accompanied by Mr. Righy, to make arrangements for experiments with gun and maroons; inspected the South Stack establishment. 19th and 20th, blowing very hard. 21st, left Holyhead Harbour for South Stack; witnessed experiments with fog-bell, gun, and maroons. Inspected Skerries; returned to Holyhead Harbour. 23d, returned to London.

Captains SHUTTLEWORTH, WERE, FENWICK, BAYLY, WEBB, and NISBET.—February 2 to 6.
Committee to Antwerp.—Accompanying the Royal Yacht conveying their Royal Highnesses the Prince and Princess Frederic William of Prussia; proceeded down the river from Gravesend, about two cables' length in the wake of the Royal Yacht, and anchored at the Nore. 3d, proceeded ahead of the yacht, sounding at times; received a despatch from the yacht for Her Majesty; handed same to the master of a Belgian steamer bound to London; arrived at Antwerp. 5th, proceeded for London; anchored on the edge of the Cant. 6th, arrived at Blackwall.

Captains BAYLY, BAX, and NISBET.—March 3.
Relief duty.

Captains BAX and FENWICK.—March 10 to 16.
Committee to the Tees.—Arrived at Stockton, and had a conference with the secretary to the Conservators as to putting out the Bran Sand Lights. 11th, a further conference on same subject with secretary and engineer. 12th, proceeded to Scaton, a strong gale blowing; inspected the buoy store, &c. 15th, examined the Channels; took bearings, &c.; arrived at Middlesbro', and proceeded on to Stockton; met three of the commissioners and the engineer, and conferred respecting the placing of temporary lights.

Captains BAYLY and WEBB.—March 18 and 19.
To shift the Swin Middle Light Vessel.

Captains PIXLEY, SHUTTLEWORTH, CLOSE, and NISBET.—March 17 to 24.
Committee to the Westward.—Left Blackwall with the Godrevy Light Vessel in tow, and anchored for the night on the Cant. 18th, proceeded, and coaled at Plymouth. 20th, arrived in St. Ives Bay; engaged a crew, and proceeded (accompanied by the harbour-master, Lloyd's agent, and two of the most experienced pilots and others), to select a spot for the light vessel; took marks and angles, and placed two temporary buoys; towed out the light vessel, and moored her; on sounding round the Stones, discovered the mast of a sunken vessel, of the loss of which the authorities at St. Ives were unaware; placed a 6 ft. buoy outside the Stones, to test the quality of the holding ground; too much swell to land on Godrevy; anchored in St. Ives Bay; light exhibited the same evening. Monday, 22d, landed, and inspected Longships; anchored at Sennen Cove, and inspected oil store and Dwellings; proceeded, and moored in Plymouth Sound; coaled. 23d, stood out for the Eddystone, but unable to land; proceeded, landed, and inspected the new lighthouse at the Needles;

ENGLAND.

VIII.

inspected the Calshot Light Vessel, and arrived on the 24th at Blackwall.

Captains BAYLY, NISBET, WEBB, and FENWICK.—March 30 to April 1.

Buoy shifting.

Captains FARRER, WEBB, and OWEN.—April 6 to 15.

Committee to Falmouth.—To inquire into the loss of the ship "Northern Empire," in so far as the question of pilotage and proper anchorage is concerned, and also into the practice of pilots anchoring vessels so as to impede the Channel and its entrances.

From thence to Bristol and Newport.—To inquire into a complaint made by the Bristol Channel pilots that the Newport pilots continued in charge of vessels out of their district.

Captains BAYLY, BAX, and NISBET.—April 19 to 21.

Buoy shifting.

Captains SHUTTLEWORTH and CLOSE.—April 23 and 24.

Committee to Harwich and Orford.—Left Blackwall with oil and stores for Harwich; inspected light establishments and buoy store; visited light at Langard Fort; landed oil and stores. 24th, proceeded to Orfordness, and inspected establishments; inspected Gunfleet, and returned to Blackwall.

Captains REDMAN, FENWICK, and NISBET.—April 23 to 27.

Committee to the Ramsgate District.—Inspected the Nore Light Vessel; moored in Ramsgate Harbour. 24th, visited the North Sand Head Light Vessel; passed close to and examined the monster buoys outside the Goodwin. Monday, 26th, left Ramsgate for Gull Light Vessel, to assist in clearing her moorings; landed, and visited the North Foreland Lighthouse, the Reading Street and Monekton Beacons, and North Down Tower. 27th, proceeded to the Gull Light, and laid out mooring chain; returned to Ramsgate; took in empty tins; shifted East Tongue Buoy, which was waterlogged, and returned to Blackwall.

Captains WELLER, SHUTTLEWORTH, DREW, and CLOSE (with Captain SULIVAN, of the Board of Trade, and Mr. WALKER, the Corporation's engineer).—April 27 to May 1.

Committee to the Channel Islands, &c.—28th, inspected St. Catherine's Lighthouse, visited the Needles Lighthouse, building, and inspected the Hurst establishments; moored off Cowes, and discharged oil and stores for the district; coaled (here Captain Sullivan and Mr. Walker joined). 29th, proceeded to Alderney; landed, and examined the outer and inner Hanois; proceeded to Guernsey; anchored, landed, and made inquiries respecting the tides, &c. 30th, proceeded to Jersey, but in consequence of bad weather bore up for Alderney, and there landed stores for the Casquets; proceeded to Cowes, received the empty tins, and on 1st May returned to Blackwall.

Rear-Admiral GORDON and Captain REDMAN.—April to North Foreland and Reading Street Beacon.

Captains BAYLY and FENWICK.—May 4 and 5.

Relief duty.

Captains BAYLY and WERE.—May 6 to 10.

Shifting the Swin Middle Light Vessel.

Rear-Admiral GORDON, Captains BAX, REDMAN, CLOSE, and NISBET (Captain SULIVAN, of the Board of Trade, with the Committee).—May 12 to 20.

Committee to St. Abb's Head.—13th, in Whitby Harbour. 14th, landed the lantern work for the new lighthouses, and inspected the buildings. 15th, proceeded to the northward, and made fast to a buoy near to Berwick Harbour. Monday, 17th, stood out and joined the Northern Lights vessel "Pharos," off St. Abb's Head; landed on the north side, and walked to the head, accompanied by three of the Commissioners and Mr. Stevenson, and selected a site

CONSTITUTION OF GENERAL AUTHORITY, &c.

VIII.

for a lighthouse on a projecting head; returned on board, and proceeded southward; visited and delivered oil and stores at the Ferns and Coquet. 18th, coaled at Hartlepool. 19th, to the southward, blowing hard; anchored off the Haisbro' Lighthouses. 20th, at Blackwall.

Captains SHUTTLEWORTH, PINLEY, WERE, FENWICK, and BAYLY.—May 20 and 21.

To remove the Girdler Light Vessel, examine Receiver, and report on new buoy.

Captains FARRER and WEBB.—May 20 to 22.

Committee to Rye, Dover, Deal, and Ramsgate.—Inspected the pilot cutter building at Rye; proceeded for Dover. 21st, inspected the new boats building, the store, "look out" tower, and the pilots on shore; proceeded to the office, and inspected the books, &c.; left for Deal, and inspected the pilots on shore, the "look out" house, &c.; attended at the office, and inspected the books; examined the sails, &c., for the cutter; proceeded for Ramsgate. 22d, inspected pilots, &c., and returned to London.

Captains SHUTTLEWORTH, FENWICK, BAYLY, and NISBET.—May 25 to 29.

Committee to the Westward.—Replaced the West Girdler Buoy, and put a new cage on the "Royal Sovereign" Buoy; landed oil and stores at Beachy Head, Portland, Casquets, and at Ramsgate, and brought away the empty tins, &c.; visited and inspected Dungeness and South Foreland, and returned to Blackwall on the 29th.

Captains WERE and WELLER.—June 2 to 5.

Relief duty.

Captains REDMAN and PINLEY, Rear-Admiral GORDON and Captain FENWICK.—June 9 to 16.

Committee to the Westward.—When off South Foreland a thick fog came on; returned, and anchored in the Downs. 10th, proceeded to Cowes; anchored, and landed stores; visited Needles new lighthouse, and anchored in Totland Bay. 11th, anchored off the Start; landed stores, and inspected the establishment. 12th, anchored off St. Agnes; landed stores, and inspected establishment; landed at the Bishop, and inspected the lighthouse. Monday, 14th, left St. Mary's Sound; visited the Seven Stones; unable to land at Sennen Cove and Godrevy; Longships telegraphed "all well;" landed Longships' stores at Penzance; left there, and anchored in the cove of Landerwednock; landed stores with much difficulty; inspected the Lizard establishment. 15th, coaled at Plymouth; put stores on board the tender; stopped off the Eddystone; took in the empty tins at the Start; arrived at Blackwall on the 16th.

Captains BAYLY, BAX, and PELLY.—June 17 and 18.

Committee to Harwich and Beach End.—Anchored abreast of Langard Fort. 18th, landed at Beach End; took angles, &c. at high and low water; sounded about Beach End buoy, and removed same into proper position; landed at Harwich; inspected tender; had an interview with Colonel Wulff, relative to erection of buildings at Beach End; proceeded; removed Girdler buoy into proper position, and arrived at Blackwall.

Captains CLOSE, WEBB, and NISBET.—June 9 to 23.

Committee to the Bristol Channel.—Weather thick and foggy; anchored for the night under Dungeness. 10th, proceeded, and anchored at Plymouth. 11th, coaled, and proceeded; stopped at the Longships; inspected lighthouse; made several experiments with lamp and reflectors, with a view to mark the Rundestone; bore up for Godrevy; inspected light vessel; landed on the island, and inspected building; anchored in St. Ives Bay; landed keepers' furniture, &c. 12th, proceeded to Trevoze; landed stores, and inspected establishment; proceeded to Landy; landed stores, and inspected establishment; pro-

ENGLAND.

ceeded to Caldy; landed stores, and inspected the establishment; anchored off Tenby. Monday, 14th, sea too high to land at South Bishop; bore up for Dale Roads; landed stores at St. Ann's; visited establishment; proceeded to Nayland; selected a position for the moorings of coal hulk, &c.; landed, and selected place for store; anchored at Milford. 15th, weighed for Bristol Channel; weather becoming thick, with a fresh gale, anchored at Dale; took on board empty tins, and returned to Milford to coal; had an interview with solicitor to Colonel Greville, respecting the sale of the land at Milford. 16th, proceeded to Caldy; took in empty tins; supplied and inspected Helwicks Light Vessel; too much sea on to land at the Nash; proceeded to Flatholm; landed stores, and inspected establishment. 18th, proceeded to the Avon; examined Monkstone Rock; inspected the road at the Avon. 19th, visited Burnham and Usk; anchored, and coaled in Penarth Roads. 20th, inspected the "Satellite" tender, and proceeded; landed stores, received empty tins, and inspected the Nash establishment; proceeded to Bidford, inspected the establishment, and landed stores; proceeded to Lundy for empty tins; visited the north end of the island, to consider site for Fog signal; steamed close past the Longships, and examined effect of experimental lamp, &c. 21st, Sunday, anchored off Ryde. 22nd, proceeded, and anchored below Gravesend. 23d, at Blackwall.

Captains BAYLY, WERE, and DREW.—June 24 to 26.

Committee to Sea Reach and Canvey Island.—Anchored, and landed spars for the purpose of enlarging the beacon on Canvey Island. 25th, landed carpenters and seamen on the island; proceeded to Southend, and landed the second officer to attend the tide gauge; sounded in the channel, and took angles where necessary; proceeded for the Reculvers; landed stores, and returned to Sheerness; landed, and inspected the beacon. 26th, landed mechanics to finish the beacon; snaked the channel between the River Middle and Yantlett Shoal; proceeded to River Middle buoy to test appearance of beacon, and returned to Blackwall.

Captains REDMAN and CLOSE (with Professor FAIRBAY).—July 7.

Committee to Birmingham, to inspect apparatus for Whitty Lights at Messrs. Chance's works.

Captain BAYLY.—July 7 to 9.

Relief duty.

Captain BAYLY.—July 14.

Replacing the Nore Light Vessel.

Captains BAX, REDMAN, SHUTTLEWORTH, CLOSE, and NISBET.—July 14 to 24.

Committee of Inspection to Scilly and St. George's Channel.—Stopped at the Nore, and again abreast of the South Foreland, and observed relative power of dioptric and catoptric lights. 15th, called at Cowes; proceeded for Totland Bay; delivered lantern for Needles into "Tortoise" lighter; inspected Needles workshops; proceeded; thick fog off the Start. 16th, anchored in 13 fathoms; weather cleared, and proceeded; coaled at Mill Bay; proceeded for St. Mary's, Scilly, and landed apparatus for the "Bishop." 17th, delivered stores; weighed, and steamed round the "Bishop," but unable to land; proceeded for Milford; arrived there at 9:10 P.M. 19th, landed stores, and took in apparatus for improvement of South Bishop; landed at the Snalls; inspected the Pile Lighthouse and the Stone Tower building; steered for the dépôt at Solva, to land a heavy iron door for the tower; visited South Bishop, but were unable to land the apparatus; anchored in Figsward Bay. 20th, steered for Aberdovey; were unable to land; recommended alteration in beacon; inspected Bardsey; an-

II.

chored in Holyhead Harbour. 21st, visited buoy store; arranged with Captain Priest to take charge of signal gun; visited South Stack; inspected new dwellings; visited Rhoscollyn Beacon and Skerries Lighthouse; landed stores, anchored in Menai Straits. 22d, Menai Lighthouse inspected; stores landed; anchored in Bangor Roads; proceeded for Point of Air; Pile Lighthouse visited, and supplied with oil and stores; attention called to insufficiency of fog bell; dwellings visited; anchored in Hoyle Roads. 23d, landed at Millree Island; inspected buoy store and dwelling; anchored in Douglass Roads; buoy store visited; Bahama Bank Light Vessel visited; anchored in Whitehaven Roads; St. Bees Lighthouse and dwellings inspected. 24th, disembarked, and ordered steam vessel to return to Milford.

Captains BAYLY and DREW.—July 22 to 24.

Shifting the St. Nicholas Light Vessel.

Captains BAYLY, WEBB, WERE, and FENWICK.—August 3 to 5.

On relief duty.

Rear-Admiral GORDON, Captains BAX, REDMAN, OWEN, PIGOTT, and DREW.—August 3 to 13.

Committee to Cherbourg and Antwerp.—In attendance on Her Majesty, in conformity with ancient custom, and in accordance with the wish of H.R.H. the Master. 3d, left for Southampton; anchored off Osborne. 4th, Captain Pigott returned to town, being unwell. The "Irene" was directed to follow Her Majesty, the other vessels being ordered in advance; proceeded for Cherbourg. 6th, returned to Osborne Roads; Captain Denman communicated Her Majesty's pleasure that the "Irene" should accompany the "Victoria and Albert" on the 10th; proceeded to the eastward, and anchored in the Park. 7th, arrived at Blackwall. Monday, 9th, the Committee met on board at Blackwall (except Captain Redman, unwell). 10th, proceeded to Gravesend; joined the squadron, and left for the Scheldt; anchored off Flushing. 11th, proceeded up the Scheldt, and anchored off Antwerp; Her Majesty's pleasure was intimated that the "Irene" should be in readiness to accompany the "Victoria and Albert" on the return voyage on the 30th. 12th, anchored off Flushing. 13th, proceeded; replaced the cage of the East Blyth buoy, which had been fouled, and arrived at Blackwall.

Captain CLOSE, with Mr. BURGESS, C.E.—August 5 to 7.

To Lundy Island, to inspect the damage done to the lighthouse by lightning.

Captain BAYLY.—August 6.

To the West Blyth.

Captains CLOSE, PINXLEY, BAYLY, and NISBET.—August 11 to 21.

Committee to the East Coast.—When off Orfordness, commenced a comparison of the two lights; anchored in Yarmouth Roads. 12th, inspected the St. Nicholas Light Vessel, and put stores on board; proceeded to the Protector Shoal to place a buoy, but found the weather too hazy; anchored off Bridlington, and landed stores; inspected lighthouse at Flambrø Head; proceeded, and, being foggy, anchored off Kettleness. 13th, landed stores, &c., and inspected Tinnmouth Lighthouse and dwellings; coaled at Shields. 14th, landed chains and a buoy, and inspected the store at Seaton; visited the beacon on the Bran Sand, and the buoys; landed, and inspected the lighthouses building at Whitty, and anchored off Scarborough. Monday, 16th, discovered the buoy off Filey Brig to be out of place; took bearings, &c.; landed at Flambrø Head, to inspect the gate and road; took on board empty tins at Bridlington; laid the buoy on the Protector Shoal, and anchored in Hawk Roads. 17th, landed stores, and inspected the

Circular I.
Question VIII.

Spurn lighthouses and groynes : took on board empty tins, and inspected the Spurn Light Vessel ; steered for the Protector Shoal, to verify the angles : found it to be too lazy ; inspected the Lynn Well Light Vessel ; anchored off Hunstanton ; landed, and inspected the establishment. 18th, anchored alongside the Protector buoy ; verified the marks, &c. ; inspected the Dudgeon Light Vessel ; anchored off Cromer ; visited the lighthouse ; inspected the Haibro' establishment. 19th, visited the Haibro', Leman and Ower, and Newarp light vessels ; examined into the circumstances of the loss of the carpenter of the latter vessel, and into the subject of the Leman parting from her moorings ; anchored at Winterton, and inspected the establishment ; landed at Yarmouth ; visited the store, &c. 20th, visited the St. Nicholas and Stanford light vessels ; landed at Lowestoft, and inspected establishments ; landed at Pakefield, to investigate obstruction to the light ; anchored at Harwich, and visited the lighthouses. 21st, strong breeze ; unable to visit the Gunfleet ; arrived at Blackwall.

Captains WERE and FENWICK.—August 17 to 24.

Committee to "Pakefield Gat."—Anchored near the Cork Light. 18th, proceeded to the North Barnard buoy ; sounded through the Gatway to the southward ; snaked across the channel ; moved the South Newcome buoy ; placed a new buoy, to be called the S.W. Newcome ; landed at Pakefield, to adjust the light for the Gatway ; returned, and anchored in the Gatway, to try the light ; landed to effect a little alteration, and again returned to the Gatway. 19th, landed again, to inspect the light ; proceeded for Orfordness ; sounded at the Sizewell Bank and at Aldbro' Ridge ; moved the buoy ; sounded about the Napes, and snaked across it ; found the N.E. Whiting buoy out of position ; gave instructions for its alteration ; sounded about the heads of the Sand, and on the S.W. Bawdsey, over the Kettlebottom, and on to the S.W. Shipwash ; repainted the latter buoy, and entered Harwich Harbour. 20th, visited the Shipwash Light Vessel ; too much sea to get correct soundings ; sounded inside the Shipwash to the middle buoy, and bore up for the Wallet ; anchored at the entrance of the Colne : weather clearing, proceeded for the Blackwater, and anchored near Osy Isle. 21st, proceeded down the river ; passed between the Eagle and Knowle, and through the Swin Spitway ; sounded about and over the middle on the Heaps ; a heavy sea getting up, anchored in the Whitaker Channel ; proceeded for Harwich Harbour. Monday, 23d, proceeded, and examined the West Rocks and Gunfleet ; proceeded up the Medway ; turned in Limehouse Reach, observing marks, and passed Garrison Point, down over the Flat of the Cant, through the five fathom and about the Ooze and Nob channels : past the East Spaniard, across to the Gillman, Shivering Sand, and through the Nobs ; passed the East Ooze, and anchored to the westward of the River Middle buoy, and arrived at Blackwall on the 24th.

Captains BAX and DREW.—August 25 to 28.

Shifting the St. Nicholas Light Vessel.

Captains BAX, CLOSE, WEBB, and NISBET.—August 27 to 31.

Committee to and from Antwerp.—In attendance on Her Majesty. Left Blackwall, and anchored at Antwerp the same day ; reported arrival on board Royal yacht. On the 30th Her Majesty the Queen embarked on board the Royal yacht, the "Irene," proceeded down the Scheldt, and brought up about six miles above Flushing. Proceeded to Flushing, to land a Queen's messenger, and returned with him to the Royal yacht. 31st, sent "Irene's" pilot on

board Royal yacht, and stood down the Scheldt in company ; anchored in Dover Roads ; her Majesty landed at Dover ; Committee parted company with the Royal yacht, and proceeded for Blackwall.

Captains WELLER, WERE, and BAYLY.—August 31 to September 3.

Committee to the South Channels.—Left Blackwall ; shifted the East Blyth buoy. 1st September, sounded through the Prince's Channel ; shifted the South Girdler buoy ; sounded over the Girdler Spit, and moved the buoy ; sounded in the Queen's and Horse channels. 2nd, sounded through the Gulls and over the South Brake and Bunt Head, and shifted the South Brake buoy. 3d, the weather too unsettled to get soundings outside the Goodwin Sands ; proceeded for Blackwall.

Captains WELLER, REDMAN, OWEN (up to the 15th), SHUTTLEWORTH, DREW, and BAYLY.—September 9 to 17.

Committee to the Westward, and to observe and report upon the comparative practical advantages which the dioptric and catoptric systems of illuminations present in those stations where they are placed in immediate juxtaposition.—Left Blackwall ; proceeded to the South Foreland, and commenced observations on the lights ; took angles, &c. ; endeavoured to compare Beachy Head and Grinsez, but the state of the atmosphere prevented seeing clearly. 10th, made fast to the buoy in Cowes Roads ; delivered stores for the new Needles light ; coaled in Mill Bay. 11th, visited St. Anthony's Lighthouse ; tested the position of the beacons off the Rundlestone ; unable to land at the Longships or Sennen Cove ; anchored at St. Ives ; inspected Mr. Herbert's monster beacon. 13th, landed, and inspected the tower, &c., on Godrevy Island ; inspected the Godrevy Light Vessel ; unable to land at the Longships ; visited the storehouse, &c. at Sennen Cove ; proceeded for Scilly ; inspected the Bishop Lighthouse ; visited the dwellings at St. Mary's. 14th, inspected St. Agnes Lighthouse ; visited Mr. Augustus Smith, for the purpose of arranging the terms, &c. for the occupation of his premises at St. Mary's ; landed a supply of oil and water at the "Bishop." 15th, moored in Mill Bay, and coaled ; visited the Breakwater Lighthouse, and proceeded ; again tried to see Beachy Head and Grinsez lights at the same time, but failed to do so. 16th, anchored in Ramsgate Roads ; steered for Orfordness, and proceeded to make observations on those lights ; proceeded through Holesley Bay, and anchored off the Cork Light Vessel. 17th, weighed, and proceeded southward and arrived at Blackwall.

Captains WERE and NISBET.—September 16 to 18.

Committee to Harwich.—Stopped off the Beach End ; sounded over it, and placed a boat with a light on the Spit, to cut the Landguard Fort and Harwich Lights. 17th, moved the Beach End buoy ; proceeded to Woodbridge Haven, and approved of the new beacons for the new swatchway opening to the northward ; laid a bell buoy near the Maplin Spit ; anchored in the Gore Channel. 18th, proceeded outside the Goodwin Sands, and took soundings ; anchored in St. Margaret's Bay ; visited the South Foreland lighthouses, and proceeded for Blackwall.

Captains WERE, FENWICK, and NISBET.—September 21 to 25.

Committee to Yarmouth.—22d, joined the "Beacon" in the harbour ; too much wind to proceed to sea ; visited the store, &c., and the Newarp Light Vessel under repair. 23d, proceeded out of harbour ; sounded through the Cockle Gatt, round the Scroby, and out Hewitt's Channel, outside the Cross Sand, over the flat of the Newarp, across the Kettlebottom, through the

VIII.

CONSTITUTION OF GENERAL AUTHORITY, &c.

VIII.

east side of the Stanford Channel and Pakefield Gat, and anchored in Lovestoft Roads. 24th, weighed, and sounded over the Inner Shoal, through the west side of the Stanford Channel, and to the southward; anchored at Pakefield near the lighthouse, and visited the light; passed out through the inner channel between the Inner Barnard and Covehithness buoys; at the Sizewell Bank buoy compared Orford low and high lights; stood to the east-north-east about four miles, just dipping the low light, then to the south-west, west and north-west; anchored in Hoseley Bay. 25th, proceeded for Harwich, and returned to London.

Captains REDMAN, BAYLY, and NISBET.—Sept. 28 to October 6.

Committee to Whitby, &c.—Examined Orford lights, with reference to relative value of catoptric and dioptric systems. 29th, laid a wreck buoy near the Dudgeon; anchored in Whitby roads; landed, and visited the new light-houses. 30th, the stores and light-keepers' luggage were landed, and despatched to the light-houses, which were again visited, and instructions given for lighting up on the evening of the following day. 1st October, proceeded for Coquet Island and the Fern Islands; unable to land; blowing very hard; anchored in Skate Roads. October 2d, landed, and inspected the inner and outer Fern Light-houses; inspected the lighthouse and buoy store at Coquet; proceeded, and anchored in Whitby Roads; weighed, and commenced observations on the lights. Monday 4th, landed, and had an interview with the owner respecting the use of a spring of water for the lighthouse establishment; visited the light-houses when lighted; weighed, and stood towards the Whitby Rock buoy, on which a lantern had been placed; took bearings, &c.; made further observations on the lights. 5th, anchored off Haisbro'; inspected the light-houses, &c.; inspected the Winterton; proceeded for Yarmouth; inspected the Newarp Light Vessel, and arrived at Blackwall on the 6th.

Rear-Admiral GORDON, Deputy Master, Captains WELLES, BAX, PIGOTT, and DREW.—From October 13 to 16.

Committee to Harwich.—The weather being thick, anchored off the Gunfleet. 14th, anchored off Orfordness; landed, and examined the lantern of the high light; inspected both establishments; proceeded for Harwich; visited the Cork Light Vessel; sounded round the Beach End; placed two boats to mark the channel; landed, and selected sites for the proposed Dovercourt Lights; proceeded out of harbour to examine position, &c.; anchored inside the Beach End; landed, and fixed upon a spot on the beach for exhibiting a light instead of the one in Langard Fort; brought up off the town. 15th, anchored near the Beach End buoy; boats sounded round the Beach End; stood out past the Andrews, sounding the channel; returned, and again examined the site near Dovercourt; weighed, and proceeded up Swin; observed that the experimental bell buoy near the Maplin had received a blow, and did not work; unshackled it, and moored it astern of the Mouse Light Vessel for the night; anchored off the pier at Margate, and visited the lighthouse. 16th, weighed, and proceeded to the Mouse; took the Bell buoy in tow for Blackwall.

Captains CLOSE, BAYLY, FENWICK, and NISBET.—October 13 to 22.

Committee to the Needles, &c.—Left Blackwall with the lighting apparatus for the Needles Lighthouse and the lantern and apparatus for Godrevy. 14th, anchored in Totland Bay; discharged the lighting apparatus, and proceeded. 15th, anchored in St. Ives Bay; landed the buoys for the Bristol Channel and cases for Godrevy.

16th, too much sea on to land at the Longships; landed and inspected the store and dwellings at Sennen Cove; proceeded to Scilly; anchored in St. Mary's Pool, and commenced landing the plank for the dwellings; inspected the dwellings in process of erection. Monday 18th, and 19th, taking on board the chains, stores, &c. at St. Mary's. 20th, weighed and proceeded; passed inside the Rundlestone; passed the Lizard, and steered for and examined the Manacles; arrived at Millbay, and coaled. 21st, too much sea on to land at the Start; passed Portland; consider it necessary to have a light ship placed on the eastern end of the Shambles; landed at the Needles Lighthouse; arrived at Blackwall on 22d.

Captains WERE and WEBB, October 21 to 23.

Committee to the Horse Channel.—Anchored off the "Girdler." 22d, proceeded down the Prince's Channel for the Horse Channel; dropped a temporary buoy off the South Spit, Margate Sand; placed a tide gauge at the Hook Beacon; sounded, and laid a temporary buoy for the South Margate, which buoy was found out of position; moved it; placed a black buoy close to the Spit of Margate Sand; took angles and bearings; placed a red buoy for the Reculvers buoy; removed the Gore Patch buoy; moored the East Last buoy; replaced the Middle Last buoy; sounded between Margate Hook Beacon and the Reculvers buoy; took angles, &c. 23d, proceeded in the cutter; sounded and took angles, &c. between Margate Hook Beacon and the Reculvers Buoy; after sounding through the Horse Channel, and laying the Middle Last buoy, proceeded up the river to Blackwall.

Captains REDMAN and DREW.—October 21 to 26.

Committee to the Whitby Light-houses.—At Whitby on 22d, and having verified the bearings, and the red shades being completed, made arrangements for their exhibition; proceeded out of harbour in a tug, northward, and examined the appearance of the lights. 23d, visited the light-houses, and the red shades were fitted in the Northern Light-house; in the evening again proceeded in the tug northward to observe the lights. Monday 25th, again visited the light-houses; had an interview with the Harbour Commissioners respecting the pier lights; left Whitby, and arrived in London on the 26th.

Captains DREW and WEBB.—November 3 to 5.

Committee to Deal, &c.—In the evening visited the South Foreland Lighthouse. 4th, attended at Deal, to hear the objections of the pilots to certain proposed regulations. 5th, again visited the South Foreland establishment, to examine progress made for the exhibition of the magneto-electric light.

Captains WERE, FENWICK, and NISBET.—Nov. 9 to 11.

Committee to Stanford Channel.—Proceeded to Lowestoft. 10th, embarked there, and proceeded for the Stanford Channel; sounded through the channel and about the South Holm buoy; moved the East Newcome buoy; sounded in the Pakefield Gat, at the South Newcome and North Barnard buoys; proceeded to Yarmouth. 11th, proceeded through the Cockle Gatway; sounded round the head of the Scroby; sounded over the north end of the Cross Sand and along the eastern edge; proceeded for Yarmouth, and returned to London.

Captain BAYLY.—Nov. 10 to 13.

Shifting the Royal Sovereign buoy.

Captains CLOSE and BAYLY.—Dec 1 to 4.

To the Prince's Channel and Sheerness Middle buoy.

Rear-Admiral GORDON, D.M., Captains WELLES, FARRER, and WERE (with Mr. FARADAY).—Dec. 8 and 9.

ENGLAND.

IX.

RETURN TO REQUISITION, dated 27th May 1859.
QUESTION IX. "Standing Orders for the guidance of Board and Committees."

There are no other standing orders for the guidance of Board and Committees than the regulations described under section 5, as the division of the duties of the Elder Brethren, but the annexed resolutions in regard to fines for non-attendance are submitted for the information of the Commissioners.

P. H. BERTHON,
Secretary.

Trinity House, London,
24th December 1859.

At a General Court held on 7th November 1822 it was on the recommendation of the Special Committee Resolved,—

That each merchant Elder Brother who may be absent at the hour appointed for the meeting of the Courts of the Corporation shall forfeit the sum of forty shillings.

That such Brethren as may be absent on the days and at the hour appointed for the Audit or Accounts shall forfeit the sum of forty shillings.

That such Brethren as may be Members of Committees or Supervisors of the Ballast Office, and are absent on the

								£ 38,235 16 8

REMARKS.

- a Newarp.—No revenue; maintenance chargeable on the tolls collected for the Habaro's Lighthouses. The item for ordinary repairs is unusually large, a sum for repair of damage being included, part of which was reimbursed to the Corporation.
 - Stanford.—No revenue; maintenance chargeable on the tolls collected for the Lowestoft Lighthouses.
 - e Bembridge.—No revenue; maintenance chargeable on the tolls collected for the Sunk lightvessel.
 - d Gull.—No revenue; maintenance chargeable on the tolls collected for the Goodwin lightvessel.
 - e Bembridge.—No revenue; formerly maintained by the Admiralty; transferred to the Trinity House under 6 & 7 Will. IV. cap. 79.
 - f Bahama Bank.—The sum for ordinary repairs is larger than usual, owing to a portion of the moorings having been renewed.
 - g Warner.—No revenue; 50*l.* per annum paid by the Admiralty for maintenance of the vessel, the wages, &c. of the crew and maintenance of the light being borne by the "Mercantile Marine Fund."
 - A Godrevy.—First exhibited, 21st March 1858.
- Each crew consists of 17 men, except that at the "Seven Stones," which consists of 17 men.

XII, XIII.

XII. MODE OF AUDIT.

The finances of the Trinity House are administered by the Court itself, details being delegated to committees for the department to which they belong, and each item of receipt and expenditure examined by the Board at an audit held four times a year.

The cash book is balanced monthly, and checked by the rental warden, who takes care that each item of revenue advised is accounted for, and that every disbursement is properly vouched. The rental warden examines the state of cash every week, and reports the same to the wardens in committee.

At an audit of accounts held quarterly, the Deputy Master reads each item from the cash book to the Elder Brethren, who have the books of detail and check distributed amongst them, and who read in reply from their respective books each item so called, before the Deputy Master proceeds to the next.

The principle of payment is, that no sum, however small, shall be disbursed without an order of the Court or a voucher bearing the written authority of an Elder Brother for the payment, such Elder Brother either being the chairman or acting for the Chairman of the Committee under whose sanction the expenses were incurred.

The modes of payment are,—

1. By cheque on the Bank of England.
2. By cashier at the Trinity House.
3. By district or local agent at the outports.

Cheques on the Bank of England are signed first by the rental warden, who examines the vouchers and requires that every voucher shall be signed by the Chairman of a Committee, and countersigned by the accountant, except in copies of orders of Court, which are signed by the secretary. The cheque is afterwards signed by another warden, and, when issued, is signed by the secretary or assistant secretary. Each cheque must be signed by two wardens, and countersigned by the secretary or assistant secretary.

Cash payments are made only by the secretary or assistant secretary, to whom the rental warden advances from time to time such sums as they require to meet small disbursements. They are governed by the same rule as the rental warden as to vouchers and signatures, and their accounts are made up and balanced at the end of each month, and examined by the rental warden.

Agents at outports pay all local expenses of the light, &c. establishments, such as wages, boat hire, small repairs, superannuations, &c. All expenses incurred and disbursements made by them must first be sanctioned by the Board, either by general order, as wages, rents, superannuations, &c., or by special authority, such as repairs and supplies.

Stores and supplies are procured by contract publicly competed for.

The Board of Trade require all Specifications to be submitted to them before tenders are invited, and also to have such tenders before them previously to their acceptance.

P. H. BERTHON,
Secretary.

Trinity House, London,
7th January, 1860.

XIII.

XIII.

RETURN TO REQUISITION dated 10th June 1859.

1. DETAILED ACCOUNT of the System employed in conducting the Financial Department of the Establishment, showing how and where the Monies received for Lights, Buoys, and Beacons are retained pending the process of final deposit, and also mode adopted for obtaining and disbursing the necessary Monies for the current and ordinary Expenses of the Establishment, and for meeting the Bills due under Building and other Contracts, as well as for the regular Maintenance of Lights, Buoys, and Beacons.

The financial business of the establishment is conducted under the direct personal supervision of the senior or rental warden, who reports every week to the wardens' committee

XIII.

the previous week's receipt, expenditure, and balance in hand. The mode of examination and check is described at length in the paper headed "Mode of Audit."

The account of monies received for lighthouse, &c. revenue is kept distinct from that of monies disbursed for expenses, though both are kept in one account at the Bank of England, the only payments out of revenue monies being those to the paymaster general.

All revenue from lighthouse, &c. tolls is remitted by the collectors at London and outports either direct to the Bank of England to the account of the "Trinity House, London, Public Account," or by draft on a London Banker, which is paid into the bank, to be collected when mature. Each collector remits at stated periods (those at London and Liverpool daily, others weekly, monthly, or quarterly, according to the average collection at the respective ports), and renders an account quarterly in detail, showing the amount collected from each vessel, the total agreeing with the amount remitted. These accounts are examined in detail, each vessel being checked by the Table of Light Duties, and any error, surplus or minus, is referred to the collector for correction.

So soon as a sufficient sum is accumulated at the Bank, the rental warden reports the same to the wardens' committee, and an amount of 10,000*l.* or 12,000*l.* is ordered to be paid over to Her Majesty's paymaster general, a request for authority to do so being first sent to the Board of Trade.

The account of gross revenue is made up quarterly, submitted to the wardens' committee, signed by the deputy master and two wardens, and rendered to the Board of Trade; the balance shown by such account is ordered to be paid in to the paymaster general, as above described.

The revenue is paid in gross, deducting only repayments of duties. The commission on collection is paid and charged as a disbursement.

The necessary monies for the current and ordinary expenses of the establishment, and for meeting the bills due under building and other contracts, as well as for the regular maintenance of lights, buoys, and beacons, are obtained by imprest from the paymaster general, with the authority of the Board of Trade, in sums varying in amount as the need occurs. The imprest is requested by the committee of wardens on the rental warden's report of the state of cash.

The amount of imprest is placed by the paymaster general to the credit of the "Trinity House, London, Public Account," at the Bank of England, and is applied in cash payments to tradesmen in London, and to the establishment expenses, and in remittances to district or local agents and builders, and other large contractors for works at the outports. The mode of disbursement by cheque, &c., and the authority required for each payment, is detailed in the paper headed "Mode of Audit."

Remittances to district superintendents and local agents are made periodically, of regular amounts fixed on by the Board sufficient for the current ordinary expenditure of each district or agency, such as wages, rents, &c. Each agent transmits quarterly an account with receipts and vouchers for the disbursements made, and submits bills incurred in the period for approval, for which, after being submitted to a committee, remittance is made of the amount required for payment.

All repairs, supplies, and requisite disbursements are submitted to and approved by the committee to whose department they relate, before being incurred, and when completed the bills are checked with the orders, signed by the receiver or superintendent and submitted to the committee before payment.

The detailed account of disbursement is made up quarterly, showing all the charges paid in the quarter for which it is rendered; it is submitted to the wardens' committee, signed by the deputy master and two wardens, and transmitted with the vouchers to the Board of Trade.

P. H. BERTHON, Secretary.

The Clerks in the Ballast Office are under the same Order in Council as that which regulates the Department of Lights, Buoys, and Beacons, and promotions or transfers from one to the other are common to both.

In addition to the foregoing a Temporary Clerk has been found necessary in the Collection Account Office.

Trinity House, London, 18th April 1860.

P. H. BERTHOE, Secretary.

XV.

RETURN TO REQUISITION, dated 10th June, 1859.

QUESTION 3.—“System of nomination of all officers connected with the Light, Buoy, and Beacon Departments of the Trinity House, system and subjects of examination (if any) previous to appointment and names of examiners.”

Official Establishment.

“Regulations for the nomination and examination of candidates for appointment to the official establishment of the corporation” are as follows:—

Nomination of Candidates.—First.—That on the occurrence of a vacancy in the official establishment, there shall be five candidates nominated for competitive examination, as herein-after provided.

Secondly.—That the deputy master shall have the right of nominating two of the said five candidates, the remaining three being nominated by the Elder Brethren in turn, according to seniority of election.

Thirdly.—That the age of eligibility for nomination as a candidate shall not exceed 20 years, nor be under 16½ years.

Examination of Candidates.—Fourthly.—That the competitive examinations herein-before provided shall be con-

XV.

ducted by the secretary and accountant under the immediate direction of the deputy master and wardens, by whom the examination papers shall be previously approved.

Fifthly.—That the said committee of deputy master and wardens shall receive the report of the secretary and accountant on the completion of each examination, and shall submit the same to the court or board, as the case may be, with their recommendation thereon.

Sixthly.—That in the event of its being shown by the result of any such examination, that a candidate is so far deficient in his knowledge of the several subjects on which he has been examined, as to render it improbable that he will become within a reasonable period of time qualified for appointment as a clerk on the establishment, the same shall be stated by the committee in their report, and such candidate shall not be eligible for nomination on any subsequent vacancy.

The subjects of examination are correspondence, dictation, arithmetic, geography, French translation.

At the commencement of the proceedings the name of each candidate is placed in an envelope, which is sealed and marked with a distinguishing letter, the same letter being also affixed to his papers. The committee have the papers before them when the report of the examiners is considered,

ENGLAND.

CONSTITUTION OF GENERAL AUTHORITY, &c.

*Lighthouse Service.*Circular I.
Question
XV.

and forward them to the board with their recommendation, without knowledge of the name of the candidate they approve. After the board have finally determined on the selection to be made, the corresponding envelope is opened, and the name of the successful competitor becomes known. Each candidate is required to produce certificates of his age, of his being of sound health, and of character from his last schoolmaster or employer.

Steam and Sailing Vessel Service.

Seamen under 35 years of age who can furnish certificates of good character are selected by the light committee, and, if approved, are appointed by the board. Apprentices are taken by the Corporation for seven years, and should their conduct prove satisfactory throughout that term, and they desire to remain in the service, preference is given to them for appointment as second mates. Both mates and masters undergo strict examination in pilotage and navigation by the examining committee. Superintendents of districts are generally selected from this service.

Candidates for admission are nominated by the Elder Brethren in turn, and if they can produce satisfactory certificates of age (which must be under 28 years), qualification, character, health, and previous occupation, they are recommended by the light committee for appointment to the board. These men are subjected to a course of preliminary instruction whilst supernumeraries at Blackwall.

Light Vessel Service.

Seamen under 28 years of age, who can furnish certificates of good character, are selected by the light committee, and appointed by the board. The inferior officers (lamp-lighters) are chosen from such men in this class as can read and write, and are further promoted, upon good conduct and as vacancies occur, to be mates and masters, undergoing for these latter offices a special examination as to their knowledge of the locality in which the light vessel is stationed.

RETURN TO REQUISITION, dated 17th June, 1859.

"The Names of all Lighthouse Keepers and Masters of Floating Lights appointed since the 1st January 1854, the Date of their Appointment, their Ages at the time of their Appointment, their previous Professions or Employments, their actual Employments when appointed, by whom they were selected, and the mode of Examination (if any), and of testing their Qualifications."

Name.	Date of Appointment.	Age at time of Appointment.	Previous Profession or Employment.	Actual Employment, when appointed, by whom selected, and mode of Examination, &c.
Nutsford, Henry	1854. 20 Mar.	24	Joiner and Cabinet Maker.	Nominations by Elder Brethren in turn, recommendations by light committee in event of certificates, &c. proving satisfactory, for appointment by the Board. Certificates of age (which must now be under 28 years), qualification, character, health, and previous occupation are required. These men are subjected to a course of preliminary instruction without superannuation at Blackwall. * That the same construction of the "Bounty," and at their counterpart were appointed keepers there—the regulation as to age being waived in their favour.
Howard, Fredk. Saml.	20 July	30	Joiner.	
Lewis, William	20 Sept.	30	Blacksmith.	
Williams, Thomas	11 Oct.	25	Labourer.	
(has since left the service)				
Davis, William	21 Nov.	31	Seaman in Corporation's Service.	
	1855.			
Tough, George	20 "	22	Domestic Servant.	
Hollord, Henry	26 "	23	Butcher.	
(too longer in service)				
Bowen, William	3 April	25	Shipwright.	
Shoemack, Francis	28 "	20	Farmer's Labourer.	
Odgers, John	30 July	22	Coastguard.	
Boyle, Owen	15 Oct.	23	Bricklayer.	
	1856.			
Griffiths, John	22 Jan.	26	Painter.	
Davison, Mark Jos.	28 "	29	Painter.	
Frost, William	" "	27	Cabinet Maker.	
Evans, William	" "	25	Domestic Servant.	
Briggs, David	14 Oct.	39	Ditto.	
Russell, Amos	28 "	30	Gardener.	
	1857.			
Eritton, William	7 April	20	Ditto.	
May, Alfred Brombley	25 June	24	Mariner.	
Evans, William	11 Aug.	25	Joiner.	
Godolphin, Walter Sydney	8 Sept.	24	Brush Maker.	
Appleton, Geo. Gershon	" "	26	Painter.	
Ebden, William	6 Oct.	16	Baker.	
	1858.			
Watson, John Henry	26 Jan.	19	Painter.	
Lancelot, Thomas	21 May	24	Domestic Servant.	
Dowes, William	8 June	27	Ditto.	
(has since left the service)				
Boyce, Wm. Henry	15 June	27	Clerk in a Broker's Office.	
Williams, John*	26 July	35	Mason.	
Williams, Thos. Henry	" "	35	Blason.	
Cutting, Thos. Henry	24 Aug.	21	Clerk in a Lawyer's Office.	
Steer, Joseph	2 Sept.	27	Boot and Shoe Maker.	
Hilder, Edward	14 "	20	Shoemaker and Grocer.	
Mayor, Samuel	30 "	23	Saddlemaker.	
Spurr, Frederick	28 Oct.	25	Watch and Clock Maker.	
Hood, Charles	20 Nov.	25	Labourer.	
	1859.			
Warder, Geo. H.	7 Jan.	22	Assisting his father, a Light-keeper.	
John, Chas. Felix	23 Feb.	25	Biscuit Baker.	
Jarvis, John	24 "	19	Domestic Servant.	
Staples, George	24 "	23	Wine Porter, &c.	
Davis, Wm. Legg	3 Mar.	21	Mariner.	
Burgess, Wm. R.	8 "	20	Cooper	
Williams, Richard	1 June	27	Domestic Servant.	
Annett, David	3 Nov.	23	Timms, &c.	
Ricketts, E. J.	24 "	20	Tailor.	
	1860.			
Norton, H. R.	3 Feb.	27	Cabinet Maker.	
Dale, William	11 "	27	Mariner.	
Claxton, R. H.	3 April	18	Domestic Servant.	
Dyer, Saml. E.	7 "	24	Plumber and Pipe-plate Worker.	
Aveston, C. H.	17 "	18	Assisting his father, a Light-keeper.	

Masters of Lightvessels.

Name.	Date of Appointment.	Age at time of Appointment.	Previous Profession or Employment.	Actual Employment when appointed.	By whom selected, and mode of Examination, &c.
Sidney, John	1854. 20 June	61	Lightves- sel service of Corporation.	Mate of Goodwin lightvessel.	By light committee, from inferior grade to an inferior grade, but no previous actual examination made as to their knowledge of the theory in which the lightvessel is placed.
Wright, Edw.	" "	49	"	" Sunk light- vessel.	
Collins, George	26 Sept.	66	"	" Spurn light- vessel.	
Freeman, John	1855. 2 Jan.	48	"	" Helwicks lightvessel.	
Mathewson, Jas.	2 Oct.	47	"	" Swin (Middle) lightvessel.	
Murray, William	1857. 3 Feb.	59	"	" South Sand Head light- vessel.	
White, Thomas	21 July	47	"	" St. Nicholas gatt light- vessel.	
Dale, John	22 Sept.	59	"	" Shipwash lightvessel.	
Hast, William	24 Nov.	42	"	" Shipwash lightvessel.	
	1858.				
Maskell, John	16 Mar.	45	"	" Cork light- vessel.	
Temple, Jas. T.	26 Oct.	48	"	" Seven Stones lightvessel.	
Boxhall, Jas.	1859. 5 April	42	"	" English and Welch Grounds light vessel.	
Barnard, Rob.	2 Aug.	50	"	" Cockle light- vessel.	
Smith, Charles	" "	59	"	" Stanford light- vessel.	
Hall, Henry	" "	50	"	" Owers light- vessel.	
Proom, Robert	16 "	46	"	" Sunk light- vessel.	
Cooper, James	11 Oct.	44	"	" Leman and Ower light- vessel.	
	1860.				
Rees, Joseph	3 April	48	"	" Tongue lightvessel.	

Trinity House, London,
18th April, 1860.

P. H. BERTHOE,
Secretary.

XXVI.

PROPOSED IMPROVEMENTS, INVENTIONS, &c.

XXVI.

XXVI.

A RETURN showing the NUMBER and DESCRIPTION of PROPOSALS or SUGGESTIONS originating with or made to the ELDER BROTHERS of the TRINITY HOUSE, with a View to the Improvement of the System of Lights, Lighthouses, and Floating Lights, or to the Improvement of the System of Lighting the Coasts, Harbours, and Channels under their Jurisdiction, since the 1st January 1845, with a Statement of the Steps taken in each Case, in conformity with a Requisition from the Royal Commission on Lights, Buoys, and Beacons, dated 24th February 1859.

Section.—Proposals relative to the Nature of Light, or the Materials for producing it, &c.

1845.—By order of Board. The attention of the Corporation had been drawn to rapeseed oil as a substitute for spermaceti oil, and trials of its qualities, with the object of introducing it into use at the

lighthouses and lightvessels, had been made (in 1842) prior to the sitting of a select committee of the House of Commons in 1845, by whom a continuance of the experiments was recommended.

1845, July.—Special Committee appointed to test Messrs. Briggs' patent refined rapeseed oil. They report that it justifies expectation of economical and otherwise advantageous use.

ENGLAND.
Circular I.
Question
XXVI.

XXVI.

August.—Reference had to Professor Faraday, who reports favourably both of the oil and of a patent lamp by Messrs. Wilkins.

Three of Wilkins' patent lamps fitted at North Foreland.

Superintendent reports, and states consumption.

14th October.—Report from Mr. Faraday.

28th October.—Further in relation thereto.

1846, January.—Further reports from superintendent.

July.—Mr. Faraday adjusts smoke tube to the lamp.

August.—Order of House of Commons to know whether we have adopted recommendation of Select Committee, and what saving of expense has accrued.

(The return to this order was dated 26th January 1847.)

Member of Board suggests trial at Winterton; trial made there, and at Haisbro' and Caskets.

November.—The watch on board Cockle and Newarp lightvessels concur that Winterton is neither so bright nor so strong since the change.

Agent to make inquiry as to management.

The objection to this lamp consisted in the narrowness of the flame, owing to the form of the chimney, and the consequent limitation of divergence.

1847, January.—Mr. George Herbert, Trinity House. To introduce a lamp invented by him, suitable for burning rapeseed oil instead of sperm.

1847, January.—Referred to light committee, who think it should be investigated. Copy of proposal sent to Mr. Faraday with lamp.

March.—Report received from Mr. Faraday.

Further report from Mr. Faraday on same lamp, when fitted with a central deflector.

This lamp (without the deflector) was universally adopted at the catoptric stations in the course of the same year.

1848.—Mr. Herbert applied for remuneration; 200*l.* granted.

1849, January.—Mr. Herbert, for further allowance in consideration of great saving that has accrued.

February.—Declined.

1853, September.—Mr. Herbert renews application. Not complied with.

1846, January.—W. Nicholson, Universal Gaslight Company, Drury Lane.—To burn gas at the North Foreland or any other station. Will fit apparatus, find fire, fuel, and attendance, for 7*l.* per week.

1846, January.—Acquainted that we have no present intention of using gas in the Corporation's lighthouses.

1847, May.—W. R. Y. Motte. This gentleman appears to have been in semi-official correspondence with the secretary on the subject of a newly-invented light, but without ulterior result.

1847, August.—R. Rettie, C.E., Ham. Has invented a new light for lighthouses; requests to know whether Corporation will undertake trial at cost not exceeding 50*l.* to 80*l.*

1847, August.—Acquainted that Corporation decline to sanction expenditure in testing merits of an invention with the principles of which, and the mode of its application, they are entirely unacquainted.

1848, February.—Messrs. Brotherton. Submitting a patent oil.

1848, February.—Light committee to make trial. Found to be about equal to oil supplied by contractors.

XXVI.

1850.—Messrs. Brotherton desire to tender. Informed that no particular form is needed.

1849, January to May.—Staité's Patent. Electric light. Semi-official correspondence with solicitor to Mr. Staité and to the Patent Electric Light Company, but without result.

1849, August.—Geo. Charlton, Almsperson, Deptford. To exhibit a light produced by a certain vegetable gas ignited in seal and other oils.

1849, August.—Acquainted that Corporation have no occasion for such an invention.

1850, April.—W. Fletcher, Lightkeeper, Burnham Lighthouse. Plan which he thinks will improve Argand lamp, and enable it to burn commoner oil.

1850, April.—Informed that it is not regarded as having anything of novelty in it to induce Board to incur expense.

1850, September.—W. W. Bonney, Fulham. A method of producing and sustaining for a longer period than hitherto a most powerful electric light for use in lighthouses; will prepare model, provided we defray expense, &c.

(Mr. Bonney's plan also included the illumination of buoys, for which see Buoyage and Beaconage Returns.)

1850, September.—Acquainted that Elder Brethren decline to accede to his proposition.

1851, February.—H. Vereker, Ballast Office, Dublin. That dock trustees, Liverpool, use patent burning oil refined from olive oil; that it is found good and reasonable, and inquiring if it has been used by this Board, and found to answer.

1851, February.—Informed that Board has not used the oil to which he adverts, and that olive oil has not been tried in the Corporation's lighthouses.

1852, May.—Mosselman, Borough. Sample of oil which he imports from France; requests permission to tender.

1852, June.—Informed that we have not any occasion for supply of that article.

1852, November.—Dr. J. G. W. Watson, Adelphi. An electric light generated by galvanic battery, and supplied at a cheap rate, on account of the residuum being valuable in the manufacture of colours.

1852, November.—Time to be fixed for viewing, in communication with Dr. Watson and Professor Faraday.

20th December.—Dr. Watson places himself in communication with Mr. Faraday. Mr. Faraday draws up memorandum, as to requirements and tests. Approved by Board. Dr. Watson to be asked if he concurs.

1853, January.—Dr. Watson concurs. Mr. Faraday arranges trial at Trinity House with great lamp of dioptric apparatus, lighted for purposes of comparison.

May.—Deputation from Electric Light and Colour Company received. Will be ready to submit light in about a month. Dr. Watson to communicate with Mr. Faraday, when ready, upon conditions agreed on.

June.—Experiments arranged for third week in July.

August.—Mr. Faraday's report thereon received; the best thanks of the Board returned to him for it.

Dr. Watson informed that essential qualities of simplicity of arrangement and steadiness of action are not sufficiently matured to render its adoption advisable at present time.

XXVI.

1855, May.—Chairman of Electric Light and Colour Company advising that new lamp will be burning for a fortnight at their office. Thanks returned.

September.—Mr. Howe requests to be informed if Dr. Watson's electric is used by the Corporation.

Acquainted that it is not, being considered too complicated.

1854, March.—Board of Trade. Voltaic light:—For information to enable their Lordships to answer question in House of Commons, "Whether any experiments have been made with a view to ascertain whether the mode of producing the voltaic light, recently discovered by the Reverend Dr. Cullen, of Maynooth, can be made available in lighthouses during fogs and snow storms?"

1854, March.—Their Lordships informed that it has not in any manner been brought under our notice; experiments as to electric light, as adopted by another person, prove it not at present practically available.

1854, April.—Chevalier Hähner. An application of the electric light which shall be regularly intermittent.

1854, April.—Placed in communication with Professor Faraday. Not recommended for adoption.

1857, February.—Professor Holmes. Magneto-electric light for lighthouses; requests leave to submit patent process.

1857, February.—Leave granted.

March.—Exhibited at Blackwall, before Deputy Master and committee, with Professor Faraday.

April.—Professor Holmes requests leave to instruct keepers. Is requested to state cost and arrangement for application to lighthouses. The Professor's reply sent to Mr. Faraday, who makes observations thereon.

May.—An agreement made for a trial at South Foreland. Professor Holmes to erect instruments, and conduct trial for two months, for 400*l*.

1858, 8th December.—Commencement of experiments at South Foreland. French lighthouse authorities advised, and requested to favour us with observations from French coast. Three committees of Elder Brethren make observations on consecutive nights. Keepers at neighbouring lighthouses and lightvessels, and crews of pilot cutters, ordered to observe.

15th December.—Professor Holmes asked whether he would like to break off to perfect arrangement, and as to cost, &c.

30th December.—Temporarily discontinued.

1859, February.—Several panels of dioptric lens re-adjusted.

March.—Light resumed, with improved adjustment of lamp. Professor Holmes requests that inspection may be delayed a week.

7th April.—A committee of Elder Brethren observe.

20th April.—Deputy Master and committee, with Professor Faraday, observe.

26th April.—French lighthouse authorities visit.

29th April.—Professor Faraday's report. (Copy transmitted herewith.)

3rd May.—Report of Elder Brethren.

7th May.—Light discontinued, the two months having expired.

12th May.—Observations at Calais transmitted from French authorities, sent to Mr. Faraday, with those from English stations.

Payment made to Professor Holmes of the 400*l*. agreed on.

June.—Information required as to cost.

29th June.—Mr. Cutler, for Professor Holmes, in reply.

XXVI.

July.—Arrangement made for further trial of six months' duration, upon payment of 350*l*., for use of complete apparatus. The management to be entirely in hands of Corporation's servants.

22nd August.—Exhibition resumed.

1858, April.—F. C. Cope, C.E., Frankfort. Calling attention to the illuminating power of a jet of steam thrown upon a strong light. (Addressed to Sir John Pakington, and sent to Trinity House by Board of Trade.)

1858, April.—Referred to Mr. Faraday.

May.—Report received from him to the effect that he is not aware of any principle or method by which steam can be applied with advantage to flame.

Copy sent to Board of Trade, with statement that Elder Brethren fully concur.

1858, June.—Major the Hon. W. E. Fitzmaurice. Oxyhydrogen light (a secret process); requests leave to submit.

1858, June.—Leave given to submit. Elder Brethren, with Mr. Faraday, witness an exhibition at Kensington Gore.

July.—Report from Mr. Faraday. Elder Brethren point out difficulties to Major Fitzmaurice, and propose that he should communicate in confidence with Mr. Faraday.

August.—Major Fitzmaurice agrees.

29th August.—Mr. Faraday's report in consequence.

30th August.—Major Fitzmaurice, stating that trial at Kensington Gore was private, and requesting comparative exhibition with usual light.

31st August.—Major Fitzmaurice proposes delay, on account of private business.

13th December.—Is ready for competitive trial.

21st December.—Letter sent to him pointing out the necessity of his proving it suitable for lighthouse purposes; use of experimental lantern at Blackwall offered to him.

1859, January.—Major Fitzmaurice is prepared for any trial Board may desire. Board order lantern at Blackwall to be placed at his disposal.

April.—Permission given to his agent to inspect lantern at Blackwall. Requests loan of reflector.

August.—Major Fitzmaurice is prepared for trial at Blackwall.

September.—Elder Brethren absent on official duty, trial postponed in consequence.

October.—Lantern at Blackwall placed at his disposal for purposes pointed out to him in December, 1858.

1858, December.—A. II. Renton, Adelphi. Oxyhydrogen light (Prosser's); requests leave to submit.

1858, December.—Leave given to submit. Submitted at Trinity House.

1859, January.—Mr. Renton is ready to exhibit at South Foreland, or elsewhere at his own cost.

Informed that Corporation is already under engagement to try two other systems, and that we regret we cannot at present accede to his request; Mr. Renton stating that he will be ready at any future time.

1859, June.—Professor J. T. Way, Welbeck Street. A new form of electric light, in which use of carbon electrodes is altogether dispensed with; steady, continuous, and uniform, capable of new adaptations for signalling, and less expensive than any other.

1859, 22d June.—Examination made by Deputy Master and Committee at Professor Way's residence. Subsequent inspection by Mr. Faraday.

27th June.—Report from Mr. Faraday.

ENGLAND
Circular I.
Question
XXVI.

ENGLAND.
Circular I.
Question
XXVI.

XXVI.

12th July.—Dr. Way requests opinion as to applicability for lighthouse purposes.

14th July.—Informed that the requirements of his light are not considered applicable to ordinary management at a lighthouse.

18th July.—Dr. Way requests to be informed of precise nature of objections.

21st July.—Is informed of the essential conditions, most of which, we consider, it does not in its present state fulfil.

Section.—Proposals relative to Lighting Apparatus, Glass, &c.

1845, April.—Professor Faraday. That, in reglazing the Eddystone, panes of glass by different manufacturers, properly marked, should be placed in the upper part of the lantern, in order that comparative qualities may be tested by time.

1845.—Suggestion concurred in, and carried into effect.

1845, September.—Captain Love, agent, Isle of Wight district. To line reflectors at Needles with red glass.

1845.—Sent to Mr. Faraday. Report from him. Suggestion not adopted.

1845, October.—Mr. Phelps, principal lightkeeper, Lundy. Model of improved lamp.

1845.—Mr. Wilkins directed to adapt improvement to one of his patent lamps. Twenty-five burners were afterwards fitted in the same way.

1846, October.—J. Smith, New Road. A "new reflecting apparatus, applicable to artificial light."

1846, October.—Committee appointed to call on him and inspect it. Find it to be a small triangular refracting apparatus. Report thereon. Light Committee of opinion that apparatus, in its present state, cannot be made available for the Corporation's service.

1847, February.—Alexr. Gordon, C.E., Fludyer Street. That, in the course of experiments, he has arrived at the certainty of being able to accomplish the following; viz. :—

- 1st. Illumination of buoys and beacons which shall not require attendance more than once in a month or six weeks.
- 2d. Illumination of floating lightvessels in a manner that the light shall be of equal brilliancy in the roughest as in the calmest weather.
- 3d. An entirely new and economical catadioptric arrangement of fixed, revolving, or flashing lights, and such as he would strongly recommend for the lower light at the South Foreland. The appearance from the sea would, in that instance, be similar to the appearance of the present lower light.
- 4th. The production and distribution of sound to indicate the proximity and position of light-houses, lightvessels, beacons, and buoys.

The third of these propositions appears to have been the only one considered at the time.

1847, February.—Read at Board; subject referred to Committee. Deputy Master to confer with Mr. Gordon. Corporation agree to pay for reflector and refractors on his principle, estimated by Messrs. Deville at "not less than 80*l*."

October.—Mr. Gordon reports apparatus nearly complete, and that it answers expectation in every respect. Requests that his partner may examine arrangements at Purfleet Experimental Lighthouse.

December.—Exhibition at Trinity House wit-

nessed by Elder Brethren. 84*l*. for apparatus ordered to be paid.

(A report from Mr. Faraday on this subject was subsequently transmitted to the Trinity House.)

1848, 29th August.—Mr. Gordon informed that trial of his apparatus, as compared with an ordinary Argand lamp and parabolic reflector, will take place at the Buoy Wharf, Blackwall, and be viewed from North Woolwich Station. Requested to pay previous visit to wharf, and inspect arrangements.

30th August.—Mr. Gordon visits wharf. Concludes, from angles marked on frame, that course of observations likely to be made originate in misconception. Will witness exhibition on 31st; but, owing to shortness of time, must delay remarks or suggestions.

31st August.—Experiments made. First Lord of Admiralty and Lord John Hay present.

2d September.—Mr. Gordon asked for remarks or suggestions. Further trial proposed for following Tuesday (5th).

5th September.—Renewed experiments.

6th September.—Mr. Gordon repudiates trials. Will specify what he considers fair, if Board will give him opportunity and means of carrying it out. Services and expenses should be considered, and time paid for.

13th September.—Board consider trials fair and judicious. Are quite ready to receive remarks, but decline to remunerate.

1849, 31st July.—Admiralty request loan of best ordinary reflector, and of Mr. Gordon's apparatus, in order to compare both with reflectors for Cape Pine Light, at Woolwich. Lent to Admiralty. Premises at Blackwall placed at disposal of their officers for observing experiments.

17th August.—Trial made at Woolwich Barracks, and viewed from Rainham.

7th September.—Letter from Mr. Gordon, with copy of letter addressed by him to Admiralty relative to observations made by Admiralty officers at Rainham, wherein he states that smoke from a chimney at Woolwich interfered with just comparison. Proposes to Trinity House to make another trial at Blackwall. Board decline to comply.

1847, March.—J. Napier, Edinburgh. Has a method for improving lighthouse machinery. Requests remittance of 20*l*. to enable him to get machine made.

1847, March.—Acquainted that Elder Brethren decline to comply with his request.

1848, May.—Admiral Owen, Captain Shortland, R.N., and Mr. Hutchinson. Machine invented by Mr. Hutchinson for producing in lighthouses the effect of a revolving light.

1848, May.—Attended and submitted it.

1849, February.—Professor Faraday. An apparatus to enable keepers at dioptric stations to adjust mirrors; and suggestion for lowering outside cases of burners to prevent light being intercepted from lower mirrors.

1849.—Approved. Ordered for Coquet, Hunstanton, Orford Low, South Foreland, Start, Braekwater, Lundy, Skerries, Bardsey, and Flatholm.

1851.—Messrs. Wilkins. Dioptric apparatus with a peculiar mode of producing short eclipses.

1851.—Inspected at Great Exhibition, but not taken. This apparatus was afterwards altered and fitted with additional vertical lenses, and offered to the Board for Lundy, but a holophotal arrangement made from a drawing obtained from France was adopted instead.

XXVI.

1851, July.—Jas. Childs, Brentford. Calling attention to his newly-invented lamp at Great Exhibition.

1851, August.—Committee inspect it at Great Exhibition, and report principle to be the same as fountain lamp, but offer no opinion as to merits without an opportunity of comparison with ordinary lamps of same description.

(Mr. Childs had been in Mr. Wilkins' employ.)

1852, March.—Messrs. Wilkins. Improvement in central burner for dioptric lights, by dispensing with the central wick and introducing a perforated conical tube with a small breaker therein.

1852.—Experiments made, current of air found to be thrown with greater force into contact with the other wicks, and the brilliancy of the light increased; the consumption of oil being also rather greater. Adopted accordingly.

By Order of Board. To use glass of English manufacture in dioptric apparatus.

On the first introduction of the dioptric apparatus English glass, manufactured by Cookson, was used at several of the Corporation's lighthouses, and in 1840 the Board were engaged, with the assistance of Mr. Faraday, in an elaborate comparison of refracting apparatus of English and French manufacture. At that time the advantage was found to be greatly in favour of the French, which was consequently adopted, but subsequently to that period Messrs. Chance, of Birmingham, were in communication with the Board, who in 1852 lent them a French lens from the Trinity House for purposes of comparison; and in March,—

1853.—Mr. Faraday reported favourably on a specimen of Messrs. Chance's glass.

1854, February.—Messrs. Chance state that they have succeeded with a section. Permission given them to fix it at this house. Examined by Mr. Faraday, who reported it equal to the French apparatus in the experimental room.

May.—Messrs. Chance request order. Are promised the first.

1855, February.—Corporation lend Messrs. Chance a 6th order apparatus.

March.—Corporation decline to lend them a work in the library on American lights, but will give them every facility for making notes from it.

September.—Trinity House invite Messrs. Chance to tender for catadioptric apparatus for Bardsey.

October.—Mr. Faraday goes to Birmingham to inspect an apparatus of Messrs. Chance's, and reports thereon.

Messrs. Chance request copy of report. Refused, but Messrs. Chance informed that their glass is quite equal to the French.

December.—Messrs. Chance renew request for copy of report. Refused. Reminded that apparatus is not in practical operation.

1856, April.—Messrs. Chance's apparatus for Bardsey accepted. Tender invited from them for a peculiar arrangement for Lundy, which Board propose should be French. Messrs. Chance state that they can undertake its manufacture.

Board determine that competition may include English glass.

May.—Messrs. Chance's tender for it accepted.

November.—Bardsey apparatus fitted.

1857, June.—Lundy apparatus tried at Blackwall. Substance of Professor Faraday's Report sent to Messrs. Chance.

July.—Lundy apparatus fitted at station. Messrs. Chance have since constructed the apparatus for the Whitby, Cami Rocks, and Vancouver's Island lighthouses, and are always invited to compete when lighthouse apparatus is required.

XXVI.

ENGLAND.

1855, January.—Messrs. Wilkins. Plan for arrangement of lamps and reflectors for flashing light. 1855.—Tried at Blackwall.

1855, April.—Richard Clark, Metropolitan Light Company, West Strand. Improvements in lights for lighthouses, patent burner, &c.; requests permission to exhibit.

1855, April.—Board depute an Elder Brother to inquire.

24th April.—Arrangements made for exhibition.

15th May.—Mr. Clark is prepared to exhibit certain burners.

22d May.—Mr. Clark sends observations on dioptric lights.

To lie on table.

29th May.—Mr. Clark sends burners.

12th June.—Trial made against concentric wick burner; considered unsuccessful. Mr. Clark obtains leave for further trial after certain alterations.

July.—Further trial, unsuccessful as on first occasion:

Admits this by implication in letter of 10th August. Prays payment of outlay. Allowed 66*l.* 6*s.* 8*d.* for burners supplied.

September.—Mr. Clark borrows one of these burners.

December.—Is requested to return it.

1856, April.—Calls attention to his patent to supersede dioptric lenses, and use silvered sphere or column instead. Complains of infringement by Messrs. Wilkins.

May.—Further as to use of silvered sphere with lamp and parabolic reflector to illuminate it, and proposing to produce parabolic reflector of four feet diameter.

Is requested to return lamp lent in 1855.

June.—Asks leave to retain it longer. Is reminded of the time he has had it, and that we expect return within a month.

1856, December, and 1857, April.—Return of lamp again requested, and proceedings threatened.

1858, April.—Mr. Clark submits his projects to Board of Trade, complains that he could not get them investigated by Trinity House.

Précis of the whole matter furnished to Board of Trade.

(The lamp above referred to has not yet been returned.)

1857, October.—By order of the Board. Experiments to test relative power and efficiency of different systems of illumination.

1857, 13th and 20th October and 10th November.—Experiments made at the Buoy Wharf, Blackwall, and observed by Deputy Master, Committee, and Professor Faraday (with Admiral FitzRoy on one occasion), from Warley once and from Hornchurch twice.

The arrangement, which revolved at various rates of speed in the course of the experiments, was as follows, viz. :—

- 1st. Seven lamps and parabolic reflectors on one face, occupying one fourth of the circle.
- 2d. A great annular lense lighted by a Fresnel lamp, occupying a second fourth of the circle.
- 3d. Two sets of three reflectors each arranged as at Buchanness, occupying a third fourth of the circle.
- 4th. Four lenses forming a part of the apparatus originally intended for the Bishop Rock light (but ultimately fixed at Godrevy). Each lens 9 inches wide but 50½ inches high, and each accompanied by refracting reflectors above and below, 24 to the circle, occupying the remaining fourth of the circle.

ENGLAND.
Circular 1.
Question
XXVI.

XXVI.

Reports were made by the Committee and by Professor Faraday to the effect that the seven reflectors have pre-eminence and are superior to the great lens; the lesser arrangement, known as the Bishop, being slightly superior to the reflectors arranged on the plan of the Buchanness.

1858, May.—By order of Board. Professor Faraday consulted as to his knowledge of any recent improvement in the exhibition of lights coloured red.

1858, May.—Professor Faraday is not aware of any fresh arrangement. The Director-in-Chief of French lighthouses addressed relative to red light on the Malakoff lighthouse at the entrance of the Bordeaux River. M. Reynaud furnishes information in reply.

1858, June.—Board of Trade. Memorial from Mr. B. Monieriff, Liverpool, for improvements in lighthouses, that they should be provided with a mechanism by means of which their light may be kept in constant reciprocate motion in a straight vertical line, the whole length of which is to be shown to the mariner.

1858, June.—Board of Trade acquainted that information supplied is insufficient to enable us to form an opinion.

1859, May.—Professor Faraday. That metal framework of the dioptric apparatus is thicker than need be.

1859, May.—Mr. Wilkins consulted thereon, and reduction in thickness agreed to.

1859.—Messrs. Chance. Suggest increased number of upper and lower prisms in second order heliophotal apparatus.

1859.—Referred to Mr. Faraday, and ultimately adopted for a light in Ceylon.

1859.—Messrs. Wilkins. A 36-inch reflector, 14 inches in depth, 6 inches focal distance, which has been tried against smaller reflectors, and appears to be as powerful as a first-class revolving dioptric apparatus.

1859. Acquainted that we have no objection to try the effect on the first suitable occasion.

1859, May.—Mr. Jones, principal keeper, Maplin. To lower the support or bearer of the central breaker in the dioptric lamp, and thereby remove obstruction to the draught further from the light.

1859.—Referred to Messrs. Wilkins, who see no reason why it should not be done. Committee approve suggestion, and order that it be carried out as burners are forwarded for repair.

1859, August.—Board of Trade. Calling attention to proposal of Mr. Alexander Gordon for use of moulded glass for lighthouse purposes, as invented by M. Degrand, Engineer to the French Lighthouse Board.

1859, August.—Consideration deferred pending examination by a Committee of Elder Brethren, with Professor Faraday, of the lighthouse at Point de Walde, Calais, which is fitted with this glass. This examination has since taken place, and the Board are in correspondence with the French authorities on the subject. Sections have been sent from France, and are in course of examination.

XXVI.

1859, October.—Messrs. Wilkins. For leave to submit an improved method of polishing reflectors by machinery.

1859.—Leave given.

1859.—By order of the Board. Experiments to test the relative merits of various methods for promoting combustion of oil in a central dioptric lamp.

1859.—Experiments have been made at the Trinity House before the Elder Brethren and Mr. Faraday, which have resulted in the selection of a plan by Mr. Wilkins, by which the oil is raised by pressure applied to the surface of it, and so made to overflow the burner much more copiously than at present.

Lamps of this pattern have been ordered for Dungeness and Smalls lighthouses, in which the fourth wick has also been resumed.

Section.—Proposals for Distinguishing Lights.

1847, February.—Rear-Admiral Ward (through Admiralty). "That the lights on the principal and prominent headlands should be revolving, a portion of which should exhibit a coloured light, say, about three minutes of the most brilliant white; then, two minutes of coloured instead of total darkness, or three minutes of white preceded by half a minute coloured, and followed by the same; then, one minute dark."

Selly, Seven Stones; as they are, being very good.

Longships; red.

Lizard; green.

Eddystone; a red shade revolving every five minutes within the circle of the glass. The whole of the lights, with the above exception, to be revolving, either with three minutes of bright white light, and then two of coloured, and no dark, or one minute dark, then half a minute coloured, then three minutes white, half a minute coloured again, and then dark.

Start; blue.

Casquets; yellow, or as they are.

Portland; red.

Needles; green.

St. Catherine's; as it is.

Beachy Head; blue.

Dungeness; red.

South Foreland; green.

North Foreland; blue.

1847, February.—Admiralty informed that we entirely concur with Admiral Beaufort, "that the means proposed would lead to inextricable confusion."

1847, April.—John Ridley, North Shields. To show a different coloured light at a certain point of the compass when ships come within the limits of danger.

1847, April.—Read, and to be acknowledged.

1848, February.—"J. S.," Hull. To prevent ships mistaking one light for another as well as to effect a great saving in the expense, by rendering unnecessary revolving lights altogether.

Suppose, for instance, all the lights on the coast of—

Essex are white;

Suffolk, blue;

Norfolk, red;

Lincolnshire, green;

Yorkshire, again, white;

and so on round the kingdom. Or two counties might be joined in one colour, but keeping always the above rotation; or, perhaps, better only three colours.

Again, supposing each light on each respective coast, besides its name, was numbered 1 upwards,

XXVI.

these numbers might be represented in their respective colours by three lights, thus—

In the Irish channels and coasts on both sides the colours should correspond on the same parallels, for sake of better remembering vicinity, and for uniformity.

Liverpool, red; Dundrum Bay, red;
Isle of Man, white.

All the lights might be fixed, and never out of sight when once seen, as revolving lights are.

1848, February.—Read.

1848, February.—J. Penrice. A method by which he proposes to distinguish lighthouses.

1848, February.—Attended and exhibited a working model.

May.—George Wells. A telegraphic lighthouse (as per plan herewith).

May.—Attended, and submitted model. Board offer him a trial at Purfleet.

Mr. Wells proposes that he should not be at any expense.

June.—Board cannot accede, but desire to offer him every facility.

July.—Mr. Wells, that he is preparing for trial.

Informed that Board will appoint time if he will indicate place, and that Elder Brethren will attend.

No further proceedings.

December.—T. Aston (Madras Cavalry), Bedford Row. Plan for adding distinguishing or proof lights to the present lighthouses (as per plan herewith).

Copy transmitted by Admiralty.

December.—Acquainted that Corporation are not disposed to encourage him to proceed further, but are willing, if he wishes, to inspect models illustrative of practical effects.

Admiralty informed of reply to Mr. Aston.

1849, December.—E. Plumley, Battersea. That the space during which a light is visible shall represent a certain numeral, and that the number so represented shall be precisely the number of minutes during which the light is visible.

Mr. Plumley then suggests modifications of this principle by regarding the observations of the light as representative also, and by the employment of red light; and submits tables showing the means of representing any of the nine numerals or the cypher, as required. Thinks that seconds might be used instead of minutes; that red light is objectionable, on account of absorption. Suggests process of the Company for illuminating glass to increase luminosity and power of lenses; and finally with regard to flashing lights, proposes to give to each figure its number of flashes or scintillations as rapidly as they can be counted, with intervals of darkness of sufficient length between each figure and at the conclusion.

Thus the number 225 would require two flashes for the first two, then an interval of darkness, say half a minute; then two more flashes and a like interval; and then five flashes and a double interval, say of one minute.

1849, December.—Informed that his proposal is not regarded as adapted for practical purposes.

1851, January.—J. Davey, Devonport. That the lanterns should be hexagonal, and on each side a number, the whole height of the lantern, painted in black upon the glass.

XXVI.

1851, January.—Acknowledged.

1852, May.—Mr. Davey enlarges on the same idea.

1852, May.—Laid before the Board. Informed that the ideas are not in any manner novel.

1851, July.—R. Smith, Chelsea. That present lighthouses be furnished with a small steam boiler and the ordinary whistle to be fixed thereinto. Each lighthouse to be furnished with a certain number of signal whistles in rotation, according to the station. The boiler to be fitted with a crank and barrel similar to an organ, and with the aid of the steam to be made self-acting. The turning of the barrel to open a valve and admit the steam into the several pipes in rotation, the sound to be confined to each whistle for ten seconds; and each pipe or whistle to have a distinct sound, so that the given number of each may be counted, when the sound will cease for half a minute. By such rule any person may know the name or situation of the lighthouse.

A copy sent from Admiralty.

1851, July.—Attended and explained.

Admiralty informed that Mr. Smith had attended.

1851, September.—Joseph Joplin, St. John's Wood. That the roof of a lighthouse should be a form composed of a cone and a spherical dome, intersected scientifically. The conical and spherical parts of the roof, as well as a portion of the cylindrical shaft on which they rest, may be glazed with different colours, or one may have white glass. In this way a series of distinctly different appearances for lighthouses may be given, each having the peculiarity of indicating north, south, east and west, and their intermediate parts.

If the south side exhibit most of the conical form, a part of the sphere will be seen over it, and the north side would present the greatest portion of the spherical part, with a wing of the cone on each side at the bottom. Approaching on the east side the cone would appear to the left, presenting about an equality of surface to that of the sphere on the right. On the west side these parts would appear reversed; viz., the cone to the right, and the sphere to the left.

Offers to attend appointment.

1851, September.—Thanked for communication. Informed that it will not be necessary to trouble him to attend.

1851, November.—C. Babbage, F.R.S., Dorset Square. To make each lighthouse repeat its own number during the whole time it is lighted, by occultation and reappearance of light.

Upper part of cylinder to be enclosed by thin tube of metal, and to be made to descend slowly before flame, and allowed to start suddenly back.

Lighthouses not to be numbered in order of position, but so that no digit occurring in the number denoting the several lighthouses nearest it on either side shall have the same digit in the same place of figures, so that two out of any three figures would always detect any error in observing the third.

These occultations would distinguish lighthouses from casual lights. Whole illuminating power would be employed undiminished by use of coloured glass, &c.

Lighthouses might thus be made telegraphic with vessels in distress, and system might be developed to the extent of making the identification of a light instantaneous by peculiarities in the character of the occultation.

(Private pamphlet, "Notes respecting Lighthouses.")—See Suggestions for Lighting Buoys under proper head.

These suggestions were not adopted.

ENGLAND.

XXVI.

Circular I.
Question
XXVI.

1857, September.—Captain Hall, H.M.S. "Calcutta," transmitted through Board of Trade. That at certain hours particular lighthouses in the Channel should throw up blue rockets.

Board of Trade acquainted that, in opinion of Elder Brethren, cases of mistake between ships' lights and those from lighthouses or vessels must be of exceedingly rare occurrence, and that plan proposed would be inefficient, inasmuch as coloured rockets would not generally be seen so far as the light itself.

1859, May.—C. D. Bouton, Dinan. Whether jets could not be so fixed on the globes of lighthouses, and so placed as to form, if not the whole name, the first four letters of the name of the lighthouse; as, for instance, the Caskets and the Scilly—*Cask—Scil*, which, by aid of strong reflectors could be seen at such a distance as to avoid any danger to ships or vessels.

1859, May.—Receipt acknowledged.

Section.—Proposals relative to Lighthouses, or their Foundations, on the Goodwin or other Sands.

1845, March.—Sir Samuel Brown, Hanover Street. To place bronze columnar lighthouse, with parabolic foot and base filled with concrete, on Goodwin, or elsewhere, in six or seven fathoms water, for 11,000*l.*, and guarantee it for a year.

Acquainted that experience of Elder Brethren indisposes them to entertain project for erecting lighthouse whose base rests upon surface of sand. Will consider any plan he may submit for lighthouse at Rundlestone, Rocks off Scilly, or Shoal of the Lead.

1845, October.—Rev. F. A. Glover, Dover.—A plan for foundations for lighthouses on sand or rock in any depth of water.

(Mr. Glover also submitted a plan for Island Breakwaters in 1850.)

1845, October.—Attended with model.

November.—Mr. Glover submitted observations in reply to remarks of Brethren. Receipt acknowledged.

1846, March.—J. De La Haye, Liverpool.—Lighthouse on Goodwin. Six wrought-iron shafts or pillars in the sand, each placed in an iron cylinder to sink them by atmospheric pressure, to be bound together with hoops or rings, and form a circular skeleton tower, through which the waves could pass, &c.

1846, March.—Informed that principle of atmospheric pressure is not new.

Mr. De la Haye replies, that his point is the skeleton lighthouse, to admit of waves passing through.

Informed, in reply, that the method of construction by open piles has been applied in the case of the Smalls, built in 1788, and in subsequent erections at Maplin, Fleetwood, River Dee, and Belfast.

1847, August.—C. Wise, Westminster. Iron base for Goodwin Sands and anchors, including one for mooring floating lighthouse.

Acquainted that plans have been laid before the Board.

1847, October.—Bolton Bolton, Pimlico. To build a lighthouse on the Goodwin Sands for 82,000*l.*, or to convert them into a harbour of refuge.

Acquainted that Corporation has not any present intention of attempting to erect a lighthouse on these Sands; and that construction of harbours of refuge does not come within the province of this Corporation.

XXVI.

1847, November.—W. N. Clay, Ongar. Adverting to former proposal for foundation of lighthouse on the Goodwin. Thinks Sands may be recovered.

Acquainted that Corporation has no present intention, &c.; and that "recovery" of the Sands is not within its province.

1847, November.—G. Shepherd, C.E., Fleet Street. Sends copy of "Mining Journal," containing an article respecting construction of lighthouses on dangerous sands.

Suggests the principle upon which quicksands are dealt with in mines; and to sink a cylinder, 30 feet in diameter, hermetically sealed, and forced down to the chalk by Dr. Potts' atmospheric apparatus. Sand and chalk to be afterwards taken from interior, and piles driven, and concrete used. Outer circle of protecting piles, concrete, &c.

1847, November.—Thanks returned for communication.

1848, February.—Attends with drawings and explanations.

Subsequently informed that Elder Brethren have not any intention to attempt to construct a lighthouse on the Goodwin Sands.

1848, January.—J. De La Haye, Liverpool. Lighthouse on Goodwin. A wrought-iron cylinder to be sunk 30 feet, 200 feet diameter, in 12 distinct pieces, with flanges for quickly bolting together; divided into 12 compartments, by partitions extending only half the depth; to be sunk by patent steam hammer, or pneumatic process; to be covered with timber, and iron platform. Lighthouse of sheet iron, with inside masonry. Iron bars from a ring round the tower, at 50 feet from base, to extend to edge of platform, to be covered with sheet iron, and form a heavy gradient for waves to roll up before reaching tower. Interior of this part to be nearly filled with stones.

Immense weight of structure to compress sand, and keep it steady.

1848, January.—Informed that Corporation has not any present intention to erect any structure on the Goodwin.

1848, February.—W. Vincent, Birmingham. Lighthouse on Goodwin or other sands. Open piles, hollow at lower end, and loaded with iron ballast, spreading out from a centre, with barbs at the bottom, to prevent sinking too far, and to act as stays. Chains to be wound spirally round piles, &c.

1848, 16th February.—Acquainted that this Corporation has no present intention of attempting to erect a lighthouse on the Goodwin Sands, but that if he desires to send plans there is no objection.

23d February.—Mr. Vincent sends plans.

4th March.—Informed they have been laid before Board.

27th March.—Mr. Vincent inquires as to decision.

30th March.—Referred to first communication, Board's views remaining unaltered.

November.—Solicits employment under Corporation. Informed that Board have no occasion for his services.

1849, August.—Adverts to plans, prays pecuniary assistance. Informed that funds of Corporation are not applicable to his relief.

1850.—Mr. Vincent again urges adoption of plan.

December.—Informed that his view as to utility of lighthouse is altogether at variance with that of Board, &c.

XXVI.

1848, February.—D. McGill and J. Horend. Permanent breakwater at Goodwin, with lighthouse thereon; with basis 600 feet square, and proposing a toll of one penny per ton on all shipping, and graduated scale of charge for master, officers, and crew.

Acquainted that construction of breakwater is not within province of Corporation.

1853, February.—J. W. Horend. Renewing proposal, with modifications. Estimate 580,000*l.*, or, on a lesser scale, for 68,000*l.*

1848, February.—G. C. Redman, City of London Club. Fort on the Goodwin, with lighthouse attached; has submitted it to the Duke of Wellington, who refers him to Corporation as regards the lighthouse; requests report to his Grace.

May.—Acquainted that construction of forts not being within province of Corporation, Elder Brethren decline to put themselves in communication with his Grace thereon.

1848, June.—J. Goldfinch, Shepherd Market, May Fair. Lighthouse on Goodwin, with refuge and sailors' chapel. To be made of cast and wrought iron, and fixed on wooden piles.

June.—Acquainted that Elder Brethren have not any present intention of attempting to erect a lighthouse on these sands; are obliged by opportunity afforded them of inspecting plans.

1848, September and December.—Reverend J. B. Robinson. Inquiring as to possibility of erecting structure on the Goodwin, and calling attention to new material for use in sub-marine foundations.

Informed of existing arrangements at Goodwin, and that Corporation have no present intention of attempting to erect any additional mark.

1849, May.—E. Evans, Dorking. Lighthouse on Goodwin, desires to submit plans.

Acquainted that this Corporation has not any present intention of erecting a lighthouse on the Goodwin Sands.

1849, June.—H. Harbord. Plan and model for erecting a lighthouse on Goodwin. A circular iron plate, 60 feet diameter, to be placed at the bottom, and one, 30 feet diameter, some height above it; to be connected by eight iron pillars, 50 feet long; to be planked 2 feet up from the bottom, and hold 200 tons of clay and stone; the rest of the structure open to egress of wind and wave. To be floated out and sunk and moored with anchors. Circular lightvessel on top of it.

1851, June.—H. Harbord. Advertises above; proposes now to force a rod, 1½ inch diameter, through sand into chalk sufficient to hold it, with screw joints to lengthen it; then round it, at proper distance, stones to be thrown overboard, and come up in form of cone.

Acquainted that Corporation has not any intention to attempt the construction of a lighthouse on the Goodwin.

1849, June.—W. King, 8, Woodstock Street, Oxford Street. For leave to submit plan for Goodwin.

Acquainted, that Corporation has not any intention to erect lighthouse on the Goodwin, but that we will inspect model if he continues to desire it.

1849, July.—M. Duval Piron, Paris. Lighthouse

XXVI.

ENGLAND.

Circular I.
Question
XXVI.

on Goodwin. Iron well of 27 feet diameter formed of vertical bends, double skin, to be sunk through sand to solid bottom; sand to be dredged out, concrete filled in. Platform to be raised above top of well, by hollow iron pillars filled with concrete; column to be of sheet iron cylinders. Light 98 feet above low-water mark, cost 7,000*l.*

Thanks returned. M. Piron acquainted that Corporation has no present intention to attempt erection of lighthouse on the Goodwin.

1850, February.—J. E. Serrall, New York. Lighthouse on Goodwin. A crate, 150 feet diameter, of copper or iron rods braced with diagonals, and with inner circles 15 feet apart; in the centre a tube 15 feet in diameter. Crate to be filled in with rubble, except the shaft, and fresh crates added as the others sink; solid bottom to be ultimately reached, perhaps at 110 feet.

Lighthouse above with three lights vertical, upper lantern 150 feet; estimate, 100,000*l.*

Thanks returned. Mr. Serrall acquainted, that this Corporation has not any intention of erecting a lighthouse on those sands.

1850, February.—B. Armstrong, Poplar. Lighthouse on Goodwin; to be built in place of safety, floated to station, pressed down by atmospheric pressure, and forming water-tight caisson filled with concrete, &c. Foundation assumed at 70 feet; inner part half of perfect sphere 100 feet in diameter, outer part 120 feet diameter, divided into eight water-tight compartments; lighthouse to be placed on top of outer sphere. Steam engine on top of inner sphere to exhaust air, pump sand out, &c.

Acquainted that Corporation has not any intention to erect a lighthouse on those sands.

1850, March.—Alex. Roberts, C. E., Clerkenwell. Lighthouse, for placing on rock, sand, or gravel bottom, without any previous substructure or foundation, and could be erected in a week. Main shaft of iron, lower end fitted into cast-iron plate. Into the upper end is keyed a wrought-iron shaft, to receive platform, &c. Standard supported by mooring it to crabs or struts, with means of adjusting shaft in perpendicular line. Outer crab connected with inner by lever, and outer mooring chain acting on end of that lever.

Estimate, 1000*l.* to 1500*l.*, and upwards.

Attended and submitted.

1850, December.—G. Grazebrook, Liverpool. Has a plan for the Goodwin. Cost of building will be less than for ordinary kind of lighthouse; proposes that it should be built at Corporation's expense, and, if found to answer after a year's trial, that he should be paid 100,000*l.* for his invention.

1850, 11th December.—Acquainted that Elder Brethren decline to accede to his proposition, and that Board has not any intention of erecting a lighthouse on the Goodwin.

12th December.—Mr. Grazebrook replies, urging importance.

18th December.—Informed that Board differ with him as to utility of lighthouse on Goodwin, and that although his plan should appear feasible would decline to adopt it.

21st December.—Mr. Grazebrook thinks it so important, that he will communicate plan without prospect of reward if we will proceed with it, should it be considered practicable.

1851, 2d January.—Informed that sands have been marked by light vessels, which we consider better guides.

ENGLAND.
Circular 1.
Question
XXVI.

XXVI.

6th January.—Mr. Grazebrook will be glad to be informed if we change views.

1851, May.—S. Borrass, Liverpool. Iron lighthouse on Goodwin (or other sands, or in deep or shallow water. Requests leave to submit plan.

Acquainted that Corporation has not any intention to attempt the erection of a lighthouse on the Goodwin.

1851, June.—S. Borrass, Liverpool. Further as to plan; can submerge lower part of building in 40 fathoms water, or in shallow water. Iron to be used as coffer dam, and stone building inside.

Acknowledged, and acquainted that letter has been laid before Board.

October.—T. E. Smith, Hackney. To establish lighthouses on or through shifting sands, by first sinking an iron tube through the sand to the rock beneath, large enough to allow a man to pass for the purpose of excavating; the standards to be passed through the tube and soldered into the rock, and the tube to be withdrawn by lighters, &c.

Offers to attend and explain further.

Acquainted that attendance to explain plans will not be required.

1852, January.—Earl of Darnley, Belgrave Street. Foundations for lighthouses on Goodwin, &c., by combining melted bitumen from Trinidad with sand and gravel, and pouring it on sand banks or shoals to constitute foundations. Drawing shows cone with extended base and surrounding sand conglomerated with petroleum to form submerged rampart.

Thanks returned.

1852, February.—G. Sinclair, Parthenon Club. Lighthouse on Goodwin. Foundations on principle of Plymouth Breakwater.

1853, November.—Renewing proposal.

Copy received from His Royal Highness the Master and one from Treasury.

Thanks returned. Acquainted that Elder Brethren have not any intention to erect a lighthouse on the Goodwin.

1852, July.—C. James, Marylebone. Lighthouse on Goodwin by sinking a shaft in the nearest suitable part of the adjacent shore, and building a tunnel for permanent passage of communication, and thence working upwards.

Acquainted that this Corporation has not any intention to erect a lighthouse on the Goodwin Sands.

1852, September.—B. G. Martin, Maidstone. For permission to submit model for laying down foundations on or off Goodwin or any other sands.

September.—Acquainted that he may attend any Tuesday that may suit his convenience. Attends and submits model. Requests opinion thereon.

October.—Informed that it is not the practice of the Corporation to offer any opinion on models submitted for their inspection.

1852, September.—W. Darley, Sheerness. Inquiring as to most dangerous points on coast.

October.—Proposing to build lighthouses, &c. at Goodwin and Nore.

Acquainted that Elder Brethren have not any intention to erect lighthouses on Goodwin or Nore.

XXVI.

1853, November.—J. S. Morris, Upper Thames Street. Lighthouse applicable for situations and foundations similar to Goodwin.

Acquainted he might attend.

Attended and submitted.

1854, May.—J. F. Stanford. To know if we will sanction a seamount on the Goodwin, and how far we will assist and grant privileges.

Acquainted this Corporation has not any intention to erect a lighthouse or other mark upon the Goodwin, and that Elder Brethren must decline giving encouragement to any private enterprise having that object.

1856, January.—John Neale, Chatham. To substitute large iron vessels filled with concrete, after being floated to positions for foundations of lighthouses, instead of present slow process of masonry.

To lie on table for consideration.

1856, August.—W. E. Hall, Middleton Square. Offers to submit model for lighthouse on Goodwin.

Thanked; declined.

1856, October.—Ralph Stennell, of Lynn. Desires to submit new principle which would secure solid foundation for light on Goodwin.

Acquainted that Corporation do not purpose making any further experiments for the erection of a lighthouse on these sands.

1857.—A. Chard, C.E., Brixton. Lighthouse on Goodwin Sands. Cylinder of sheet iron 100 feet diameter, 50 feet high. Outside this another expanding cylinder of same diameter at base, but 150 feet diameter at top. Thus a water-tight wedge-like space 25 feet in width at the top would be left, the base forming a circular wedge to work its way through sand to a solid bed; to be floated out and sunk with chalk in outer circle, then angular blocks of Portland stone in interior until basis like breakwater at Plymouth is obtained, &c.

1857, January.—Acquainted that Elder Brethren have no present intention of attempting erection of lighthouse on Goodwin, but are ready to give best consideration to any plan he may desire to submit.

February.—Thanks expressed for explanatory statement.

Mr. Chard inquires as to approval. Referred to previous letter. Acquainted that Elder Brethren are not prepared to give sanction to any scheme for erecting a lighthouse on the Goodwin.

1857, February.—W. S. Ashby, Chelsea. Has a plan for a lighthouse on the Goodwin.

Acquainted that this Corporation has no intention of attempting the erection of a lighthouse on these sands.

1857, May.—W. Austin, C.E., Wandsworth. Imperishable stone blocks for lighthouses, and cast iron annular ring double-fanged and trough-sunked to receive dove-tailed stone blocks, to form footing for lighthouses on soft ocean beds.

Ordered that Mr. Walker be asked about invention.

No further proceedings.

1857, December.—T. K. Winder, Admiralty Pier Works, Dover. For leave to submit plan for erection on Goodwin.

Ordered to lie on table.

XXVI.

1858, April.—Lieut. E. Manico, R.N., Bucklersbury. To obtain foundations by means of his patent caisson de fer.

(As per plan herewith.)

Acquainted that it has been laid before the Board.

Messrs. Mitchell's method of obtaining foundations in sands by the use of screw piles had been adopted by the Corporation for some years prior to 1845. The Maplin lighthouse was built on this principle in 1842. The Chapman in 1851, and the Gunfleet in 1856.

Section.—Proposals relative to Lightvessels, &c.

1846, November.—Hon. and Rev. A. Percival. To transfer semaphores used on shore to hulls stationed at proper distances, and secured by mushroom anchors and chain cables, and furnished with lights, gongs, &c.

Acquainted that the experience of the Elder Brethren does not permit them to give any encouragement to the prosecution of his plan.

1850, October.—Further as to same subject.

1847, February.—Alex. Gordon, C.E., Fludyer Street. Illumination of floating lightvessels in a manner that the light shall be of equal brilliancy in the roughest or in the calmest weather.

Not specially considered; submitted with other propositions, for which see section Lighting Apparatus, p. 38.

1848, September.—Robt. Banner. A harbour of refuge on Goodwin by floating breakwaters, with one or more advanced lights.

Acquainted that construction of harbours is not within the province of this Corporation.

Mr. Banner replies.

Corporation decline to enter into subject for reasons above stated.

1850.—By order of Board. To use dioptric apparatus in lightvessels.

1850, November.—Drawing from French maker (M. Lepaute) obtained by Mr. Wilkins.

Experiment made with spare lightvessel near the Chapman.

Report of Committee not favourable.

Board order further trial under another arrangement.

1851.—Small apparatus from Mucking fixed at Tongue light.

1856.—Small apparatus fixed at St. Nicholas.

1850, March.—R. Grieve and others, masters of vessels. That in the event of a lightvessel breaking adrift, the lights may be kept burning and a night signal adopted.

The 16th Article of the Instructions to Masters and Mates reconsidered, and "Additional Instructions," giving discretionary power, issued 6th January, 1852.

1852, July.—Rear Admiral Taylor. A shipwreck asylum on the Goodwin.

Transmitted by Admiralty.

Admiral Taylor informed that, appreciating his motives of humanity, the Elder Brethren will not object, provided there is nothing to mislead or obstruct navigation.

XXVI.

1852, September.—James Hall, Trinity House, Surveyor of Shipping. Presents two models of lightvessels, one a full the other a sharp bowed vessel, and forwards testimonials from master mariners of the superiority of sharp over full-bowed vessels for riding in all kinds of weather.

1852, September.—Thanks returned. Light Committee to consider subject whenever new lightvessels are required.

1853, December.—George Herbert, Trinity House. Circular lightvessels on principle of hollow bottom and central mooring, as previously applied to buoys; accompanied by a paper furnishing "reasons for considering that the form of a ship is not the best form for a stationary floating body, and for supposing that a circular vessel moored from its centre of gravity is a much superior form for that purpose."

1853, December.—Referred to Committee.

1854, March.—Letter from Mr. Herbert with plans and estimate of cost.

Board of opinion that principle should have encouraging attention.

Mr. Samuda who prepared plans to attend the Board.

April.—Mr. Samuda attended and expressed very favourable opinion of the plan.

Reference to Joint Committee to consider what steps to take to ascertain whether the properties of the invention are practically applicable to the floatation of a large circular body, as they have already been proved to be to that of buoys.

June.—Large beacon ordered.

October.—Large beacon placed at South Sand Head, answered in a satisfactory manner whilst afloat, but foundered in November, owing, as it is supposed, to some defect of construction.

1855, January.—Sir Charles Fox. Design for floating wrought-iron lighthouse on foregoing principle.

1855, January.—Sir C. Fox informed that having regard to present difficulty of directing the movement of such a body to a place of safety in event of casualty, and to the plan not having undergone sufficient test in forms of lesser magnitude, we cannot at present sanction.

June.—Sir Charles requests return of design, and reiterates faith in soundness of principle.

Design returned.

1855, September.—Board of Trade. Forward letter with resolution from Shipowners' Association, Liverpool, in favour of light in fairway of St. George's Channel on same principle.

1855, October.—Letter in reply, that Elder Brethren do not see necessity, and pointing out dangers both to the trade and to the crew of the vessel if it broke from moorings, &c.

1856, April.—Board of Trade. Adverting to proposal to light Blackwater Bank, and inquiring as to suitability of floating light of Mr. Herbert's construction at that station.

1856, April.—Reply, not prepared to recommend lightvessel on Mr. Herbert's principle in so exposed a situation.

1856, May.—Mr. Renton, Adelphi. Proposal and plan for floating light tower on Herbert's principle in Prince's Channel.

1856, May.—Reply, not prepared to adopt it on this occasion.

December.—Mr. Renton, Adelphi. Proposal for one to seaward of the "Stones," St. Ives, asserts it to be no more unmanageable than a lightvessel, and more easily brought up when adrift, &c.

December.—Reply, not prepared to adopt it for this purpose.

1857, January.—Board. To Mr. Renton that recent destruction of beacon on Rundlestone affords opportunity of again testing principle of Herbert's

XXVI.

Patent, will do so upon condition that sufficient guarantee be given, securing Corporation from all liability in event of failure, for two years.

1857, January.—Mr. Renton requests to be informed, before submitting proposal, of the spot in which it is to be moored; encloses letter from Captain Williams, of the Admiralty Survey, relative thereto.

February.—Board reply that spot suggested by Captain Williams will be adopted, provided beacon be moored not more than two cables' length from the rock.

March.—Mr. Renton, that he will provide and deliver a beacon 20 feet diameter, showing 27 feet above the waterline, with a 6 cwt. fog bell, rung by floats, for 1,600*l.*, or, with a guarantee, for one year 2,150*l.*, or for two years 2,850*l.* Moorings additional, and, according to character, either 35*l.* or 62*l.*

Amends this proposition (upon explanation in regard to payments which he misunderstood to be withheld during time of guarantee) into offer to place and maintain for twelve months for 2,085*l.*

April.—Board rejoice that they are willing to test the efficiency of this description of beacon if Mr. Renton is ready to comply with following additional stipulations; viz., a guarantee for two years, and, if adrift during first year, repayment to Corporation of 2,000*l.*; if adrift in second year, repayment of 1,500*l.*; beacon, in each case, to become property of contractor; that if Corporation desire renewed trial, all expenses of repair, &c. to be borne by contractor, and the two years to date from time of re-mooring.

15th April.—Mr. Renton declines to accede: thinks principle has been successfully established in buoys, and that the unusual character of the guarantee compels him reluctantly to decline offer.

22d April.—Elder Brethren consider negotiations as terminated.

October.—Board of Trade. With proposal from Victoria Foundry (also received direct) to place floating light on this principle (vessel, tower, lantern, 1st-class dioptric, 40 feet above water, signal gun, and full accommodation for keepers,) to northward of Stone's Rock for 12,000*l.* Will maintain it for reasonable period; and, if not successful, will build lighthouse on Godrevy without extra charge.

Board of Trade think trial of this principle should be made; would have suggested present instance but for contracts for Godrevy Lighthouse; think there may be some place where it may be expedient to try this description of lighthouse on future occasions.

Memorials from the West of England were sent to the Board of Trade in favour of this proposition, and a deputation had an interview with the President. The completion of the contract for building a lighthouse on Godrevy was suspended during the consideration of this proposition, which was ultimately declined.

1858, March.—Board of Trade. A beacon buoy off the Stones; but that if we consider it would not be likely to stand the sea, then an iron skeleton beacon on the Outer Stone.

1858, March.—Board reply, proposing trial of beacon buoy on Herbert's principle. Will put themselves in communication with patentee, and submit such proposal as he may make, subject to guarantee for efficiency and permanence.

Mr. Renton submits terms, not including guarantee. Board require guarantee.

Mr. Renton offers it for two years, excluding damage by collision.

Terms finally amended, to include collision, beacon of 17 feet diameter, 25 feet elevation, to be replaced at station within two months if adrift, and conspicuous sea mark meanwhile, 885*l.*

These terms accepted by Board.

1858 and 1859.—This beacon was placed on 14th January 1859. Broke adrift in a gale on 4th February, and, after driving a few miles to the northward, was destroyed amongst the rocks. Its place was

temporarily supplied by a buoy purchased by contractor of the Corporation; and a second beacon, on the same principle as the one destroyed, was placed on 20th September. This parted from its moorings in the gale of the 1st November, drove on shore under Pentreath Cliff, since which no report of its condition has been received.

1858, August.—Messrs. Harvey, St. Ives. Light-vessel on Herbert's principle for the Hanois Rocks, Guernsey.

1858.—Acquainted that we have no intention of placing a floating light there.

1859, September.—Board of Trade. Transmitting Letter from Mr. Lindsay, M.P., with memorials from commanders of ships in foreign trade, at Liverpool, for a light on Herbert's principle in fairway of St. George's Channel.

1859, September.—Elder Brethren request reference to letter to their Lordships, in October 1855, reiterate observations as to dangers, and state, that having regard to improvements in lighting the channel, they retain their opinion that the exhibition of a fairway light in the position proposed is neither required nor judicious.

1854.—Baron von Reinagle. To moor a large number of floating platforms (asylums) off the Goodwin and in various places round the coast.

Acquainted that Elder Brethren will not object, but that he must come to the Board on each occasion, in order that it may be seen that the marks of direction, by day and night, are in no way interfered with.

1854, October.—C. Cartwright, Great Trinity Lane. Has a plan for placing a light on Goodwin Sands.

1854, October.—Mr. Cartwright called. Secretary explained to him that light on Goodwin was not required.

1857, February.—C. Cartwright, Great Trinity Lane. Recurs to proposal of vessel or vessels for preservation of life, and assistance to shipwrecked mariners.

(Addressed to Lord John Russell, as an Elder Brother.)

Acquainted that Corporation has no intention of placing vessels on those sands with the object he proposes, and reminded that there is already a light-vessel moored at each end of Sands.

1855, June.—J. Brown, Railway Place, Fenchurch Street. For leave to submit model of improved formation of the bottom of lightships, to prevent them in some degree from rolling and pitching, and to cause them to ride much easier.

1855, July.—Attended Board.

1856, May.—By order of the Board. To make trial of iron lightvessels.

The subject of iron lightvessels was under consideration in 1843, but they were not then deemed desirable.

1856.—Particulars requested from Liverpool, where iron lightvessels were in use.

June.—Specifications from shipbuilders obtained, and compared. Lloyds' surveyor consulted.

July.—Surveyor of shipping to prepare specification.

August.—Proposal made to Board of Trade. Board of Trade request copy of report from Liverpool. Report sent, and Board of Trade's sanction obtained.

September.—Tenders invited.

October.—Messrs. Napier's accepted.

The first iron lightvessel was placed at the Goodwin in July 1857.

XXVI.

Two more are at this time building by Messrs. Vernon, of Liverpool.

1857, February.—By order of Board. That district agents should be supplied with signal rockets, to enable them to answer signals which may be made from the lightvessels.

1858, November.—Richard Roberts, Manchester. That present system of floating lights is objectionable, on account of oscillation, rendering dioptric system unavailing; that lightvessels, consequently, too nearly resemble ships' lights; that, on other hand, shore lights not being in direct course to be steered involve great nicety of calculation.

Submits plan of a floating lighthouse, with light shown on principle of "gyration," so that belt of dioptric lenses will always maintain parallelism with horizon.

This lightvessel was to be circular, moored in a particular manner, and the machinery driven by engines in the hold.

1858, November.—To lie on table for inspection.

Section.—Miscellaneous.

1846, October.—G. M. Goodwin, Almshouses, Deptford. "A light ladder." The divergence of the lights to be so arranged that the width of the beam shall indicate the distance from the shore.

Two points of compass lighted only.

	Width of Ray.		Distance from Light.
	M.	F.	M.
Note the first appearance of the light, measure the distance until you lose it; then enter the table with this distance, opposite which will be the ship's distance from the light.	1	9	5
	3	8	10
	5	7	15
	7	7	20
	9	6	25
	11	5	30

Acknowledged, with thanks. Admiralty inquire as to scheme. Acquainted that Elder Brethren do not consider it calculated to afford any practical benefit to shipping.

1847, January.—N. Perry, Westminster. Can show how to remove the Goodwin Sands.

Acquainted that it is not within the province of this Corporation.

1848, July.—C. West, Submarine Telegraph Office, Leadenhall Street. To connect all insulated light-houses with the mainland by submarine electric telegraphs.

Will begin with Eddystone at his own risk, and to be paid 1,000*l.* if successful.

Acquainted that Elder Brethren decline to accept this proposal.

1848, October.—John Knowles, formerly Light-keeper, Haisburgh. Has invented a new patent lighthouse, so that no mistake can be made.

XXVI.

ENGLAND.
Circular I.
Question
XXVI.

1849, September.—J. N. Holbrook. Lighthouse which he represents as being much improved as, respects the greater safety against shipwrecks in dark and foggy weather.

Attended and exhibited model.

1850, February.—M. Thompson, H.M.S. "Odin." A paper descriptive of general night signals which have been tried and much approved in the fleet, and which he considers adapted also for lighthouses.

Thanked for his communication, and informed, that although his plan may be found useful for purposes of ships and boats, it does not appear to Elder Brethren that it would be so for those of lighthouses.

1850, February.—W. H. Smith, Royal Exchange Buildings. A yielding lighthouse, which shall offer the minimum of surface and the maximum of resistance to the wind draught and stroke of the wave.

1850.—Models inspected by Deputy Master and several Elder Brethren.

February.—Informed that it is not the intention of the Corporation to make trial of his plan.

March.—Mr. Smith submits estimate of one 100 feet high for 11,500*l.* and enlarges on plan.

Former intimation repeated to him.

April.—Mr. Smith offers to build on his non-resisting principle at Bishop or North Sand Head for above sum, payment to depend on success and approval by our engineers.

Informed that the Elder Brethren are not disposed to entertain his proposition.

May.—Mr. Smith offers to erect at various stations, or in place of any of the light vessels, and requests reference to President of Institution of Civil Engineers.

Mr. Smith referred to previous letters, and informed that views of Board as therein expressed remain entirely unchanged.

1852, February.—John Martin, Chelsea. Renewing proposals made in 1829 with improvements, for guarding the outer edge of sands by a continuous chain of efficient lights one mile apart, without requiring the residence of a man at any one of the stations, in one to five fathoms water, and lighted by means of gas pipe running from shore to utmost extremity of line; also, for building lighthouses on sands upon sunken equilateral triangles, with iron flanges or flat anchors at the corners, &c.

(Mr. Martin memorialized His Royal Highness the Master, who referred it to Board.)

1852, February.—Previous plans adverted to. Light Committee to see Mr. Martin. Light Committee do so. Letter received from Mr. Martin. Report of Light Committee submitted to Board.

March.—Mr. Martin informed that it is not the intention of this Corporation to adopt the plans which he has brought under our notice, and the drawing returned to him. Mr. Martin, in reply, considers that invention has been adopted by Corporation in the construction of Maplin, &c., and requests compensation. Informed that Board cannot consider they have adopted any principle which he can properly call his own.

1852, May.—W. R. Reynell. To have smal attached balloons of sufficient power to raise beacon lights to any required altitude on the Goodwin Sands or other similar dangerous positions on the coast.

Acquainted that his suggestion has been laid before the Board.

1852, May.—S. Coote, Clifton. To warn mariners of sunken rocks, shoals, &c. by hanging up copper pictures of the place, suspended from beams fixed up in

XXVI.

ENGLAND.
Circular I.
Question
XXVI.

conspicuous places. Bells of the description of sheep bells, but larger, and a lantern or two at night.

Prays remuneration.

Informed that it has been laid before the Board, and that it is not the usage to grant remuneration for the production and transmission of the numerous designs which are submitted to the Board's notice.

1853, February.—Dr. M. R. Fletcher, St. Andrew's, New Brunswick. Tidal alarm apparatus.

Thanked for communication; acquainted that plan is not in any way applicable to service of Corporation.

1853, March.—J. Ridley, Hope Coffee House, Faringdon Street. Has several plans for the improvement and safety of ships, &c., one or two of which will come under the management of the Trinity House.

Attended the Board, and submitted sketches illustrative of a plan by which he proposes to conduce to the safety of shipping, by placing beacons of various forms at the entrances of harbours.

1853, July.—George Herbert, Trinity House. Iron collar and apron to prevent the tide from scouring the sand away from the base of piles.

Referred to Mr. James Walker, the Corporation's engineer, recommended by him for trial; adopted at Mucking.

1854, January.—J. W. Dilke. Telegraph wires to light vessels; transmitted by command of His Royal Highness the Master.

His Royal Highness informed that Board consider the swinging of light vessels would cause great difficulty, and that ships in inside channels driving and dragging anchors would grapple wires; and that light vessels are furnished with signal guns, rockets, &c.

1854, November.—T. McBean, Uitenhage, Cape of Good Hope. That he has written a treatise that lighthouses are false and dangerous, and requesting Corporation to publish the same.

1855.—Acquainted that we are unable to assist him.

February. Mr. McBean acknowledges receipt of our letter.

July.—Acknowledgment read.

1855, April.—W. Fletcher, Lightkeeper, Caldy. For improvement in construction of lighthouses generally, and particularly Caldy.

In these plans the lighthouse dwellings are clustered round the tower like the pedestal of a column, with a method of ventilation similar to one proposed by him in 1850, when at Burnham, for which, it having been found to answer, he received in 1853 a gratuity of 10*l*.

Receipt of plans acknowledged. Mr. Fletcher informed that no change at Caldy is contemplated at present.

1856, January.—N. Douglass. Plan for erecting iron lighthouses at sea. (Proposal annexed.)

The approval of the Elder Brethren at the ingenuity he has displayed therein communicated to him.

1856, November.—J. H. Stoqueler, Russel Court, St. James. That his Patent Elevator, capable of being raised to a height of 100 feet without oscillation, might serve the purpose of an impromptu lighthouse.

To lie on table.

1858, May.—T. Brady, Margate. That lightships on dangerous sands should be fitted with electric telegraph to sound alarm on nearest shore, in case of wrecks in their vicinity.

XXVI.

Board of Trade transmit copy of same proposal for observations.

Acquainted that suggestion has been laid before the Board.

1858, May.—A. and M. D. Grissell, Hoxton. That cast-iron towers are by far the best construction for lighthouses, whilst their endurance is equal to stone, and that 5,000*l*. or 6,000*l*. would erect a second-class lighthouse and dioptric light in any part of England.

(These observations were contained in a letter, wherein Messrs. Grissell invited the Elder Brethren to inspect a lighthouse they had constructed for the Russian government.)

1859, January.—Lewis Gompertz. A substitute for lighthouses. Instead of having a building with a light at the top, to employ a small balloon of sufficient power to support a lamp to be hung under it, and being attached by a string to a post or barge, the string to be of great length, a mile or more if necessary, so that the light would be seen very far, &c.

To lie on table.

1859, August.—Capt. Acklom, Jersey. Self-acting tide pilot and beacon lights, designed for Elizabeth Castle Causeway, but capable of universal application, by tidal float acting upon gas lever cock, and turning on or shutting off a large double batwing burner, to be kindled by a small burner constantly burning.

Acquainted that Elder Brethren cannot depart from the usage of the Corporation, in abstaining from the expression of an opinion in respect of any invention with the merits of which they have no practical experience.

Fog Signals.

1848, September.—Mr. Walker, Queen's Harbour Master, Plymouth. On the subject of the bell at the Breakwater lighthouse, suggesting a method by which he considers the sound may be conveyed.

Mr. Faraday consulted thereon; not carried out.

1848, December.—Admiralty. Calling attention to Mr. Wells' instrument for producing shrill sounds by atmospheric pressure, propose trial at South Foreland.

1849.—Arrangements made for trial from 29th January to 3d February; persons in charge at North and South Sand Head and Gull Stream lightvessels directed to report. Admiralty advised. Admiralty give directions to officers of coastguard float and on shore to report. Committee of Elder Brethren observe in the "Vestal." Sound to be heard on board yacht at 2³/₁₀ miles very faint; not heard from South Sand Head or Gull Stream, nor at Ramsgate, Deal, or Dover.

February.—Mr. Wells states, that he heard it from South Sand Head, and that machine was not previously in order.

Result reported to Admiralty.

Admiralty request our opinion thereon.

Admiralty informed that we consider instrument capable of producing loud and penetrative sound, subject to influence of wind; that sound may be produced without delay, and may be continuously maintained.

March.—Mr. Wells states that he has constructed a larger whistle, should we desire a further trial.

Mr. Wells informed that experiment was made solely at request of Admiralty, and that we do not contemplate any further proceeding unless Admiralty desire it.

XXVI.

1850, October.—Mr. George Wells, Upper East Smithfield. Submits improvements which he has made in his patent fog screamer.

Referred to Light Committee.

1853, October.—Mr. George Wells, Upper East Smithfield. Proposing to submit fog signal.

1853, January.—Appointment at this house.

March.—Committee report to Board as to its applicability to light establishments.

May.—Professor Faraday reports on it.

Mr. J. Walker reports on it.

Ordered for trial on board lightvessels.

September.—Report of comparative trial on board "Mouse" light. A good-sized bell, struck sharply by machinery, considered to surpass any mode yet tried.

1854, January.—Mr. Wells requested to remove apparatus from Buoy Wharf.

1850, April.—J. G. Woodward, Cecil Street, Strand. Submitting proposal for a bell (Jones's) which shall be rung instead of struck; adopted by Lighthouse Commissioners in New Brunswick; prays compensation for expenses.

1850.—Model inspected; further examination deferred.

24th April.—Mr. Woodward acquainted that we decline to grant compensation: that we may possibly make practical trial of apparatus on board lightvessel, but have not at present decided to do so.

1853, March.—Admiralty. Transmit suggestion from Lieutenant Synes, R.N., that fog bells should be fitted at all lighthouses.

1853, March.—Acquainted that bells have for some time been in use at several lighthouses, and that each lightvessel is furnished with a gong; that Elder Brethren are at present disposed to doubt whether bells would be useful at all lighthouses, but that it is still undetermined whether a bell or shrieking instrument will be best for fitting at those stations where they may be likely to be of service.

At this time the Board were in communication with Mr. Faraday as to the application of reflectors in connexion with the use of fog bells or whistles, and in August remitted it to the Light Committee to consider best mode of striking bells.

A large bell, made by Messrs. Mears, was placed at the South Stack. Mr. Faraday was consulted as to construction of belfry for sound, and Mr. E. Cooper, C.E., submitted method for sounding the bell. This bell was subsequently disused, and maroons and fog guns tried in its place.

1854.—Grubb and Co., Dublin. Mode of ringing fog bells.

Thanked for communication. Informed that Board have already decided on another plan.

1857.—Grubb and Co., Dublin. Renew proposal.

1854, October.—A. Todd, Manchester. Suggestions for striking gongs by the agency of the revolving apparatus in lighthouses.

Thanked for communication.

1855, April.—Lieutenant Cook, R.N., Addiscombe. Model of machine for sounding alarm in foggy weather.

Machine exhibited. Expense of model 1*l.* 6*s.* 8*d.*, defrayed by Corporation.

1855, November.—By order of Board. Particulars requested relative to fog bells from United States Lighthouse Board.

1856, October.—Received. Thanks returned.

XXVI.

ENGLAND.

Circular I.
Question
XXVI.

1856, March.—F. Millen, King's Cross. Has a plan for increasing sound of bell by ringing instead of striking, which has been approved.

April.—Requested to state by whom.

Attended and explained plan. Requested to ascertain cost of sufficiently large working model.

1857.—Barbarin and Sims. Electro-magnetic fog bell (transmitted by Board of Trade).

Referred to Professor Faraday, who reported thereon. Board of Trade informed of reasons against adoption.

1857, April.—Board of Trade transmit plan by B. S. Sawden. For working fog bell on Flamborough Head.

1857, April.—Board of Trade informed that it appears to be similar to that already in constant use.

1857, September.—Chamber of Commerce, Hull. With reference to a fog bell at Flamborough Head. Direct our attention to a plan for sounding one on that headland, published by Mr. Milne, of Bridlington, about 1815.

1857, October.—Board of Trade. Trial of maroons for fog signals, as suggested by Captain Boxer, R.A., of the Royal Laboratory, Woolwich.

1857.—A communication was opened with that officer, and experiments were made at Holyhead and at Woolwich, which resulted in proving large maroons to be very costly, and in the expression of a suggestion of Captain Boxer's for a very simple gun arrangement, not requiring the employment of more than one man.

Committee conferred with him thereon, and considered relative cost. This plan has not yet been adopted.

1858, September.—Board of Trade. With copy of dispatch from New Brunswick, relative to improved fog gun to be fired by clockwork, and copy of proposed reply to Colonial Office.

Acquainted that we concur generally as to proposed reply, and informed of present state of negotiations with Captain Boxer, relative to maroons.

1847, February.—Alexander Gordon, C.E., Fludyer Street. The production and distribution of sound to indicate the proximity and position of lighthouses, lightvessels, beacons, and buoys.

Not specially considered; submitted with other propositions, for which, see "Section, Lighting Apparatus," p. 38.

The question of best sort of fog signal still engages the serious attention of the Board,

A committee has recently inspected the mode of striking fog bells in use at certain Irish lighthouses; and another has visited Boulogne, for the purpose of observing an adaptation of fog signals at that port.

APPENDIX.

LIST of Papers herewith:

Report from Mr. Faraday relative to magneto-electric light.

Mr. Wells's plan for a telegraphic lighthouse.

Mr. Aston's plan for distinguishing lights.

Mr. Douglass' plan for iron lighthouses at sea.

Lieut. Manico's plan for caissons de fer.

P. H. BERTHOE,

Trinity House, London,

Secretary.

25th November, 1859.

Note.—The return was made in the form suggested, but it was found more convenient to print it as above. Several of the suggestions are omitted, because without drawings their merits cannot be appreciated.

ENGLAND

Circular I.
Question
XXVI.

XXVI.

By ROYAL LETTERS PATENT.

IMPROVEMENTS in LIGHTHOUSES, BEACONS, &c. for marine banks or rocks of any description, either tidal or totally submerged in any situation required for the purposes of commerce; also applicable to the construction and erection of piers, breakwaters, batteries, and other similar erections.

By N. DOUGLASS,
Engineer.

Having been requested by the late Deputy Master and some of the Elder Brethren of the Honourable Corporation of Trinity House to turn my attention to a plan for erecting a lighthouse on a rocky shoal in the English Channel, I have planned and matured a more certain and effective mode of obtaining a foundation and raising a permanent structure on a bank of any description, whether soft material or the hardest rock, which at once removes all the usual delay and uncertainty attending the erection of such structures of which the inventor has had near 30 years experience.

I employ wrought or cast-iron cylinders, which, to render imperishable in salt water, I enclose in an outer casing of iron or zinc, with a space between filled with bitumen, run in hot, so that when the outer casing is entirely destroyed, the main cylinder is enclosed in an impermeable material. The cylinders I construct on shore, and fit with temporary water-tight bottoms; they are then to be fitted into a raft or pontoon of a peculiar construction in their proper position, and so that they may be let down through the raft to any depth. The raft to be formed of large wrought-iron cylinders, with all necessary staging, cranes, and workmen's barracks, &c. erected thereon, and the whole to be floated to the proposed site for the erection; the cylinders are then let down through the raft on to the bank and filled, thereby forming a temporary structure for further operations. If required on a bank of loose material, I proceed with the cylinders one or more at a time, as follows:—The bottom is first to be removed, and the material excavated either by a dredging machine misering or digging, or any other method, depending on the nature of the ground, the cylinders being sunk to any depth, as in well or shaft sinking for mines, until a proper strata is arrived at for the foundation, so as to be safe from any future shifting of the bank.

To give the cylinder increased bearing surface for either upward or downward strain, I let down to the bottom of each a cylindrical foot with hinged flanches, which on being drawn up against the bottom spreads out and gives any extra bearing surface; required; the cylinders are then to be filled up with cement, concrete, or any other approved material, and connected together above high water in a solid body, without the use of stays of any description; upon this can be raised any superstructure desired.

If required on a rocky bottom, after obtaining a temporary fixing on the site as before, the cylinders are to be fitted with temporary man-holed covers, and air forced into them, thereby expelling the whole of the water, and enabling the workmen to go down and cut the rock to obtain a proper fixing; the cylinders are then to be filled and connected together at the top, as before, for receiving the superstructure.

London, 1st January, 1856.

PLAN and SUGGESTIONS for a Telegraphic Lighthouse, as an improvement on the present lighthouses, by GEORGE WELLS, Esq., of the department of the Admiralty, Somerset House.

The numerous, serious, and fatal accidents that vessels, and particularly steam ships, have encountered within the last few years, owing, in many instances, to the mistakes of mariners as to the distance and position of the several lighthouses which abound on our dangerously navigable coast, render it unnecessary to waste any time in an attempt to prove that there must be something radically wrong in the construction of these beacons of the deep, and the mode of warning for which they are intended.

It is not enough that they are based upon the several points of danger, whether shoals, sands, or rocks, so long as the possibility exists of their being mistaken one for another, which, unhappily, from the want of a more distinctive character, has been too frequently the case, involving the sacrifice of life to an awful extent, and the minor, though heavily injurious, loss of property.

To remedy such frightful evils, the inventor of the telegraphic lighthouse has long and anxiously turned his attention, and now offers to the government of the country a plan, which, by giving to every lighthouse a *determinate and unmistakable character as to its position*, must, with

XXVI.

the slightest ordinary care, prevent the recurrence of the dreadful disasters referred to.

The existing lighthouses are objectionable in three particulars:—

First. Their unnecessary elevation, which gives them the appearance of being at a greater distance than they really are,—a dangerous delusion.

Second. In giving coloured lights to some, which is worse than useless, as in hazy or foggy weather the density of the atmosphere creates such an optical illusion, as completely to vary all description of colour, and consequently to lead the seaman to hesitation, and thence, too often, to destruction.

Third. The general insufficiency of the light, and its similarity in appearance, which not infrequently misleads the mariner as to the actual locality of the lighthouse and the course of his ship; as was evidenced, amid many other instances, in the fatal disaster that befel the unfortunate "Great Britain," though under the guidance of an experienced sailor as ever tried a plank.

To obviate such awful and afflictive mischances, the telegraphic lighthouse now under consideration is suggested as a *safe and unerring substitute* for the present system, being, from its *pointed designation, simplicity of intelligence, and clearness of character, totally secured from any possibility of misapprehension*, having the further advantage of being understood by mariners of all nations.

The process of the proposed change in the existing lighthouse is exceedingly simple, and the expense of it comparatively trifling, bearing in mind the security it would insure; being no more than the cutting four or more circular apertures in all the present erections, just below the lantern, and fitting the openings with glazed sashes of ground plate glass, with the initial letter of the particular lighthouse painted in an opaque colour thereon, the light being so reflected as to render the *unpainted* glass transparent, and thus exhibiting the letter itself in bold relief, as shown by the letter *J* in the vignette.

The length of the letter being twice the size of the light of the lantern would be more clearly visible, and leave no doubt as to *what* the lighthouse is, and *where* situate. "Tis the few moments lost in thinking what lighthouse it is, that allows the ship to be drawn by wind or current upon the iron-bound rock, where all are lost."

This alteration is suggested for the existing lighthouse, but where it might be necessary to construct new ones, it would be better they should not be carried to the present altitude, as the nearer the light is level to the eye, the less probability would exist as to any mistake in the distance of it.

The model of this proposed lighthouse has been exhibited at the sires of the Marquis of Northampton (President of the Royal Society), and was honoured by the *especial* notice of His Royal Highness Prince Albert, and many scientific persons present. The press has also declared its approval of the proposed plan.

GEORGE WELLS,
Admiralty, Somerset House.

By HER MAJESTY'S ROYAL LETTERS PATENT.

CAISSON DE FER, for obtaining foundations for marine and other structures.

The caisson de fer is three feet square, made of three-inch by half-inch flat bar iron, put together with three quarter-inch screw bolts and nuts, and when filled with rough stones, and the interstices with sand, weighs upwards of two tons.

These caissons de fer, possessing the power of arresting the violence of the sea, can be advantageously used on any exposed coast, where vessels are so frequently lost, when caught in bad weather, for want of a place or shelter to run for. They are also well adapted for the construction of floating docks or canals, reclaiming land washed down by the sea, and especially for erecting works on dangerous sand banks. For this purpose they are intended to be let down on the bank, into which they will subside to the foundation, the sand filling in whatever space may be left between them. In this subaqueous work is securely retained the alluvial deposit which is constantly agitated by the currents, and a solid increasing embankment is hereby created, whereon any superstructure may be raised with perfect safety; affording efficient protection to shipping by these means in less time and at less cost than any harbour work on the coast.

E. MANICO, Lieut., R.M.,
Inventor and Patentee.

RETURN to Requisition, dated 3d May 1859,

FOR

“ All Correspondence between the Trinity House and the
 “ Board of Trade relative to the Debt due to the
 “ Bank of England for Monies borrowed for pur-
 “ chasing Lighthouses;” also for, “ Copies of all
 “ similar Correspondence relative to Proposals for the
 “ Reduction of Light Dues made by the Trinity
 “ House to the Board of Trade.”

No official correspondence has passed between the two Boards.

The Debt due to the Bank of England was incurred at a time when money was comparatively cheap, with a view to pay off or reduce the debt to Her Majesty's Treasury and outstanding bonds to sundry individuals, which were bearing a higher rate of interest.

The general debt incurred by the Corporation for the purchase of private lights under the provisions of the Act 6 & 7 William IV. c. 79. amounted to 1,182,546*l*. This sum was obtained from various sources, and was gradually repaid at the rate of 7,500*l*. per annum (with one exception) until 1844, from which time repayments were made at a much larger rate, viz.—

		£		s. d.	
In 1844	—	74,000		181,498	2 4
1845	—	141,000		62,381	13 4
1846	—	129,000		71,081	4 7
1847	—	107,500		87,000	0 0
1848	—	119,500		45,000	0 0

And at the time when the Merchant Shipping Act came into operation (October 1853) the sum of 67,500*l*. alone remained to be liquidated.

Before October 1853 the power to reduce light duties rested with the Trinity House, subject to the assent and confirmation of Her Majesty in Council; and although the Board of Trade, as being the Committee of the Council to whom the propositions of the Trinity House would be

referred, may have been communicated with on the subject, no official correspondence took place.

The questions of the Corporation's debt and of the reduction of light dues have this bearing on each other, that the power to reduce and alter light duties under the 56th and 57th section of the Act 6 & 7 William IV. c. 79. was a continuation and extension of the power to reduce, previously and for the first time given to the Trinity House by the 4th section of the Act 3 Geo. IV. c. 111, its exercise having been limited, so that it should be “ consistent with the charitable and other purposes and intents “ for which the said Corporation has been established and “ maintained,” and that the debt above adverted to was secured upon the surplus dues; until, therefore, the bulk of it was discharged, the Elder Brethren were not in a position to effect any extensive reduction in the rates for lighthouse tolls, although in 1843, as a measure of immediate relief, a reduction was made on oversea and coasting vessels amounting to about 80,000*l*. per annum, and in 1852 the rates, for coasting vessels only, were further reduced to the extent of between 30,000*l*. and 40,000*l*. per annum.

The amount unliquidated in 1854, viz., 67,500*l*., was repaid in moderate instalments, and being comparatively trifling the Board of Trade were then enabled to carry into immediate effect reductions which the Corporation had for a long time contemplated as the result of the liquidation of the debt.

These reductions have not been so extensive as regards English lighthouse tolls as might have been the case had the revenue arising therefrom not been carried to a common fund upon which the charges of the three lighthouse boards have been consolidated.

Since 1853 the initiative in reductions has always been taken by their Lordships under the provisions of the Merchant Shipping Act.

Trinity House, London,
3d February 1860.

P. H. BERTHOE,
Secretary.

Dues complaints.

DUES, &c.

(Part of Answer to No. XIX., Lighthouses General Return; No. XX., Floating Lights General Return; and entire answer to *h, i, j*, No. XXIV., Return on account of Buoys and Beacons.)

General Remarks. (In answer to Questions XLV., XLVI., XLVII., Lighthouse Special Return; LII., LIII., LIV., Floating Light Special Return; XXIV., *h, i, j*, Buoys and Beacons.)

Complaints or representations as to “ Tariff of Dues,” “ Overcharge,” or “ Mode of Collection,” are seldom made against particular lights; the three which have occurred since 1st October 1853, one for the Owers, one for the Eddystone, and one for the Bardsy, are given in their places; the objection of the Corporation to the imposition of a toll for the Bishop is also stated in the return for that light.

The complaints or representations of a general character have been as follows:—

First, as to Tariff of Dues.

December, 1853; July, 1854; April, 1856. Representations as to light dues, or refusals to pay them, were received on account of vessels with limestone, chalk, &c., at Truro, Milford, and Woodbridge respectively. Explanations were given, and a rule enforced that vessels should be charged provided they have more on board than is sufficient for purposes of ballast, say one third of tonnage.

March, 1854. The Newcastle, Shields, and Gateshead Chamber of Commerce (to Board of Trade) propose (1) that lights should be maintained from general resources of the country; or,

That no further sum should be levied in shape of light dues than may be requisite for maintenance.

(2) That duties be only payable in proportion to the quantity of merchandize carried, and that minerals of small

DUES, &c.

value, in proportion to their bulk, such as coals, stone, and the like, should only be subject to half dues.

Reply.—(1) That Elder Brethren consider present system of charging vessels for lights actually passed the most equitable principle; that, in other countries were lights are maintained out of the general revenue, vessels are subject to a tonnage duty, which is applied to general purposes of the state.

That present revenue (1854) is little more than adequate to meet expenses.

(2) That plan would be found most inconvenient and embarrassing, and could not fail to be constantly productive of disputes between the collectors, and masters, or agents, and would tend to encourage fraudulent evasions.

February, 1859. The Newcastle, Shields, and Gateshead Chamber of Commerce (to Board of Trade) propose that vessels carrying cargo to the extent of not more than one-tenth of their register tonnage may be exempted from payment of light dues; the present system causing nearly every one of the hundreds of French vessels which come to the north-eastern ports for coals, to come in ballast; and nearly every one of the hundreds of British vessels which carry coals to the northern ports of France, to return to the Newcastle district in ballast.

Reply.—Elder Brethren of opinion, that present charge for light dues for return voyages from the north-eastern ports of France, does not operate as a total prohibition to the carrying freight; the amount of duties chargeable on a vessel of 200 tons for the voyages in question being, to or from Dunkirk, fourpence; to or from ports south of Dunkirk to Dieppe, ten shillings and fourpence; to or from ports west of Dieppe to Havre, fifteen shillings and fourpence; and that it would not be practicable to carry out an exemption from payment of light dues in favour of vessels having only a portion of their tonnage on freight.

April, 1859. Chamber of Commerce (1) demur to accuracy of figures, and state that either Trinity House have very

DUES, &c.

grossly mis-stated facts, or Custom House, Newcastle, very grossly overcharged vessels.

(2) Do not consider objection of Trinity House as to practicability worthy of a moment's notice; that it would be an insult to officers of customs to suppose they would not be capable of protecting the lighthouse fund.

Reply.—(1) Elder Brethren point out that duties for lights, &c. on east coast, with the exception of those for "Tees buoys," are payable once only for the whole voyage out and cargo and that, consequently, a vessel of 200 tons carrying home; to Dunkirk may return to any north-east coast port, fully loaded, at a charge of fourpence only, and from the other ports as stated.

(2) Elder Brethren reiterate opinion that it would not be practicable, and have reason to believe officers of customs in London coincide with them.

February, 1855. Messrs. Kemp and Co., Fleetwood, Whether vessels, arriving on a Sunday, and paying dues on the Monday for lights passed on the Sunday, are not exempt from paying again for same lights up till midnight on Monday, under the 24 hours exemption clause, and Sunday being a *dies non*.

Reply.—Acquainted that Elder Brethren do not consider the clause in the tables: ("Vessels are to be charged for one passage only in any one day, although any number of passages more than one may be made; the day to be computed from midnight to the midnight following"); provides for such exemption, either directly or by the most extended application of the words.

November, 1859. The Scilly Islands Steam Navigation Company, trading from Scilly to Penzance, and *vice versa*, pray exemption from light dues one way.

Reply.—Informed that it can only be granted if lights are passed the second time within the 24 hours.

July, 1855; June, 1856. Collector, Faversham. That the owner of certain oyster-boats refuses to pay the commutation.

Reply.—Ordered to be enforced.

August, 1856. Collector, Yarmouth. That a lugger with a bought cargo of salt herrings from Whitby refuses payment.

Reply.—Ordered to be enforced.

November, 1856. Letter from Collector, London, with remembrance from Mr. Saunders, and others, in reply to demand for payment of light duties on vessels bringing into the port of London fish caught by other vessels; the owners claiming exemption from payment thereof under the Billingsgate Market Act, 9 & 10 Vict. cap. 346, sect. 17.

Reply.—Informed that Act quoted is controlled by Merchant Shipping Act, 1854, and that exemption not being in table of light dues, is virtually of no effect; but opportunity was taken to re-consider the whole subject of light dues paid by fishing vessels, and an Order in Council was obtained, enacting that "all vessels, smacks, and boats supplied with ordinary fishing gear, and employed solely in fishing, shall be exempt from the payment of light dues whilst they are employed in carrying to port fresh fish from the fishing grounds."

March, 1859. Collector, Shoreham. That owner of an oyster-vessel from Jersey, pleads exemption under commutation payment from Jersey to Stangate.

Reply.—Dues to be charged from Jersey to his port, unless vessel is *bonâ fide* a fishing vessel carrying fresh fish to port.

October, 1855. Mr. W. S. Day, agent for the "Cornelis Gips," from Akyab to Cowes, and thence to Amsterdam, considers that there can be no further charge for light dues beyond Cowes.

Reply.—Acquainted with liability for lights, which ship must pass in prosecuting voyage to completion.

May, 1857. Collectors at Sunderland and Newcastle represent that vessels clear for Rotterdam and Archangel; the latter port being inserted in order to obtain a larger amount of duty-free stores.

Reply.—Instructed to charge light dues on that voyage on which most lights are passed, and that question of repayment on ground of vessels adopting nearest port will be taken into consideration, upon evidence of having done so and discharged all the cargo there.

DUES, &c.

February, 1858. Messrs. Lange, Brothers, request return of lights on a vessel which cleared from Newcastle for Rotterdam and Odessa, but proceeded only to Rotterdam; clearing for Odessa for the purpose of obtaining a larger quantity of bonded stores.

Reply.—The corporation's solicitor consulted; vessel held to be bound by clearance; application for return not complied with.

June, 1857. Messrs. Dunlop and Schwabe, agents for the Vanderbilt Steam Line. Conceive that the "North Star," and other vessels from New York to Cowes, and thence to Havre and Bremen, should only be charged lights as far as Havre.

Reply.—Informed that dues are properly and legally chargeable to Bremen; but that if whole of cargo, and all the passengers are landed at Havre, the board will consider question of return.

October, 1857. Application from Mr. Clift for exemption of dues on the "Eagle," which put into Falmouth, with loss of spars.

Reply.—Collector reports, that although the vessel had lost her spars as represented, she came to Falmouth for orders, which on her arrival she received. Dues to be levied.

June, 1858. Collector, Cowes, reporting that a Belgian vessel had refused to pay dues when calling for orders, "she not having entered the port or cast anchor."

Reply.—Owner acquainted with his liability through the British Consul at Antwerp. Amount paid.

March, 1857. Mr. Churchward, Dover, claiming exemption from dues on the "Vivid" and "Princess Alice," "vessels *bonâ fide* the property of Her Majesty."

Reply.—Found to be lent to the contractor for commercial and postal purposes. Dues ordered to be charged.

November, 1858. Agent to manufacturers of submarine telegraph cable, praying exemption from dues on vessels employed in laying cable in North Sea.

Reply.—Regarded as liable.

March, 1856. Board of Trade informed of corporation's practice of many years' standing of allowing a commutation on transports taken upon monthly pay, and requested to sanction continuance thereof, under present altered circumstances of disposal of lighthouse tolls.

Reply.—January 1857. Board of Trade state that they have been in communication with Admiralty, who concur with them in thinking that ships taken up by Government, should be placed on the same footing as to payment of light dues as all other merchant vessels; but that change should not apply to vessels now under contract, and that due notice should be given.

1856. In 1856, the method of checking the clearances of coal ships from the north-eastern ports to foreign destinations, by examination of reports of arrivals in the "Shipping Gazette," being under review, and there being reason to believe that many vessels cleared short of the voyages on which they actually proceeded, an arrangement was made (in 1857), through the instrumentality of the Board of Trade, by which British consuls at foreign ports furnished lists of English vessels arriving thereat, a suggestion was made to the Board of Trade that these consular returns should include *foreign* vessels from English coal ports, but—

Reply.—Board of Trade think it objectionable to invite aid of foreign governments to recover British light dues evaded by their vessels, and having regard to difficulty of recovery, do not think it worth while to put Her Majesty's consuls to the additional trouble.

These foreign vessels are accordingly still traced by reference to "Shipping Gazette," and any evasions recovered upon next appearance of vessels in this country.

December, 1853. Collector, Shoreham, observes upon reductions in light dues by percentage abatement, "would it not be better to adopt the principle of the penny postage, and adopt the charge per vessel, thus: vessels coastwise under 50 tons, 3d.; from 50 to 100 tons, 6d., &c., &c., which would avoid fractions and complication in the accounts. Something similar might be adopted as to oversea vessels."

Reply.—Read.

Dues complaints.

DUES, &c.

Second, as to Oercharges.

The following classification of the repayments in the years 1857 and 1858 is submitted:—

	No. of Vessels.	1857.		No. of Vessels.	1858.	
		£ s. d.			£ s. d.	
Charges made by collectors in error	143	130	16 3	141	151	13 10
Charges correctly levied in the absence of the previous light bill, but returned upon its production	60	121	3 0	53	284	17 8
Charges correctly levied for voyages which were afterwards abandoned	37	201	1 4	43	172	0 11
Charges correctly levied on vessels which were afterwards wrecked	20	80	2 7	20	44	15 11
Charges correctly levied on stated tonnages, but returned on re-measurement	16	23	6 7	30	45	13 3
Charges on outward bound ships for "the usual course," when two or more are open, but returned on evidence of deviation	31	131	18 1	37	167	0 9
Charges on vessels putting into port in distress, but discharging cargo for repair, return being made if cargo is entirely re-shipped, and vessel proceeds on original voyage	1	3	5 2	1	9	5 11
*Charges made on vessels treated as with cargo, but returned by order of Board	4	32	2 4	5	18	9 5
Total	315	£724	15 4	370	£803	17 8

*The particulars of these nine vessels are as follows:—
 April, 1857.—"Forest City." Ten bags of ram, four hogheads of vinegar, excess stores, with some silks, the property of the captain, allowed by customs to clear as in ballast, 200 tons of ballast on board.
 May, 1857.—"Marmora." A few dozen of Bordeaux in bottles, to owners' use.
 July, 1857.—"Laurel." Less than one third of tonnage of cliff stone as ballast.
 October, 1857.—"Bertha." Four boxes and two vases of artificial flowers, and four cases of glass toys belonging to crew, and not for sale.
 February, 1858.—"Sarah." One bundle containing a sail for another vessel not on freight.
 March, 1858.—"St. Croix." Sixty tons of shingle as ballast.
 July, 1858.—"Meteor." Three crape shawls in captain's baggage intended by him as a present for his wife.
 November, 1858.—"Maria Elizabeth." One case of jewelry, value 15*l.*, personal property of captain.
 November, 1858.—"Cuirant." 112 lbs. of tobacco, ships stores, vessel otherwise in ballast.
 Five vessels of a similar character were exempted from dues in the years 1857 and 1858, and applications for exemption or repayment on 11 vessels were refused, the quantity or nature of goods on board bringing them properly under the meaning of vessels with cargo.

Third, as to Mode of Collection.

April, 1858. Mr. Hutchinson, Hull, that the steamer "Ilawk," from Hull to Bristol, is greatly delayed by having to pay lights at Plymouth, on calling there for orders, in consequence of arriving and departing from thence after official hours, and requesting that payment may be made at Hull.

Reply.—Informed that it is contrary to regulations to charge a coasting vessel at the port of clearance; but that instructions have been given to pass the vessel at Plymouth and charge full dues for the whole voyage at the respective ports of ultimate discharge.

February, 1857. Messrs. Garratt and Gibbon refuse to pay light dues at the Motherbank on two oversea vessels anchoring there for orders, the masters receiving instructions to discharge at a British port.

DUES, &c.

Reply.—Informed that security of revenue requires that duties should be collected from all vessels touching for orders at the Motherbank, even though bound to British ports.

July, 1858. The practice at the western channel ports as regards vessels calling for orders, and declaring their ultimate ports of destination to be British, was to charge for those lights only which had been actually passed, leaving the collector at the ultimate port to receive the remainder; but it appearing that no security existed against the vessels completing their voyages to foreign ports instead of to British, and so evading further charges, an order was issued, "that light duties upon all vessels calling for orders shall be paid at the port where the orders are received, both for lights already passed, and also for those which must necessarily be passed in the prosecution of the voyage to the port of ultimate destination."

This regulation caused the following representations and replies:—

July, 1858. Mr. Phelps, of Plymouth, to collector, objecting on ground of delay caused, and because regulation puts masters to expense of obtaining money at high rate of commission.

Reply.—Regulation must be enforced, but not to take effect until 1st October.

August, 1858. Messrs. Hill, Plymouth, object on ground of delay, and question legality of charging lights not then passed.

Reply.—That on careful consideration of whole matter, Elder Brethren are under necessity of adhering to regulation.

October, 1858. Mr. S. Ward, United States Consul, Bristol, in applying for a repayment observes that much inconvenience arises from regulation, and that it subjects American vessels to consular fees, which could otherwise be avoided were the dues paid at port of discharge.

January, 1859. Messrs. Hudson and Sons, Sunderland, request that light duties for the whole of an oversea voyage, to ports in England, may not be charged at the intermediate port of call.

Reply.—Informed that present arrangement has been found necessary, regret that their request cannot be complied with.

July, 1859. Collector, Scilly, that many masters refuse, and make objections, when called upon to pay the duties. Requests copies of the notice.

Reply.—Copies sent.

September, 1858. Collector, Poole, that agents, and others, object to payment of dues prior to reporting vessel, and to know if he can refuse report until light dues are paid.

Reply.—Solicitor advises that Merchant Shipping Act does not justify his doing so, but that dues can be demanded immediately on becoming due, and failing payment, the ship detained on.

Trinity House, London,
11th April 1860.

P. H. BERTHOE,
Secretary.

CIRCULAR No. II.—LIGHTHOUSES.—GENERAL RETURN.

ENGLAND.
Circular II.

I. The Corporation of Trinity House of Deptford Strond, Trinity House, London, E.C.

II. List of Lighthouses under the superintendence of the Trinity House:—

1. Fern Inner, High.
2. Fern Inner, Low.
3. Fern Outer, Longstone.
4. Coquet.
5. Tynemouth.
6. Whitby, North.
7. Whitby, South.
8. Flambro'.
9. Spurn High.
10. Spurn Low.
11. Hunstanton.
12. Cromer.
13. Haishro' High.
14. Haishro' Low.
15. Winterton.
16. Lowestoft High.
17. Lowestoft Low.
18. Pakefield.
19. Orford High.
20. Orford Low.
21. Harwich High, Upper Light.
22. Harwich High, Lower Light.
23. Harwich Low.
24. Langward Fort.
25. Gunfleet.
26. Maplin.
27. Chapman.
28. Mucking.
29. North Foreland.
30. South Foreland High.
31. South Foreland Low.
32. Dungeness.
33. Beachy Head.
34. St. Catherine's.
35. Needles.
36. Hurst High.
37. Hurst Low, Upper Light.
38. Hurst Low, Lower Light.
39. Portland High.
40. Portland Low.
41. Caskets, St. Peter's.
42. Caskets, St. Thomas.
43. Caskets, Dungeon.
44. Start.
45. Start Lower Light.
46. Plymouth Breakwater.
47. Plymouth Breakwater Lower Light.
48. Eddystone.
49. Falmouth Harbour.
50. Lizard Eastern.
51. Lizard Western.
52. Longships.
53. St. Agnes, Scilly.
54. Bishop, Scilly.
55. Godrevy.
56. Trevoze Head High.
57. Trevoze Head Low.
58. Lundy High.
59. Lundy Low.
60. Bideford High.
61. Bideford Low.
62. Burnham High.
63. Burnham Low.
64. Avon.
65. Usk Upper Light, the Bright one.
66. Usk Upper Light, the Red one.
67. Usk Lower Light.
68. Flatholm.
69. Nash Eastern or High.
70. Nash Western or Low.
71. Caldy.
72. St. Ann's Head High, Milford Haven.
73. St. Ann's Head Low, Milford Haven.
74. Smalls.
75. South Bishop.
76. Bardsey.
77. South Stack, Upper Light.
78. South Stack, Low (occasional) Light.
79. Skerries.
80. Menai.
81. Air.
82. St. Bee's.
83. Heligoland.
84. Gibraltar.

(A Chart was furnished.)

III. Position embracing largest arc of horizon and best indicating the dangers of the locality.

IV. Entirely dependent on locality.

V. Dioptric, first, second, fourth, and sixth order. Catoptric.

VI. Dependent upon the extent of the arc to be illuminated.

VII. Fixed, revolving, flashing, and intermittent.

VIII. Dependent upon lights in the vicinity.

IX. Attached.

X. Small lithographic drawings sent.

XI. The stores usually supplied by public advertisement are oil, the London supply of coals, cordage, canvass, and ship chandlery. Those procured by competition from several well-known firms are provisions, paints, white lead, soap, tallow, and olive oil, packing cases, coals for districts, uniform clothing, cleaning stores, &c. Chain cables of special manufacture are supplied upon an annual price list by Messrs. Lenox, and lighting stores also upon a price list by Messrs. Wilkins. The oil is tested by comparison with that of the previous year which has been found of good quality. Chain cables are tested by hydraulic pressure at Messrs. Lenox's, under the superintendence of the Light Committee; other stores by comparison with samples or with previous stock.

XII. Experiments are still in progress with a view of more general adoption of fog signals at lighthouses. Bells are at present used in preference to gongs, and are placed in positions where they can most readily be heard.

XIII. Not in use, except at Bideford, for which see Special Return.

* The "Ordinary Repairs" include charges for ventilating apparatus, the tubes of which require frequent repair.
† At the Spurn Low Light (the only light of this class), the charges being included in those for High Light, separate expense cannot be accurately stated.
‡ These have been given as examples; other catoptric lights have different numbers of burners.

ENGLAND.

Circular II.
Question
XIV.

XIV.

XIV. Nature and dates of any memorials or application for lighthouses on new or old sites, since January 1845, and nature and dates of replies :—

STATIONS IN ENGLAND AND WALES.

1845.

Light on Worms Head.

April.—The Mayor, &c. Carmarthen, proposing one.

The Helwicks lightvessel placed instead, with entire concurrence of memorialists.

1846.

Beumaris Pier.

June.—Council of Borough, requesting sanction for light.

Accorded.

River Ribble.

June.—Directors of Navigation, requesting sanction for light.

Accorded.

Lowestoft Harbour.

July.—Norfolk Railway and Lowestoft Harbour Company, requesting sanction for light.

Accorded.

Banks of Thames, from Woolwich to Nore.

September.—G. M. Goodwin, reverting to proposal made in 1844, for lighting the Thames by means of masked reflectors placed at each angle.

Acquainted that it has been laid before the Board.

Ports of Portsmouth and Milford.

October, January 1849, and March 1852.—G. M. Goodwin, that copy of plans have been transmitted to Admiralty (for lighting by means of masked reflectors).

Receipt acknowledged.

Eastbourne Harbour.

November.—Collector of H. M. Customs, Rye, that it is proposed to erect a light.

Particulars requested.

November.—Mr. W. R. Row, that it is to be a guide for fishing vessels.

Sanctioned.

1857, March.—Clerk of Lighting Inspectors, proposing red coloured lamp at seaside for fishermen.

Have no objection to coloured lamp, but that at Hastings being red, this had better be green.

Newbiggen.

December.—Earl Grey, forwarding memorial from fishermen thereat for a light on Newbiggen Point.

Not considered necessary for general trade, but application for sanction for light will receive consideration.

1847.

Studland Bay, Light on Old Harry.

February.—Collector of H. M. Customs, Southampton, with letter from Mr. J. Goodridge, whose views are concurred in by Mr. Geo. Babot, both being master mariners of long standing, recommending light.

Referred to Committee, who do not recommend its being done.

1860, February.—H. D. Seymour, M.P., with memorial from merchants of Poole for light on or near Durleston Head.

That light in that position must be regarded as a local light, but that Corporation would not offer objection to its exhibition, if placed and maintained by local authorities.

West Hartlepool Harbour.

March.—Dock and Harbour Company, requesting sanction to light.

April.—Bell and Company, furnishing particulars.

Sanctioned.

Blyth Harbour.

March.—Treasury, with representation from Mr. John Stephenson, Pilot at Blyth, as to want of standing light in harbour,
Acknowledged.

LIGHOUSES.—GENERAL RETURN.

XIV.

Folkestone Harbour.

May.—South Eastern Railway Company, requesting sanction for light.

Accorded.

River Lune.

August.—Commissioners of St. George's Quay Lancaster, requesting sanction to light.

Accorded.

Blyth Sand.

October.—Masters of vessels and others, requesting that small light may be placed thereat.

Light ultimately placed on the Chapman.

Fowey Harbour.

November.—Collector of H. M. Customs, that nautical men consider light would be advantageous.

Requested to state how light can be maintained.

1848, June.—Inhabitants of Fowey, requesting that light may be placed thereat.

Requested to state how light can be maintained.

Warkworth Harbour.

November.—Commissioners thereof, requesting sanction to light.

Sanctioned.

Pile Harbour, Lancashire.

November.—Messrs. Nelson and Wynn, requesting sanction to light.

Sanctioned.

1848.

Poole Harbour.

May.—Corporation of the Borough, requesting sanction to light.

Sanctioned.

Littlehampton Pier.

July.—Harbour Commissioners, requesting sanction to light.

Sanctioned.

1850.

Morte Rock.

March.—Lloyd's, forwarding representations in favour of light thereon.

If general trade express wish for light, measures will be taken for its establishment. Buoy subsequently placed.

Forwarded to Admiralty, with observation that two leading lights would appear to be most effectual. (Lightvessel at the Warner ultimately placed.)

Tongue and Goodwin Sands.

April.—T. P. Jordenon, St. Mary-at-Hill, proposing a lighthouse on each of those sands.

Receipt acknowledged.

1851.

Bishop Rock.

January.—C. Moyle, C.E., to place a light in the lower part of the lighthouse at St. Agnes, and reflect it on the Bishop Rock, or to build a small lighthouse on the nearest island sufficiently high as to appear at the same elevation as that of St. Agnes when at two cables' lengths from the Rock.

Accompanied that Corporation; resolved some months since to erect a lighthouse of stone on the Bishop Rock, and that works have been commenced.

Dover Pier.

April.—Town Clerk, requesting sanction to light.

Accorded.

1853.

Breakwater Light.

November.—Mr. L. C. Bailey, R.N., suggesting additional lights, white and green, to lead vessels clear of the Knap, Panther, and Draystone.

A single bright light was placed so as to open immediately on passing the Draystone buoy from the west, and the buoy of the Knap from the east.

Kicker Gill (Warner).

November.—Sub-Commissioners, Portsmouth, with enclosure from Mr. J. Main, pilot, proposing light on the Kicker Gill, or some convenient spot near, as a guide between the Horse Sand and the Warner.

XIV

LIGHTHOUSES.—GENERAL RETURN.

XIV.

ENGLAND.
Circular II.
Question
XIV.

1854.

Llanely Harbour.

March.—Harbour Commissioners, requesting sanction to light on Whitford Sker.
Accorded.

Whitby.

April.—Shipowners at Dundee, Sunderland, and Hartlepool.

May.—Shipowners at Scarbro' and Shields,—recommending light.

Two lights placed.

St. Ives Bay, Stones, Godrevy.

Shipowners, &c., at Barnstaple, Cardiff, Hayle, St. Agnes, St. Ives, St. Mawes, Truro, Waterford Chamber of Commerce.

The Trinity House put themselves into communication with the Board of Trade; an abstract of consequent correspondence is given in answer to Question XVII., and the correspondence itself is set forth in a Parliamentary Paper printed by order of the House of Commons, 8th February 1858.

1856.

Whitby Pier.

February.—Harbour Trustees, recommending that light should be maintained as a general light until proposed lights at High Whitby are established.

Are disposed to comply.

March.—Board of Trade decline to sanction necessary expense.

1857.

St. Alban's Head.

February.—Mr. G. Biddlecombe, R.N., recommending light on Anvil Point, and small lighthouse on Grove Point, Portland, instead of light at Shambles.

Hoped that New Needles may be made available (which has been satisfactorily done).

March.—G. A. Ackers, Esq., recommending light on Anvil Point, and that Old Needles Light should continue to be shown after new one is lighted.

Hoped that New Needles may be made to answer purposes he has in view.

Doubts the New Needles being sufficient.

Penzance Pier.

June.—Town Council, that exhibition should be for all night instead of as at present, when there is only 15 feet water, and that green shade be substituted for red one when the depth of water is less than 15 feet.

Sanctioned.

Bullslaughter Bay.

September.—Rev. W. Allen, recommending light.

Caldy and St. Ann's Lights considered sufficient.

Redcar.

October.—Board of Trade, forwarding letter from the Earl of Zetland recommending light.

Consider that two green lights would be beneficial, and that we see no objection to their exhibition accordingly.

Swansea Harbour.

December.—Trustees, that red light used at the Swivel Bridge only when passage is clear shall be altered to green light when passage is clear and bright red when obstructed.

See no objection, and sanction accordingly.

1858.

Saundersfoot Harbour.

February.—Harbour Master, to exhibit red light at Pier Head in lieu of white one, liable to be mistaken for those in dwellings.

Entirely concur, and sanction accordingly.

Needles and Harst.

June.—Lieut. Hay, R.N., to mark the channel between Warden Ledge and the Shingles by means of blue light from New Needles, and green from High Tower at Hurst.

Acquainted that in judgment of Elder Brethren the light from the Needles, as intended by them, will be sufficient for all practical purposes.

Manacles.

September.—Com. Lory, R.N., recommending light thereon.

October.—Acquainted that, having regard to the vicinity of Lizard and Falmouth Harbour Lights, a lighthouse on the Manacles would be of doubtful expediency, but that experiments are in progress for suitable fog bells, to be applied at various points round the coasts.

1859, October.—Com. Lory, R.N., calls attention to a wreck which might have been avoided had there been a light on the Manacles or the point within.

Acquainted that the Elder Brethren see no reason to alter opinion expressed in October 1858, that the buoy at the Manacles has been recently increased in size, and that having regard to the recent occurrence of the American Ship "Quebec," running in broad daylight on the Eddystone Rock, they are apprehensive that no lighthouse would be effective in counteracting the carelessness displayed by some masters of vessels.

Sheerness, Garrison Point.

November.—Proposal for light.
Concurred in.

Weymouth Harbour Light.

November.—Mayor and Town Council, that light will be discontinued a short time owing to unavoidable accident.

Trust that special care will be taken to exhibit an efficient light in substitution during discontinuance.

Lyme Harbour.

August.—Authorities propose to remove green glass lamp, and place one having a green bull's eye on a plain white ground.

See no objection.

1859, May.—Found not to be an improvement; propose further alteration by placing red bull's eye in room of present green one.

See no objection.

1859.

Carnarvon Harbour.

April.—Harbour Trustees, that they intend to discontinue light.

Requested to state circumstances under which they do so.

May.—Harbour Trustees, that although the light is of general utility, their funds are not sufficient for its maintenance.

Sanction to its discontinuance declined.

June.—Harbour Trustees, requesting further consideration, or that Corporation will take the light.

Light being of local character, cannot properly accept surrender; recommended to apply to Parliament for increase of toll.

July.—Harbour Trustees, representing impediments which exist in applying to Parliament, and expressing hope that measures may be adopted to relieve them of burthen.

Sanction to extinction still withheld; recommended to apply to Board of Trade for satisfactory arrangement of the matter.

STATIONS IN SCOTLAND.

Caitness Coast.

In 1841, the Northern Commissioners had transmitted memorials, &c. for a light on Caitness Coast, and had suggested Sarclett Head. Correspondence ensued; and in 1845 they were advised that the Elder Brethren had examined the locality, and that Noss Head was considered to present the most advantageous site.

1845, May.—Northern Commissioners state that they have appealed to the Privy Council against Noss Head.

Receipt acknowledged.

November.—Northern Commissioners informed that their appeal has been referred to Elder Brethren for report, and copy of said report sent to them.

1846, February.—Northern Commissioners, that Privy Council have directed light to be erected on Noss Head, assume that under circumstances it is not necessary to ask sanction of Corporation.

Trinity House.—Sanction not requisite, but

character of light when determined on should be submitted.

June.—Northern Commissioners request sanction as to particular site and character.

July.—Trinity House.—Approve site; suggest reconsideration as to colour.

Offer to meet Mr. Stevenson at Edinburgh thereon.

October.—Concur in final proposal for revolving light without colour.

1845.

Ardnamurchan.

March.—Northern Commissioners, requesting sanction to light.

May.—Trinity House.—Will inspect.

October.—Sanction.

Cairn Ryan.

July.—Northern Commissioners, proposing to convert beacon into light.

October.—Sanction.

1846.

Coveeen Skerries, Moray Firth.

March.—Northern Commissioners propose introducing red colour on certain bearing.

Trinity House.—Have no objection to offer.

Start Point of Sandy, Orkneys.

March.—Northern Commissioners propose to raise it about 50 feet, and fit improved apparatus.

April.—Approval communicated.

Hoy Sound.

May.—John Robertson, Esq., recommending light therein.

(referred to Northern Commissioners.)

October.—Northern Commissioners propose to erect light on Græmsay.

December.—Sanction given, and to additional light at Clestron to act as a leading light.

Kyleakin.

(See Sound of Skye in 1853.)

October.—Northern Commissioners, requesting sanction to light.

Devaar.

October.—Northern Commissioners, requesting sanction to light.

December.—Granted.

Lochindaal, Islay.

October.—Northern Commissioners, proposing light thereat.

1847, September.—Approved, and recommended that the light should show red in the direction of Laggan Point instead of being masked.

Sanna.

October.—Northern Commissioners, proposing light thereat.

November.—Trinity House.—Removal of Mull of Kintyre light not to be pressed if Sanna be built.

December.—Sanction to Sanna.

1847.

Langness Point, Isle of Man.

October.—Admiralty, transmitting documents in favour of light thereon.

Lights at Calf of Man and at Douglass considered sufficient to avoid dangers off that point.

1848.

North Ronaldshay, Dennissness.

March.—Northern Commissioners, requesting sanction to light, and propose to suspend works at Start, Sandy.

April.—Granted; inquire as to apparatus.

1850.

Arnish Point, entrance to Stornoway.

November.—Northern Commissioners, requesting sanction to light.

November.—Granted.

1852, January.—Northern Commissioners, requesting sanction as to character.

Granted.

1851.

Whalsey, Shetland.

November.—Northern Commissioners, requesting sanction to light on Bound Skerry.

Granted.

1852, November.—Northern Commissioners find that Bound Skerry is very much exposed to assaults of waves, which occasionally pass completely over it. That rock exhibits in some parts proofs of rapid and very recent disintegration, that there would be risk of tower being injured by masses of rock which the sea is frequently detaching and scattering about, and therefore propose change of site to Islet of Gruna.

The season being unfavourable for personal inspection on the spot, and the Elder Brethren being unwilling to be the cause of further delay in proceeding with a lighthouse where one was so urgently needed, and relying on the statement of the Commissioners, were induced to concur in the proposed change.

1854, March.—Northern Commissioners propose temporary light on Bound Skerry during ensuing winter.

April.—Trinity House concur.

July.—A visiting committee of the Elder Brethren inspect the locality, find Bound Skerry in every way eligible for erection of lighthouse, that the sphere which would be illuminated from it seaward to the northward and southward would be much more extensive than from Gruna, (273 against 207,) and that the outer danger, as also the long stretch of foul ground extending from the coast in that immediate locality, would be effectually covered by a light on the outer or Bound Skerry, and not by that proposed on Gruna. A protected site was found a short distance west of the centre of the Skerry, and the sea between it and Gruna observed to be so landlocked as to leave no doubt of the possibility of frequent communication. Under these circumstances, the Elder Brethren could not hesitate as to their duty, but revoked consent given for Gruna in November 1852, and decided on Outer Skerry, on which the lighthouse has since been built.

1853.

Port Gordon.

July.—The Duke of Richmond, forwarding letter from Mr. Balmer expressing wish of fishermen to place two lanterns in line with entrance to harbour.

Informed that controlling power is with Northern Commissioners, and that letter and note have been forwarded to them.

In December 1853, the Northern Commissioners submitted proposals for eight lights at or near Tobermory, Bressay, Cantick Head, Rona, Sound of Skye, Stour Head, Sound of Islay, and Thurso Bay. The Trinity House inquired as to tonnage likely to be liable to tolls, and in January 1854 were of opinion that lights at Tobermory, Bressay, Skye, Islay, and Thurso should be treated as local lights, and that light on Rona might be superfluous if first-class light for Stour Head or Rhu Rhea were placed on the latter headland. The sites were visited in July 1854.

Tobermory, in Mull.

December.—Northern Commissioners. A small light near Tobermory in Mull, to indicate the northern entrance to the Sound of Mull, and at the same time, as far as practicable, to show through the Sound, and open the bay and anchorage of Tobermory.

1854, August.—Elder Brethren of opinion that light should be on outlying north-east point of Mull.

1857, February.—Northern Commissioners send suggestion of Commander Bedford to Board of Trade that green light should extend over arc, including the whole of the rocks between Tobermory and Loch Sanart.

Entirely concur as to range, but unless special reasons exist, think light should be deep red.

(When the Elder Brethren offered this suggestion they had not been apprized by the Northern Commissioners of the character which it had been determined to give the light towards the western entrance of the sound.)

Bressay, in Shetland.

December.—Northern Commissioners, for a small light in the Sound, to open up the entrance to the valuable refuge and anchorage of Lerwick.

1854, August.—Trinity House.—That light should be placed on outermost point of Kirkabisterness.

XIV.

LIGHTHOUSES.—GENERAL RETURN.

XIV.

ENGLAND
Question
XIV.

Cantick Head.

December.—Northern Commissioners, for a light on Cantick Head or Switha Island, Orkney, to indicate the entrance to the anchorage of Longhope and the entrance to Scapa Flow.

1854, August.—Trinity House.—That light should be on Cantick Head in preference to Switha Head.

Rona.

December.—Northern Commissioners, for a small light on northern extremity to open up the Sound of Applecross.

1854, August.—Concur.

Sound of Skye.

December.—Northern Commissioners, for a small light to guide vessels through the southern portion of the Sound of Skye, after losing Ardnamurchan.

1854, August.—Trinity House.—That light should be on extreme point seaward of Isle of Gillian; recommend also for this locality a light on Oronsa, one on Ushenish, and that the beacon on Collochstone Rock be enlarged.

Stour Head or Rhu Rhea.

December.—Northern Commissioners, for a first-class light on Stour Head or Rhu Rhea as may be afterwards resolved on.

1854, August.—Trinity House, That light should be a general passing light on Rhu Rhea, if the trade will bear it, making Oronsa a local light, and with no need for Stour Head.

Board of Trade inquire as to placing this light so as to open up Loch Broom.

1857, June.—Elder Brethren select South Ear, Stour Head.

1860, January.—Northern Commissioners, as to character of Stour Head relatively to Butt of Lewis.

When character of Stour Head is under consideration, the Elder Brethren will give observations attentive consideration.

Sound of Islay.

December.—Northern Commissioners, for a first-class light at or near Port Askaig in the Sound of Islay, to light up that Sound fully, both as to north and south.

1854, August.—Trinity House, That light would be seen when vessel is fairly in the entrance or abreast of it to the northward, yet it would not guide a vessel to the entrance, and that its usefulness to vessels entering the Sound from the southward would be still more circumscribed, say to less than 4 degrees.

Elder Brethren, think light should be on Rhu Vaal, as useful in guiding vessels to entrance from the northward, and in leading to an anchorage in Sound, if wind were well to westward or southward. Regard southern entrance as almost too dangerous to be taken at night, and that single light would scarcely be sufficient.

November.—Northern Commissioners forward letter, &c. from Commander Bedford demurring to site, and suggesting comparison with Carrig More.

1855, June.—Board of Trade transmit letter from Commander Bedford.

July.—Views of Trinity House, as above, explained to Board of Trade.

1856, July.—Board of Trade transmit letter from Admiralty, with enclosure from Commander Bedford and others relative to change of site from Rhu Vaal.

Opinions expressed by Trinity House in July 1855 reiterated.

1857, February.—Trinity House and Board of Trade concur that light should be fixed.

July.—Trinity House determine that light should be white to N.E., and south as a *guide* for navigation of Sound of Islay, and visible to westward as a *warning* to keep off the dangers abreast of Colonsay and Oronsay, and coloured red only in direction of east coast of Colonsay and Oronsay, with a view of warning vessels approaching too near those islands when bound through the Sound of Islay.

Northern Commissioners of opinion that this white light to the westward will not be understood

as a warning light, and should be red, or masked altogether.

1858, October.—Board of Trade transmit correspondence with Northern Commissioners and copy of proposed notice to mariners, with request that we will insert sailing directions, and transmitting also paragraph suggested by Captain Sullivan, relative to opening passage between Islay and Oronsay.

Elder Brethren, having regard to dangers, and in absence of distinctive character, are not prepared to recommend that masters of vessels should, under any circumstances, take a course defined by compass bearings alone between Islay and Oronsay in the night season. Sailing directions prepared.

Northern Commissioners consider modification of sailing directions necessary, in consequence of light being seen over low part of Oronsay.

Modification made.

Subsequently to this the Northern Commissioners have called attention to the inconvenience and liability to error from the red light showing over the low parts of Oronsay, and Commander Bedford represented danger to a vessel from misconception of character and intention of light.

Elder Brethren suggested fresh issue of sailing directions. Again inspected in summer of 1859, and determined that the red light, which used to show over the low part of Oronsay, should be masked.

Thurso Bay, Holburn Head.

December.—Northern Commissioners, for a light of small size for Thurso Bay, to lead to the proper anchorage in Scabster Roads.

1854, August.—Trinity House, That light should be a local one, inside Holburn Head.

1857, January.—Northern Commissioners formal proposal.

February.—Sanctioned.

1858, April.—Northern Commissioners propose that character should be fixed, colour green.

Trinity House advert to previous opinion of Northern Commissioners, that flashing light would be more suitable, consider it should be a white flashing light.

North Uist, Muckle Flugga.

The question of a light either in the neighbourhood of North Uist or of Whalsey Skerries had been under consideration at a time when it was proposed to place only one light on the north of east of Shetland, but in

1854, March.—The Board of Trade forwarded letter from Admiralty, urging the erection of two, and the placing of temporary lights meanwhile.

In July the site was visited. Lambaces had been preferred by the Northern Commissioners, their engineer stating on one occasion that it was not practicable to erect and maintain a lighthouse on the Muckle Flugga, although Mr. A. Stevenson, his predecessor, appears to have reported on four several occasions in its favour, as the site most proper for the general purposes of navigation, and deserving of the first consideration.

The Commissioners had also considered that a light on Muckle Flugga would also have the effect of drawing vessels injuriously to the southward, but the Elder Brethren observed that the wind during a large proportion of the year prevails from the westward; that under such circumstances ships would do well to keep to the windward, and that the light on Flugga would enable them to do so; that there were no engineering difficulties greater to contend with than those which have been already overcome by the improved skill of the present day, and that Flugga being the great landfall for vessels from the north, the north-west, and the north-east, and being the northernmost danger (with the exception of the stack lying a short distance off), should be taken as the most important and prominent site for a light.

1854.

Start Point.

March.—Northern Commissioners, to alter character of light from revolving to fixed bright when intended revolving light at North Ronaldshay is in operation.

April.—Concur.

1857.

Sound of Islay, Southern End.

January.—Northern Commissioners transmit copy of communication made to Board of Trade relative to light at south end of Islay, and to lighting Sound of Jura.

Trinity House. Think that single light will not be available for both Sounds, and would sanction light on Black Rocks for Islay.

Islay visited in course of summer, and Black Rocks found so difficult that McArthur's Head was preferred.

1859, March.—Northern Commissioners propose as character for McArthur's Head a revolving 2nd order.

Elder Brethren prefer fixed 2nd order.

Northern Commissioners reply.

Elder Brethren will postpone decision until visit.

September.—Elder Brethren suggest application of principle in use at Oronsay.

1860, January.—Northern Commissioners send plan.

Elder Brethren approve it.

Sound of Jura.

1857, February.—Northern Commissioners, recommending Rhuadsgier and Goat Island for sites.

May.—Northern Commissioners request sanction.

June.—Elder Brethren consider Skervoile preferable to Goat Island, and that Rhuadsgier is less urgently required.

1859, March.—Northern Commissioners propose fixed 3rd order for Skervoile.

July.—Elder Brethren concur, but light to show red southward of rock. (Sent in April, but miscarried.)

Phladda or Bladda.

May.—Northern Commissioners for sanction.

June.—Elder Brethren concur.

1859, January.—Northern Commissioners as to character.

February.—Elder Brethren, that Board of Trade suggest arc of red light.

Northern Commissioners think additional arc, if at all, should be green.

March.—Elder Brethren concur with Board of Trade.

Caledonian Canal.

February.—Board of Trade suggest light.

Sent to Northern Commissioners.

Corran.

May.—Northern Commissioners recommend Corran Point.

Sanctioned.

1859, January.—Northern Commissioners request sanction to character.

February.—Informed that Board of Trade suggest extension of bright light to northward.

Northern Commissioners adhere to original view.

March.—Trinity House concur with Northern Commissioners.

Butt of Lewis.

February.—Board of Trade, with correspondence with Northern Commissioners.

Elder Brethren, having regard to works in progress, postpone consideration for the present. Subsequently sanctioned.

May.—Northern Commissioners for sanction.

1860, January.—Elder Brethren, that character should be fixed bright.

Northern Commissioners, that it should be revolving.

February.—Elder Brethren see no reason to alter.

1858.

Ushenish.

January.—Northern Commissioners propose extension of arc upon that originally arranged to full extent of lie of shore, both north and south.

Elder Brethren approve range extending to $\frac{1}{2}$ miles of outlying danger on south coast; would not have concurred as to red colour, if character had been originally submitted, agreeably with requirement of 17 and 18 Vict. c. 104.

Frith of Forth.

February.—Board of Trade request opinion as to proposal of Northern Commissioners for lights on St. Abb's Head and Fifeness.

Elder Brethren consider light on St. Abb's Head desirable; as regards Fifeness, are not prepared to notify approval.

Northern Commissioners forward application from General Steam Navigation Company for light on St. Abb's Head.

May.—Trinity House, Sanction light on St. Abb's Head after visit to site.

1859.

Hebrides.

February.—Board of Trade forward correspondence with Northern Commissioners.

Elder Brethren visit sites, select westernmost of Monach Group.

October.—Northern Commissioners decline to express opinion on site selected.

Elder Brethren suggest that Monach should be quick revolving, Barra Head changed to a fixed bright light, and Butt of Lewis fixed bright.

November.—Board of Trade with correspondence. Northern Commissioners have resolved to build on westernmost of Monach Group.

1860, January.—Elder Brethren sanction Monach, both as to site and character; deem it unadvisable to alter Barra Head at present.

STATIONS IN IRELAND.

1846.

Cable Island.

January.—W. C. Morgan, forwarding two memorials from Cork for lighthouse thereon. Referred to Irish Board.

Irish Board, that inspector considers that Cable Island would not be the best situation, but that if Elder Brethren continue to prefer it will proceed.

Acquainted that Elder Brethren do so.

March.—Irish Board concur on full consideration, and request sanction.

April.—Accorded.

1847, April.—Board of Trade, that Captain Denham considers Ballycotton the most eligible site.

Acquainted that Cable Island is considered preferable.

November.—Admiralty, forwarding approval of site (Cable Island) from Admiral Beaufort, Commanders Wolfe and Fraser, and the Ballast Board of Cork. See 1848, *Ballycotton and Minehead.*

Cape Clear and Old Head of Kinsale.

February.—Irish Board advert to observations of Elder Brethren in 1844, propose to alter sites.

Elder Brethren entirely approve.

Dingle Harbour.

September.—John Hickson, Esq., recommending light thereat.

Referred to Irish Board.

Dundalk Harbour.

October.—Irish Board, requesting sanction to two small lights.

November.—Granted, if expenses are defrayed from local revenues.

1847, February.—Irish Board, further as to sanction.

Sanction confirmed, toll being only chargeable on local trade of port.

1847.

Beeres Rock.

February.—Irish Board, requesting sanction to light.

Accorded.

Rathlin Island.

March.—Irish Board, requesting sanction to light.

Trinity House, Advert to previous discussion with reference to relative importance of light on Rathlin Island, and those on Mull of Cantyre, &c.

1852, July.—Trinity House inquire as to character, on account of Devaar.

August.—Irish Board propose that it should be intermittent.

Elder Brethren concur, but suggest a fixed light below, in the same tower.

XIV.

LIGHTHOUSES.—GENERAL RETURN.

XIV.

ENGLAND.

Circular II.
Question
XIV.

September.—Irish Board transmit report from Engineer.

Trinity House adhere to original opinion.

Glascarrick Point.

April.—Editor of "Liverpool Mercury," calling attention to "Brief Notes" therein, proposing a light.

Sent to Irish Board.

June.—Irish Board reply, suggesting two buoys on outer edge of Blackwater Bank.

Elder Brethren concur and sanction.

Fastnett Rock.

December.—Irish Board propose to place light thereon, in lieu of south-west Point of Capc Clear.

Elder Brethren inquire for further particulars.

1848, January.—Elder Brethren send sanction.

1848.

Tralee Bay.

January.—Irish Board, requesting sanction to light on Saphire Island.

Elder Brethren will sanction if harbour light or lights.

March.—Harbour light sanctioned.

Ballycotton, Minehead.

March.—Irish Board forward letter from Admiralty, that two lights are necessary between Hook Tower and Old Head of Kinsale, and memorials in favour thereof.

Elder Brethren consider that one light only would be best placed on Cable Island, but that now two lights are proposed, Ballycotton and Minehead are the best situations; sanction granted accordingly.

1850, April.—Irish Board as to character, propose that Ballycotton should be flashing, Minehead intermittent.

May.—Elder Brethren concur if distinction be accurately marked; inquire further.

June.—Irish Board explain details.

Elder Brethren approve.

April.—Shipowners, &c., Liverpool, T. C. Anstey, M.P.

Acquainted with the arrangement which had been sanctioned above.

Youghal Harbour.

March.—Irish Board, requesting sanction to light. Harbour light sanctioned.

Lights on South Coast.

April.—Trinity House sends memorials from Liverpool and Youghal.

May.—Irish Board thereon.

Trinity House inquire further.

Broadhaven Harbour.

July.—Irish Board, requesting sanction to light.

August.—Trinity House inquire further.

1850.

Galley Head.

Jan.—Irish Board, requesting sanction to light.

Not considered by Trinity House that an additional coast light is necessary; would not object if expense be local.

April.—Lord Bernard, forwarding recommendation from Grand Jury of Cork County for light.

Above opinion forwarded.

July.—Lord Bernard, forwarding recommendation from Grand Jury of Cork County for light.

Above opinion forwarded.

1857, March.—Irish Board renew application.

Trinity House reply as before.

Galway Bay.

January.—Irish Board propose light on Inishere Island and on Rock Island, and to discontinue that on Arran Island.

Suggested by Trinity House whether it would not be desirable to defer proposed erection on Rock Island, and confine operations to light on Inishere Island, and retain Arran Light; but if Irish Board consider both lights should be proceeded with, sanction will not be withheld.

February.—Irish Board concur in suggestion.

1853.

Rock-a-Bill.

October.—Irish Board advert to previous correspondence in 1838, request sanction to light.

November.—Accorded, provided tolls for Balbriggan Light become local.

In March 1859, the character of the Rock-a-Bill Lighthouse came under consideration, and it was determined that it should be quick, flashing, bright to seaward, red to westward between Cloger Head and Bailey Head, and consequent thereon that the fore and mizen lanterns of the Kish should be lowered; no alteration in Carlingford or in Howth Bailey, but St. John's Point to be changed from bright to red, to render it more distinct from South Rock.

A letter was received from the Board of Trade, suggesting that the Kish should be made a single revolving light instead of lowering the lanterns; and that the period of revolution at St. John's should be altered instead of making it a red light. A copy of this letter was sent to the Irish Board, with an intimation that the Elder Brethren see no reason to alter their expressed views.

1854.

Straw Island.

November.—Board of Trade inquire as to utility of proposed small harbour light.

Trinity House.—That it would facilitate entrance to Killcany Bay and Gregory's Sound, and would be advantageous to fisheries; is to be regarded as alone for the purposes of the locality.

1857.

South-west Coast.

March.—Irish Board propose to erect lights on Galley Head, Bull and Foze, and Black Rock.

April.—Trinity House.—Will sanction Bull and Foze, if in substitution for Skelligs and Black Rock or Achill Island.

June.—Sanction "Bull" if Skelligs be discontinued; "Calf," if they remain; sanction Foze; sanction Black Rock, Achill Head being too far to the eastward.

Hook Tower, Waterford.

July.—Irish Board propose to paint top red.

Concur.

1859.

Spit Bank, Cork Harbour.

March.—Irish Board propose increase of power, &c.

Concur as to power; character should not be further altered by addition of flashes, as had been suggested.

Crookhaven.

March.—Irish Board propose to colour arc over Alderman Rock red.

Concur.

Mutton Island, Galway.

May.—Irish Board to show a lower light coloured red, to indicate channel between Black Rock and Margaretta Bank.

Concur; afterwards advise that Board of Trade cannot allow charge on Mercantile Marine Fund.

Light on Cahore Point. See Blackwater Bank Lightvessel.

Arranmore.

July.—Irish Board request sanction to re-lighting.

Elder Brethren inquire as to character.

October.—Irish Board propose single flashing, and that Rathline O'Erne be changed from flashing to single fixed.

November.—Elder Brethren concur.

Spit of Passage, Waterford.

December.—Irish Board, requesting sanction to light.

Elder Brethren do not consider it of such general advantage as to justify their forwarding proposal for sanction of Board of Trade.

Copeland Island Light, &c.

December.—Irish Board propose removal.

Elder Brethren cannot pronounce opinion until after visit.

STATIONS IN THE CHANNEL ISLANDS.

1846.

Guernsey.

January.—Mr. Sadler, recommending light thereat.

February.—Acquainted that proceedings will be taken in relation thereto on receiving requisition from trade.

XIV.

LIGHTHOUSES.—GENERAL RETURN.

[XIV.

ENGLAND.
Circular II.
Question
XIV.
XV.
XVI.
XVII.

March.—Chamber of Commerce, stating that no light is required.

Mr. Sadler, further recommending light.

Both acquainted that Corporation decline taking further steps therein.

Mr. Sadler, forwarding copy of letter he has addressed to Chamber of Commerce.

Acknowledged.

Mutual Insurance Society, contradicting statements made by Mr. Sadler.

Acknowledged.

June.—Mr. Sadler, with opinion of Rev. D. Dobree, Rector of Tortoval, as to advantage of light.

Trinity House reply that when application for light is made by shipping interest, consideration of subject will be resumed.

1847, May.—Mr. Sadler, with memorial from certain shipowners, praying establishment of light. Governor of Island communicated with hereon.

September.—Mr. Sadler, further recommending light.

Acquainted Committee had visited Island, and find opposition to light continues.

1848, February.—Mr. Sadler, calling attention to wreck of the "Emanuel."

March.—Mr. Sadler, calling attention to wreck of the "Five Sisters."

Copies forwarded to parties who object to light. Mutual Insurance Society, that light would be of service to coasting trade.

April.—Chamber of Commerce, still objecting to light.

Mr. W. Wilson, referring to loss of the "Nabob."

Lloyd's requested to furnish particulars in relation to this wreck.

May.—Lloyd's furnish particulars.

Attention of Lieut.-Governor directed to these representations, and inquiry made whether there would be any objection to a moderate charge for the expenses of a light.

June.—Lieut.-Governor, transmitting resolution of Chamber of Commerce objecting to light.

Mr. Sadler, advocating exhibition of light.

Rev. D. Dobree, suggesting that Tortoval Church steeple be appropriated for light.

July.—Lieut.-Governor, transmitting resolution of Chamber of Commerce expressing conditional approval.

Opinion of counsel to be obtained in relation to powers of Corporation to erect lights on Channel Islands.

October.—Lieut.-Governor, transmitting papers from Mr. Sadler and others in favour of light.

November.—Mr. Sadler, forwarding copy of memorial to Corporation sent in 1846, in relation to security vessels would derive from light.

Counsel (Mr. Robinson) of opinion that Corporation have no power at present to erect light-houses on the Channel Islands.

Counsel's opinion to be forwarded to Mr. Sadler.

Mr. Sadler, urging that measures may be taken by those who have authority for exhibition of light.

Lords of H.M. Treasury to be addressed on the subject.

1849, January, Mr. C. Crespinal, representing want of light.

Acquainted with the powers of the Corporation.

February.—Treasury have forwarded communication to Sir George Grey, with a request that he will address Lieut.-Governor thereon.

April.—Treasury are prepared to receive suggestions in relation to light.

Informed that Elder Brethren concur in opinion that light is necessary, but that Corporation have no power at present to erect it. Referred to erection of lights at Gibraltar and Heligoland.

October.—Board of Trade, forwarding copy of letter addressed by Mr. Sadler to Mr. Labouchere, consider arrangements more properly rest with Treasury.

Copy to be forwarded to the Treasury, and inquiry made whether their Lordships contemplate the adoption of any measures for the erection of light.

December.—Lieut.-Governor inquires whether collection of tolls in Guernsey for light thereat would be likely to lead to liability for lights which may hereafter be erected on the British side of the channel.

Acquainted that Board has no intention or wish that it should do so.

December.—Lieut.-Governor, suggesting an arrangement for providing and maintaining light.

Forwarded to the Lords of the Treasury.

1857, March.—Board of Trade, forwarding memorial from Chamber of Commerce for light.

Elder Brethren continue to entertain opinion that light would be useful on south-west part of island.

June.—Board of Trade, that they are still in communication with authorities of the island thereon.

Board of Trade, that Mr. A. Gordon recommends an iron lighthouse.

Trinity House consider light should be built of granite.

1858, June.—Messrs. Harvey, Hayle, offering to moor and maintain a lightvessel on Herbert's plan for reasonable period, and if found not to answer, to build an iron lighthouse for 15,500*l*.

Acquainted that there is no intention of placing a lightvessel thereat.

1859, July.—It was resolved to build a light-house, which is now in course of erection on Le Biseau, one of the Hanois group.

1856.

Jersey.

August.—C. Crespinal, Esq., recommending light on the Corbierre.

Forwarded to authorities at Jersey for observations.

December.—Admiralty, requesting opinion in relation to proposed light on Vercluit Pier.

No objection to offer thereto.

1858, April.—Board of Trade, forwarding letter from master of "Prince of Wales," and C. Crespinal, Esq., recommending light on the Corbierre.

Referred to Visiting Committee.

1858.

Alderney, Harbour of Refuge.

December.—Admiralty, whether there is any objection to two lights thereat.

Acquainted that there is no objection.

XV. Total income for lighthouses, floating lights, buoys and beacons, and total expenditure on maintenance of lighthouses, in each year since 1st January 1845:—

	Total Income.	Expenditure for Lighthouses.
1845	£319,325 19 9½	£34,019 17 4
1846	305,363 12 9	27,244 10 4
1847	333,142 5 5	32,922 9 8
1848	341,014 1 4	32,534 3 11
1849	323,429 9 8½	23,412 9 5
1850	271,507 19 8½	24,721 14 2
1851	290,986 13 11	25,384 12 1
1852	286,961 18 8	29,260 6 3
1853	292,856 10 5	27,963 7 11
1854	236,172 19 6	21,022 12 7
1855	253,497 3 5	26,796 7 2
1856	304,648 11 9	33,693 8 11
1857	267,624 10 0	34,148 9 3
1858	255,122 13 3	25,115 3 3

Income.

For the years preceding 1855 the amounts stated are the total of light duties collected for English lights; subsequent years show the totals collected at English Ports.

XVI. Considered by Board; referred by them to Mr. Faraday; tried at the Trinity House or in the experimental lantern at Blackwall; and, if preliminary investigations warrant it, finally at a lighthouse.

XVII. Dates of all applications to Board of Trade for power to construct or reconstruct or alter light-houses since 1st October 1853, with date of final approval, and in case of non-compliance, the reason given for any deviation from the application:—

1854.

Orford.

January 30th.—Requesting sanction for expenditure necessary for repairing damage caused by high tide and providing for future security of buildings.

February 1st.—Board of Trade final approval.

Needles.

June 24th.—Requesting sanction for expenditure required for erection of light on outer Needles rock in lieu of light on present elevated position.

XVII.

LIGHTHOUSES.—GENERAL RETURN.

XVII.

ENGLAND.
Circular II.
Question
XVII.

January 16th, 1855.—Board of Trade final approval.

Smalls.

June 24th.—Requesting sanction for expenditure necessary for erection of new lighthouse of stone instead of present structure on wooden piles.

January 16th, 1855.—Board of Trade final approval.

Whitby.

June 24th.—Requesting sanction for expenditure necessary for erection of a new lighthouse on the cliff east of Whitby.

July 20th.—Board of Trade sanctioned.

November 17th.—Trinity House.—Recommending that two lights should be exhibited.

23rd December.—Board of Trade approve.

1856, February 28th.—Trinity House.—Requesting sanction for expenditure necessary for exhibition of light on Whitby Pier as a general light until coast lights are completed.

March.—Board of Trade.—Sanction declined, their Lordships being of opinion there does not exist urgent necessity.

1858, October.—Trinity House.—Requesting sanction to expenditure for purchase of extra sprig of water.

November.—Board of Trade.—Approve purchase if supply be adequate; suggest lease with right of purchase.

1855.

St. Ives Bay.

January 23rd.—Trinity House.—Preliminary proposal for expenditure necessary for erection of lighthouse therein.

February.—Board of Trade. Will give full consideration on receipt of particulars.

July 13th.—Elder Brethren have adopted recommendation of Committee that light should be on Godrevy, the cost of erection on the Stones being assumed to be too great.

September 12th.—Board of Trade find that Admiralty have been surveying; will be glad of estimate for light on northern Stone.

September 19th.—Trinity House. Advert to Committee's report in which the Stones was considered most eligible site, and that it was question of expense alone which prevented its recommendation. Mr. Walker's estimate, 40,000*l.* to 45,000*l.* sent.

October.—Board of Trade. Request estimate of difference of cost between inner and outer Stone.

Trinity House. Difference (2,000*l.* to 3,000*l.*) found to be too inconsiderable to recommend adoption.

Board of Trade negotiate with War Office for site on St. Ives Head.

1856, September 13th.—Trinity House. Requesting sanction for expenditure necessary for erection of lighthouse on that site, which all parties agree in considering the best, viz., the Stones.

November 25th.—Board of Trade. "Stones" admitted to be most eligible site, but cost too great, having regard to the trade to be benefited to justify charge on Mercantile Marine Fund; their Lordships therefore sanction Godrevy.

1858, March 5th.—Trinity House. Requesting sanction for expense of lightvessel during erection of lighthouse.

March 13th.—Sanctioned.

November 6th.—Trinity House. Requesting sanction for expense of fog bell.

November 12th.—Sanctioned.

South Foreland.

April 10th.—Trinity House. Requesting sanction to expenditure for erecting lightkeepers' dwellings.

April 17th.—Sanctioned.

Portland.

August 9th.—Trinity House. Requesting sanction to expenditure for adaptation of old tower to new light and for lightkeepers' dwellings.

October 16th.—Board of Trade. Sanction as regards adaptation of tower; request modification of plans to reduce outlay for dwellings.

1856, July 12th.—Reduced estimate sanctioned.

Longships.

August 18th.—Requesting sanction to expenditure for erection of lightkeepers' dwellings and boat and storeroom at Sennen Cove.

November 7th.—Board of Trade sanction.

Maplin.

August 15th.—Requesting sanction to expenditure for certain works necessary for security of structure.

September 3rd.—Board of Trade sanction.

Fern.

September 10th.—Requesting sanction to expenditure for increasing power of light on Longstone.

September 15th.—Board of Trade sanction.

Pakefield.

September 10th.—Requesting sanction to expenditure for additional lamp thereat.

September 15th.—Board of Trade sanction.

1856.

Bideford.

February 18th.—Requesting sanction to expenditure for repairing sea defences.

February 21st.—Board of Trade sanction.

Harwich.

February 19th.—Requesting sanction to rent a cottage for lightkeeper of Langard Fort light, and to put the same in repair.

February 28th.—Board of Trade sanction.

1858, July 19th.—Requesting sanction to erect structure to serve the double purpose of dwelling for keeper and place from which to exhibit light instead of at Langard Fort.

Board of Trade. Request further particulars. 1859, May 13th.—Trinity House. Requesting sanction for expenditure for new lighthouses on the Cliff at Dovercourt and on Langard Point.

June 15th.—Board of Trade sanction.

September 21st.—Requesting sanction to expenditure for temporary dwellings for lightkeepers at Langard.

September 27th.—Board of Trade sanction.

Air.

March 6th.—Requesting sanction to expenditure for repair of structure.

March 13th.—Board of Trade sanction.

Lundy.

March 10th.—Requesting sanction to expenditure for new lighting apparatus.

May 19th.—Board of Trade sanction.

1857, May 7th.—Requesting sanction to expenditure for repair of road rendered impassable by landslip.

May 13th.—Board of Trade sanction.

Bardsey.

March 29th.—Requesting sanction to expend ture necessary for improving light thereat.

April 3rd.—Board of Trade sanction.

Haisbro'.

March 29th.—Requesting sanction to expenditure necessary for improving light thereat.

March 31st.—Board of Trade sanction.

Caskets.

April 10th.—Requesting sanction necessary for expenditure for erecting keepers' dwellings.

April 18th.—Board of Trade sanction.

Spurn.

May 14th.—Requesting sanction necessary for expenditure for repairing Low Lighthouse, and for continuing piling round the high tower.

May 19th.—Board of Trade sanction.

1859, September 1st.—Requesting sanction necessary for expenditure for sea defences.

North Foreland.

July 2nd.—Requesting sanction for expenditure for erecting keepers' dwellings.

July 21st.—Board of Trade sanction.

1858, May 5th.—Requesting sanction for expenditure for improving light by substituting dioptric apparatus, and making lantern applicable.

May 12th.—Board of Trade sanction.

June 28th.—Requesting sanction for expenditure for iron girders in lieu of decayed timbers to support lantern.

ENGLAND.
Circular II.
Question
XVII.
XVIII.
XIX.

XVII.

July 6th.—Board of Trade sanction.
1859, February 1st.—Requesting sanction for expenditure for stone stairs and making building fireproof.
Board of Trade inquire as to cheaper method, Trinity House send reasons for proposed plan. Board of Trade sanction, but require tenders to be obtained from not less than six builders, and forwarded to them.
June 23rd.—Final sanction.
November 29th.—Requesting sanction for expenditure for coating tower with cement.
December 3rd.—Board of Trade sanction.

Gunfleet.

October 21st.—Requesting sanction for expense of fog bell and apparatus.
October 31st.—Board of Trade think such works should be put out to contract.
Trinity House explain that arrangement for striking has been devised by Mr. Wilkins, and that it was not thought fair to lay it open to inspection and competition.

1857.

South Stack.

June 11th.—Requesting sanction for expense of erecting lightkeeper's dwelling.
July 4th.—Board of Trade sanction, but think amount very high; request that in future no orders may be given for preparation of plans without their knowledge.

Heligoland.

December.—Requesting sanction for expenditure necessary for increasing dwelling accommodation for keepers.
December.—Board of Trade sanction.

1858.

Dunqeness.

December.—Requesting sanction for expenditure for fog bell.
1859, January.—Board of Trade sanction.
1859, July.—Requesting sanction for expenditure for new lantern and lighting apparatus.

1859.

Burnham.

August.—Requesting sanction for expenditure for improving lightkeepers' dwellings.
August.—Board of Trade sanction.

1860.

Wolf Rock.

April.—Requesting sanction for expenditure for erecting lighthouse thereon.
Board of Trade inquire whether lightvessel would not answer every purpose.
Trinity House explain why not.
Board of Trade request further information.
May.—Trinity House reply.
June.—Board of Trade concur in expenditure necessary for lighthouse; suggest that work should not be commenced until after completion of the Hanois light, when the tug and staff employed thereon would be available.

Nash.

May.—Requesting sanction for expenditure for upholding cliff thereat.
Board of Trade sanction portion of proposed outlay; consider rest of work far from urgent, &c.
June.—Trinity House forward Mr. Walker's observations; state that two new cracks have appeared, and that Board are confirmed in opinion, that the most economical course will be to carry out entire work at once.

XVIII. The papers required were furnished.
XIX. Answers to Questions of a general character in the Special Returns. (See Circular III, for the Questions to which the following are Answers.)
I. The Corporation of Trinity House of Deptford Strand, Trinity House, London, E.C.
V. As a general rule, whenever it appeared desirable to the Elder Brethren to exhibit a new light, it was the practice of the Corporation (previous to October 1853) to ascertain the views of parties likely to be affected thereby, who then signified their willingness to pay the toll requisite for its

LIGHTHOUSES.—GENERAL RETURN.

XIX.

STATEMENT showing the Taxes paid on account of each Lighthouse in 1852, and the Expense for Repairs in 1852 and 1858.

maintenance by memorializing the Board to establish a light in the locality.

XX. From sunseting to sunrise (except at Bideford, for which see Special Return).

XXXIII. The lighthouses and adjoining buildings are repaired according to requirements, by local tradesmen; whenever it is practicable their work is performed under contract; no lighthouse is kept in repair by annual or periodical contract.

XXXIV. The lighthouses and adjoining premises are painted either by the Corporation's foreman painter with the assistance of hired journeymen, or by a local tradesman for an agreed sum. In either case the paints and oil are supplied from the Corporation's stores.

XXXIX. Pure refined rapeseed oil, price per imperial gallon, estimated at nine pounds weight per gallon, in 1857, four shillings (4s.); in 1858, three shillings and threepence (3s. 3d.).

XLII. From revenues derivable from dues for lights, buoys, and beacons, paid into the Paymaster-General's Office to the account of the Mercantile Marine Fund.

XLIV. The amount stated for 1852 differs from that shown in the Parliamentary Return for that year, as the latter included the cost of collection (now defrayed by the Custom House), taxes (no longer leviable), charges for repairs, and a proportion of the expense of the steam or sailing tender by which each light was served. The whole sum stated to be expended on the lighthouse in each year is made up of items for agency, wages, provisions, rents, and insurance, coals, oil, and stores, boat hire, medical expenses, incidentals and stationery; expenses for repairs are not included, because their exceptional amounts would prevent any comparison between the expenditure of the two years. A statement of the taxes in 1852, and of the repairs in each year, is subjoined. (See table at top of column.)

XLV. XLVI, XLVII. Attached. (See page 52, ante.)

LV. The only tidal light under the immediate jurisdiction of the Corporation is that of Bideford, for which see Special Return.

LVI. The signal code for the Corporation's use by day is submitted. The lighthouses generally have no occasion for night signals, but the Fern Station is supplied with rockets.

CIRCULAR No. III.—LIGHTHOUSES.—SPECIAL RETURN.

THE CORPORATION OF TRINITY HOUSE, LONDON.

The Lights are numbered to correspond with the Index Map.

1.

FERN INNER HIGH.

Near the S.W. Point of the Island.

3. Samuel M. King, North Sunderland, near Chathill, Northumberland.
4. Two, bearing N. by W. $\frac{1}{2}$ N., S. by E. $\frac{1}{2}$ E., 187 yards. The Longstone forms part of the Fern group, for which see Special Return.
5. 1st December 1673. Patent granted to Sir John Clayton and George Blake to erect lighthouses on Fern Islands. March 1775, renewed. See General Return, 19.
6. Capt. John Blackett, and the trade of Newcastle, Sunderland, Whitby, and the north country coasting or fishing trade.
7. The best position with regard to the Megstone and adjacent dangers.
8. 1776, as a coal fire; rebuilt 1809-10. 20th January 1811, as an oil light.
9. Builder, Joseph Nelson. Engineer, Daniel Alexander. Not by contract.
10. Sea light.
11. Stone; solid wall; at base 2 feet 6 inches, at top 2 feet; coated with cement; white; circular; lantern gallery with iron railings.
12. Dr. Faraday's.
13. 43 feet.
14. 87 feet.
15. 10 miles.
16. 15 miles.
17. 360°. The whole circle.
18. Revolving; bright.
19. Perfect revolution in 31 minutes, showing the full face of a reflector every half minute.
20. See Lighthouses, General Return, 19.
21. Catoptric. Argand lamps, burners $\frac{1}{2}$ of an inch in diameter and parabolic reflectors 21 inches diameter, 9 inches deep Clockwork revolving machine.
22. Seven burners.
23. No alteration.
24. Reflectors, frame, &c., Geo. Robinson, London. Lamps, &c., R. Wilkins and Son, London.
25. Faraday's tubes, 1 $\frac{1}{2}$ in. diameter over the flames of the lamps, and ventilators in the lantern pedestal.
26. None.
27. None.
28. 28 days.
29. 1810: two lighthouses, 5,21*l.* 5*s.* 10*d.* 1842: three dwellings, 2,40*l.* 3*s.* 11*d.* 1846: site, 193*l.* 10*s.* 7*d.*
30. Completed.
31. Diameter, 9 feet. Height: pedestal, 3 feet 6 inches; glass, 5 feet; glass to vane, 12 feet; total, 20 feet 6 inches. Two lanterns, one for high and one for low light, including apparatus and fitting, 3,92*l.* 8*s.* 10*d.*
32. Three lighthouses, 86,445*l.* 13*s.* 2*d.*; December 1824, redemption of the lease.
33. 40*l.* 8*s.* 9*d.* since construction, including low light and Longstone.
34. 80*l.* 6*s.* 1*d.*; by foremen painters; about once in four years.
35. Three for the two inner Fern lights; one, 65*l.*, one, 46*l.* 10*s.*, and one, 45*l.*, a suit of clothes annually, coal, oil, and furniture for dwellings.
36. Included in price of lantern.
37. 1857, 6*l.* 15*s.* 6*d.*, including low light; 1858, 5*l.* 15*s.* 3*d.*, ditto.
38. For the two lights—1857, oil, 812 gallons; wicks, 34 dozen. 1858, 309 gallons; 36 dozen.
39. See Lighthouses, General Return, 19.
40. Argand cotton, 2*s.* 6*d.* per gross. 1857, 7*s.* 1*d.*; 1858, 7*s.* 6*d.*
41. Nil.
42. See Lighthouses, General Return, 19.
43. For the three lights—1852, 448*l.* 13*s.* 7*d.*; 1858, 284*l.* 3*s.* 5*d.* Total for 1852, 1,340*l.* 4*s.* 8*d.*
44. 1852, 504*l.* 13*s.* 9*d.*; 1858, 590*l.* 8*s.* 4*d.*, including low and outer light (Longstone); and see Lighthouses, General Return, 19.
- 45, 46, 47. Nil. See Lighthouses, General Return, 19.
48. Nil.
49. Nil.
50. Committees of the Elder Brethren and Agent.
51. Committees: 1857, 23rd May, 17th August. 1858, 17th May, 1st October (weather prevented a landing), 2nd October. Agent: 1857, 1st, 24th, 27th June; 2nd July; 1st, 5th, 22nd August; 1st, 23rd September; 2nd November. 1858, 1st, 10th, 24th June; 1st, 5th, 10th July; 2nd August; 1st September; 2nd, 4th, 12, 21st October; 1st, 29th November; 3rd, 24th December.
52. No.
53. Three lamps, with burners complete; in the basement of tower. Diameter of oil cellar, 12 feet; height of oil cellar, 8 feet.
54. Internal thermometer.
55. See Lighthouses, General Return, 19.
56. Signal for life-boat, black ball on the flagstaff in the day-time; rockets at intervals of ten minutes at night. For code, see Lighthouses, General Return, 19.
57. Not relieved.

2.

FERN INNER LOW.

Near the N.W. Point of the Island.

3. Samuel M. King, North Sunderland, near Chathill, Northumberland.
4. Two, bearing N. by W. $\frac{1}{2}$ W. and S. by E. $\frac{1}{2}$ E.; 187 yards.
5. 1810. See General Return, 19.
6. Trade of Berwick, Alcmouth, and northern ports.
7. The site best adapted for a low light to serve as a leading mark, in one with the high light, to guide ships through the channel between the two shoals called the *Goldstone* and the *Plough*.
8. 1st February 1811.
9. Builder, Joseph Nelson. Engineer, Danl. Alexander. Not by contract.
10. Sea light.
11. Rough stone; solid wall; at base 1 foot 6 inches, at top 1 foot; not coated; white; octagonal; lantern gallery with iron railings.
12. Dr. Faraday's.
13. 27 feet.
14. 45 feet.
15. 7 $\frac{1}{2}$ miles.
16. 12 miles.
17. 15° north; N. 15 W.
18. Fixed; bright.
19. Not revolving.
20. See Lighthouses, General Return, 19.
21. Catoptric. Argand lamp, burner $\frac{3}{4}$ of an inch, and parabolic reflector 21 inches diameter, 9 inches deep.
22. One burner.
23. No alteration.
24. R. Wilkins and Son, London.
25. Faraday's tube, 1 $\frac{1}{2}$ inch diameter over the flame of the lamp.
26. None.
27. None.
28. 28 days.
29. Included in Fern inner high light.
30. Completed.
31. Diameter, 6 feet 6 inches. Height: pedestal, 3 feet 4 inches; glass, 4 feet; glass to vane, 7 feet 10 inches; total, 15 feet 2 inches. Price included in that of the high light.
32. Three lighthouses, 36,445*l.* 13*s.* 2*d.*; December 1824, redemption of the lease.
33. As No. 29.
34. As No. 29.
35. Three for the two inner Fern lights. One, 65*l.*, one, 46*l.* 10*s.*, and one, 45*l.* per annum, a suit of clothes annually, and coal, oil, and furniture for dwellings.
36. As No. 29.
37. Ditto.
38. Included in consumption of high light.
39. See Lighthouses, General Return, 19.
40. Argand cotton, 2*s.* 6*d.* per gross; cost included with high light.
41. Nil.
42. See Lighthouses, General Return, 19.
43. See Return for Fern Inner High Light.
44. Ditto ditto and see Lighthouses, General Return, 19.
- 45, 46, 47. Nil. See Lighthouses, General Return, 19.
48. February 1857. Receiver of wreck at Berwick to Board of Trade, who transmit it, "that the leading light should be moved from the Big Fern to the *Megstone*." Decline to adopt recommendation; disapprove of giving further encouragement to vessels using the inner channel at night time or in thick weather.
49. Nil.
50. Committees of Elder Brethren and Agent.
51. Committees: 1857, 23rd May, 17th August. 1858, 17th May, 1st October, 2nd October, (weather prevented a landing). Agent: 1857, 1st, 24th, 27th June; 2nd July; 1st, 5th, 22nd August; 1st, 23rd September; 2nd November. 1858, 1st, 10th, 24th June; 1st, 5th, 10th July; 2nd August; 1st September; 2nd, 4th, 12th, 21st October; 1st, 29th November; 3rd, 24th December.
52. No.
53. One lamp, with burner complete; in oil cellar at high lighthouse. Diameter of oil cellar, 12 feet; height of oil cellar, 8 feet.
54. None.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Not relieved.

CORPORATION OF TRINITY HOUSE, LONDON.

3.

FERN OUTER.

Longstone Rock, one of the Outer Staple Islands.

3. Samuel M. King, North Sunderland, near Chathill, Northumberland.
4. One only, but classed generally with the Inner Ferns.
5. March 1775. For its removal, March 1810. See General Return, 19.
6. 1775, Capt. J. Blackett and trade of the northern ports. 1810, Mr. Robert Gladstone and the old Shipping Company of Berwick-upon-Tweed.
7. On consideration of the position of the previous light on the Brownsman Island relatively with the outer danger called the Navestone, it was removed to its present site as being of greater utility to the general trade.
8. 15th February 1826 (from the Longstone.)
9. Builder and Engineer, Joseph Nelson. Contract for stone only.
10. Sea light.
11. Rough stone; solid wall; at base three feet, at top two feet; not coated; red; circular; lantern gallery with iron railings.
12. Dr. Faraday's.
13. 85 feet.
14. 75 feet.
15. 9½ miles.
16. 15 miles.
17. 96°. The whole circle.
18. Revolving; bright.
19. Perfect revolution in two minutes, showing a flash every 30 seconds.
20. See Lighthouses, General Return, 19.
21. Catoptric. Argand lamps, burners seven-eighths of an inch, and parabolic reflectors 21 inches diameter, nine inches deep. Clockwork revolving machine.
22. 12 burners.
23. No alteration.
24. William Wilkins, London.
25. Faraday's tubes, 1½ inch diameter over the flames of the lamps.
26. None.
27. None.
28. 21 days.
29. 1826, lighthouse and adjoining buildings, 4,771*l.* 14*s.* 7*d.* 1842, dwellings, 2,631*l.* 18*s.* 9*d.*
30. Completed.
31. Diameter, 12 feet. Height: pedestal, 4 feet; glass, 6 feet; glass to vane, 11 feet; total, 21 feet. Price 1,144*l.* 11*s.* 8*d.* (includes illuminating apparatus and cost of fitting.)
32. Redemption of lease, three lighthouses (the Outer Fern then on the Brownsman), 36,442*l.* 13*s.* 2*d.* December 1824.
33. Included in Fern Inner High Light.
34. Included in Fern Inner High Light. About once in four years.
35. Two; one at 80*l.*, one at 45*l.* per annum, a suit of clothes annually, and coal, oil, and furniture for dwellings.
36. Included in price of lantern. Revolving apparatus, 108*l.* 10*s.*
37. 1857, 4*l.* 8*s.* 6*d.* 1858, 4*l.* 0*s.* 7*d.*
38. 1857, oil, 395 gallons; wicks, 44 dozen. 1858, oil, 395 gallons; wicks, 40 dozen.
39. See Lighthouses, General Return, 19.
40. Argand cotton, 2*s.* 6*d.* per gross. 1857, 9*s.* 2*d.* 1858, 8*s.* 4*d.*
41. Nil.
42. See Lighthouses, General Return, 19.
43. See Return for Fern Inner High Light.
44. Ditto, ditto.
- 45, 46, 47. Nil. See Lighthouses, General Return, 19.
48. Nil.
49. Nil.
50. Committees of the Elder Brethren; agent in 1858.
51. Committees:—1857, May 23rd, August 17th; 1858, May 17th, October 1st, weather prevented a landing. Agent:—1858, 3rd, 24th March; 3rd, 27th April; 1st, 10th May; 1st, 10th, 24th June; 1st, 5th, 10th July; 2nd August; 1st September; 4th, 21st October; 1st, 29th November; 3rd, 24th December.
52. 18th March 1852, pane of glass broken by a wild duck; extinguished about 20 minutes.
53. 7 lamps with burners complete. In the basement of the tower. Diameter of oil cellar, 16 feet; height, 11 feet.
54. Barometer with thermometer attached. External and internal thermometers.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Not relieved.

4.

COQUET.

The South-west Part of the Island.

3. No agent. Principal keeper acts as local agent. Wm. Brooks Darling, Coquet Lighthouse, Amble, near Acklington, Northumberland.
4. One.
5. April 1826. See General Return, 19.
6. Lieut. Jones, R.N., and persons connected with the northern coasting trade (per the Duke of Northumberland).
7. To keep vessels coming from the southward outside the reef off Hauxley Point.
8. 1st October 1841.
9. Builder, Robert Dunn, Alnwick. Engineer, James Walker, Superintendent of Works, Alexandor Howe. By contract.
10. Sea light.
11. Sandstone; solid walls, 3 feet 9 inches; coated with cement; white; four-sided, with turreted parapet.
12. Dr. Faraday's.
13. 72 feet.
14. 83 feet.
15. 9½ miles.
16. 14 miles.
17. 180°. N. 18 E., S. 18 W.
18. Fixed; bright and red.
19. Not revolving.
20. See Lighthouses, General Return, 19.
21. Dioptric. Six refractors of 10 to the circle, with 19 zones of prisms, 13 above and six below the refractors. Fountain, four concentric wick lamp, with regulating condenser. Red shades on lens.
22. 1st order.
23. 19th December 1854, zones substituted for mirrors. January 1854, red shade fitted to strike Hauxley Point buoy at suggestion of inspecting committee. March 1854, red shade fitted to strike Boulmer Rocks. No alteration in character.
24. Refractors, Isaac Cookson and Co., Newcastle. Zones, Henry Lepaute, Paris. Frame, lamps, &c., R. Wilkins and Son, London.
25. Faraday's tube, 4½ inches diameter over the flame of the lamp, and by openings in lantern pedestal.
26. None.
27. None.
28. 12 days.
29. Lighthouse and dwellings, 3,268*l.* 5*s.* 2*d.* Buoy store adjoining, 671*l.* 14*s.* 4*d.*
30. Completed.
31. Diameter, 18 feet. Height: pedestal, 4 feet 7 inches; glass, 10 feet; glass to vane, 11 feet 9 inches; total, 26 feet 4 inches. Price, 665*l.* 8*s.* 5*d.* Cost of fitting included in that of fitting illuminating apparatus.
32. Not purchased.
33. 23*l.* 9*s.* 5*d.* since construction. Not by contract.
34. 24*l.* 17*s.* 1*d.* Foreman painters. About once in four years.
35. Three; one at 65*l.*, one at 46*l.* 10*s.*, one at 35*l.*, a suit of clothes annually to the two first, none to the other, and coal, oil, and furniture for the dwellings.
36. 1,426*l.* 7*s.* 4*d.* 486*l.* 15*s.* 1*d.* (including fitting of lantern.)
37. 1857, 8*l.* 12*s.* 6*d.* 1858, 8*l.* 17*s.* 3*d.*
38. 1857, oil, 451 gallons; wicks, 84 yards. 1858, oil, 436 gallons; wicks, 72 yards.
39. See Lighthouses, General Return, 19.
40. Concentric cotton, 7½*d.* per yard. 1857, 2*l.* 12*s.* 6*d.* 1858, 2*l.* 5*s.* 4*l.* Nil.
42. See Lighthouses, General Return, 19.
43. 1852, 1,902*l.* 2*s.* 1*d.* 1858, 544*l.* 3*d.* Total for 1852, 374*l.* 9*s.* 5½*d.* (includes the Coquet Buoys, &c.)
44. 1852, 286*l.* 1*s.* 3*d.* 1858, 287*l.* 15*s.* 10*d.* See Lighthouses, General Return, 19.
- 45, 46, 47. Nil. See Lighthouses, General Return, 19.
- 48, 49. In 1854, the Corporation having adopted a red shade for marking rocks to the southward, and the Committee of Elder Brethren on the spot having concurred in the suggestion of Mr. Hepplewhite, Harbour Master, Warkworth, for a red light from the lantern in a northerly line to lead vessels clear of Boulmer Rocks, it was fitted.
50. Committees of the Elder Brethren.
51. Committees: 1857, 23rd May, 15th August weather prevented a landing, 17th August. 1858, 2nd October, 1st October weather prevented a landing.
52. No.
53. Three burners; two reservoirs; two receivers. In the bottom of the tower. Length of oil cellar, 10 feet 10½ inches; breadth, 8 feet 8½ inches; height, 10 feet 9½ inches.
54. Barometer with thermometer attached. Aneroid barometer with thermometer. Internal thermometer.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Not relieved.

CORPORATION OF TRINITY HOUSE, LONDON.

5.

TYNEMOUTH.

The Castle Yard.

3. No agent. Principal lightkeeper acts as local agent. Samuel Wesenraft, Tynemouth Lighthouse, near North Shields
4. One.
5. Not known. See General Return, 19.
6. Not known.
7. No record, not having been erected by Trinity House.
8. About 1662 as a coal fire. 11th March 1802 as an oil light.
9. Not known. Built by Sir Edward Villiers.¹
10. Sea light.
11. Sandstone; solid wall, at base 4 feet 9 inches, at top 2 feet 5 inches; coated with cement; white; four-sided or square; lantern gallery three parts round.
12. Dr. Faraday's.

CORPORATION OF TRINITY HOUSE, LONDON.

21.

HARWICH, HIGH.

Entrance of Harwich Harbour, South of the Town. Upper Light in High Tower.

3. The Light Committee of the Board.
4. Two towers. N. W. by N.; S. E. by S. 218 yards; two lights in the High Tower. Upper Light 33 feet above the lower.
5. November 1664. See General Return, 19.
6. Sir William Batten, Surveyor to the Navy, and 104 owners and masters of ships trading to Newcastle, Sunderland, and farther northward.
7. Best position in line with the low light to lead into the harbour.
8. About 1,665. 31st March 1818, from new tower as an oil light; raised to its present position, 1822.
9. Builder, Mr. Lee; Engineer, Daniel Alexander. If by contract or otherwise, not known. Built by lessee.
10. Sea light.
11. Brick (on a wood pile foundation); inner and outer wall (inner wall, 9 inches; vacuity, 6 inches; outer wall, 12 inches); octagonal; gallery railing before the light-room window; railing round the base. Not coated, white.
12. Mr. Faraday's.
13. 85 feet.
14. 69 feet.
15. 9 miles.
16. 13 miles.
17. 110°. S. 20½ W.; S. 89½ E.
18. Fixed; bright.
19. Not revolving.
20. See Lighthouses, General Return, 19.
21. Catoptric. Argand lamps, burners ¾ of an inch, and parabolic reflectors 21 inches diameter, 9 inches deep.
22. 9 burners.
23. No alteration.
24. Robert Wilkins and Son, London.
25. Faraday's tubes, 1½ inch diameter, over the flames of lamps and air openings round the tower, with pipes leading to ventilator in centre of lantern floor.
26. None.
27. None.
28. 15 days.
29. Not known; built by lessee; two dwellings, 923*l.* 6*s.* 2*d.*
30. Completed.
31. No lantern. Diameter of light-room, 10 feet; height of window, 5 feet 8 inches; width of ditto, 9 feet 5 inches.
32. 31,730*l.* 1*s.* (the two lighthouses), 1st January 1837.
33. 54*l.* 6*s.* 11*d.*, including Low Lighthouse.
34. 25*l.* 19*s.* 2*d.*, including Low Lighthouse. Not by contract. Once in four years.
35. Three for both lighthouses; one at 65*l.* per annum, one at 46*l.* 10*s.* per annum, and one at 45*l.* per annum, a suit of clothes annually, and coal, oil, and furniture for dwellings.
36. Not known.
37. 1857, 13*l.* 2*s.* 3*d.*, including Harwich Low Light. 1858, 8*l.* 11*s.* 11*d.*, ditto.
38. 1857, oil, 216 gallons; wicks, 37 dozen. 1858, oil, 328 gallons; wicks, 56 dozen. For both lights in High Tower.
39. See Lighthouses, General Return, 19.
40. Argand cotton, 2*s.* 6*d.* per gross. 1857, 7*s.* 8*d.*; 1858, 11*s.* 8*d.* For both lights in High Tower.
41. Nil.
42. See Lighthouses, General Return, 19.
43. 1852, 1,016*l.* 12*s.* 10*d.*; 1858, 670*l.* 5*s.* 2*d.* Total for 1852, 3,850*l.* 16*s.*, including the Harwich Low Lighthouse.
44. 1852, 306*l.* 3*s.* 5*d.*, including Low Light. 1858, 267*l.* 18*s.* 8*d.*, ditto. See Lighthouses, General Return, 19.

 45. 46, 47. Nil. See Lighthouses, General Return, 19.
 - 48, 49. February 1855; wreck returns to Board of Trade from Commander Scott, transmitted by their Lordships, wherein it is stated that Mouse and Shears (Maplin) are not sufficiently strong and properly directed to guide vessels navigating that part of river Thames, masters having been unable to distinguish Mouse Light from lights shown by vessels at anchor.
- Wrecks (on the Blacktail Spit) found to have occurred in two cases during heavy snow and continual squalls from the north-east, and in the third in dull squally weather, the lead in this last case having been once only half-hour. Board of Trade informed that Elder Brethren are of opinion that losses are not attributable to inefficiency or want of strength in either of the lights mentioned or in the Nore, which are perfectly effective for the purposes intended, especially for clearing the Maplin and Blacktail Sands, provided the masters of vessels pay proper attention, but that they resulted in each case from the want of ordinary precaution and seamanship, and from recklessness in being under weigh at such times and in such weather.
50. Committees of the Elder Brethren, and by officer in charge of monthly relief.
 51. Committees, 1857, 25th January; 1858, 19th March.
 52. No.
 53. 1 lamp, 3 burners, 1 refractor, 1 reservoir, 1 receiver, 1 red shade; oil stored in room adjoining living room; diameter of oil room, 3 feet; height, 7 feet.
 54. Aneroid barometer with thermometer attached; internal thermometer and compass.
 55. See Lighthouses, General Return, 19.
 56. Ditto, ditto.
 57. Once a month; two of the three keepers are constantly at the lighthouse and one on shore in rotation. Relieved by steam vessel.

27.

CHAPMAN.

Chapman Head, Sea Reach, River Thames.

BEACHY HEAD.

Belletoute Cliff, 300 feet below the Summit of the Head and 96½ feet distant from the Edge of the Cliff.

3. Capt. James Hewett, R.N., Eastbourne, Sussex.
4. One.
5. First, 1670; renewed in 1812 and 1826. See General Return, 19.
6. 1670, John William Russell, Silas Titus, and Edward Andrews. 1812, Capt. Harvey, R.N., (through the Admiralty). 23rd December 1826; Capt. Mingaye, R.N., and Thomas Bayley, Pilot of Deal.
7. To mark the headland and clear the shoals to the eastward.
8. 1st October 1828, from a temporary wooden building; 11th October 1834, from the present lighthouse.
9. Builder, William Hallett; Engineer, James Walker; Superintendent of the Works, George Burrell. By contract.
10. Sea light.
11. Stone, with facing of granite; solid wall, at base 3 feet 9 inches, at top 3 feet; not coated; white; circular. Lantern gallery with iron railings.
12. Dr. Faraday's.
13. 47 feet.
14. 235 feet.
15. 18 miles.
16. 23 miles.
17. 1859. S. 53 E., N. 48 W.
18. Revolving; bright.
19. Perfect revolution in six minutes, showing the full arc of the reflectors every two minutes, and a flash every fifteen seconds.
20. See Lighthouses, General Return, 19.
21. Catoptric. Argand lamps, burners ½ of an inch, and parabolic reflectors 21 inches diameter, 9 inches deep. Clock-work revolving machine.
22. Thirty burners.
23. No alteration.
24. Reflectors, revolving machine, &c., Robinson & Wilkins, London. Lamps, &c., R. Wilkins & Son, London.
25. Faraday's tubes, 1½ inch diameter over the flames of the lamps, and openings round pedestal and in the roof of the lantern.
26. None.
27. None.
28. 39 days.
29. In 1828, 4,482*l.* 13*s.* 7*d.* including lantern and apparatus. Alterations in 1835, including all charges, 3,324*l.* 0*s.* 1*d.*
30. Completed.
31. Diameter, 13 feet 6 inches. Height: pedestal, 4 feet 6 inches; glass, 7 feet 6 inches; glass to vane, 10 feet; total, 22 feet. Included in No. 29.
32. Not purchased.
33. 29*l.* 9*s.* 5*d.* since construction.
34. 18*l.* 4*s.* 1*d.*; not by contract; once in four years.
35. Two; one at 6*s.* and one at 46*l.* 10*s.* per annum, a suit of clothes annually, and coal, oil, and furniture for dwellings.
36. Included in No. 29.
37. 1857, 91*l.* 15*s.* 10*d.* 1858, 16*l.* 16*s.* 10*d.*
38. 1857, oil, 981 gallons; wicks, 183 dozen. 1858, oil, 1,004 gallons; wicks, 231 dozen.
39. See Lighthouses, General Return, 19.
40. Argand cotton, 2*s.* 6*d.* per gross. 1857, 1*l.* 13*s.* 1½*d.* 1858, 2*l.* 8*s.* 1½*d.*

16. 9 miles.
17. 290°, N. 68 E., S. 42 E.
18. Fixed; red and bright.
19. Not revolving.
20. See Lighthouses, General Return, 19.
21. Dioptric, 7 refractors, 8 to the circle, with 19 zones of prisms, 13 above and 6 below the refractors, and 2 sections of circles of red shades outside the lens and zones; fountain, 4 concentric wick lamp, with regulating condenser.
22. 1st order.
23. 1859, dioptric, substituted for catoptric apparatus, of 13 Argand lamps and refractors, by direction of the Board. No alteration in character.
24. Optical parts, Henry Lepaute, Paris. Frame, lamps, shade, &c., William Wilkins and Company, London.
25. Faraday's tube, 4½ inches diameter over the flame of the lamp, and by openings in lantern pedestal.
26. Bell of 3 cwt., sounded by clockwork machinery.
27. Not in use till 1859.
28. 75 days; this applies to the light on the Point.
29. 19,830*l.* 5*s.*
30. Completed.
31. Diameter, 14 feet. Height: pedestal, 4 feet 6 inches; glass, 10 feet; glass to vane, 14 feet; total height, 28 feet 6 inches. Price 1,382*l.* 19*s.* 3*d.*
32. Not purchased.
33. No average yet obtained. Old light, 46*l.* 12*s.* since construction.
34. Not yet painted or coloured since construction.
35. Three; one at 60*l.* per annum, one at 49*l.* 10*s.* per annum, and one at 48*l.* per annum; 1*s.* 6*d.* per diem for victualling, a suit of clothes annually, and coal, oil, and furniture for living rooms.
36. 1,087*l.* 10*s.*, including all charges.
37. Not exhibited in those years from present tower.
38. 1857, oil, 551 gallons; wicks, 173 dozen, by the catoptric light. 1858, oil, 538 gallons; wicks, 179 dozen, ditto.
39. See Lighthouses, General Return, 19.
40. Argand cotton, 2*s.* 6*d.* per gross. 1857, 1*l.* 16*s.* 0*d.* 1858, 1*l.* 17*s.* 3*d.*, for the catoptric light.
41. 244*l.* 15*s.* 6*d.*
42. See Lighthouses, General Return, 19.
43. 1852, 1,025*l.* 16*s.* 8½*d.* 1858, 1,883*l.* 15*s.* 5*d.* Total for 1852, 7,879*l.* 4*s.* 6½*d.* (includes the Saint Catherine's and two Hurst Lighthouses).
44. Not exhibited in those years from present tower. See Lighthouses, General Return, 19.
- 45, 46, 47. Nil. See Lighthouses, General Return, 19.
48. 1st January 1859. Hydrographer, Admiralty, observed that proposed bearing of white light to W.¼ N. passes within one mile of Durlstone Head, suggests W.¼ S., or other alteration. This was an error in the preliminary notice; limit of W.¼ N. closer to Durlstone Head than was intended, light actually bears to due west. Notice to that effect issued on exhibition of light.
49. Nil.
50. Committees of the Elder Brethren and Agent.
51. Committees: 1857, 25th April; 10th June. 1858, 3rd March; 10th June; 21st October. Agent: 21st February; 27th March; 18th June; 19th October; 26th December. 1858, 11th March; 28th June; 24th September; 10th December. These inspections apply to the light on the Point.
52. No.
53. 5 lamps, with burners complete, 2 reservoirs, 2 receivers, 2 sets of red shades; oil is stored in the basement of tower; diameter of oil cellar, 14 feet 10 inches; height of ditto, 10 feet 8 inches.
54. Barometer with thermometer attached; internal thermometer.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Once a month; two of the three keepers are constantly at the lighthouse, and one on shore in rotation; relieved by sailing tender.

36.

HURST, HIGH.

The Beach of Hurst Point.

3. Robert Willis, East Cowes, Isle of Wight.

44. 1852, 508*l.* 17*s.* 6*d.*, including Low Light. 1858, 656*l.* 1*s.* 6*d.*, ditto. See Lighthouses, General Return, 19.
45. 46, 47. Nil. See Lighthouses, General Return, 19.
46. In December 1858, the Board of Trade sanctioned expenditure of lightvessel off Shambles, but in doing so suggested whether, when the lightvessel was so placed, one of the lights on the Bill of Portland might not be dispensed with. Their Lordships were acquainted that the purpose served by the two lights at Portland is not only that of giving them a distinctive character, but also that of leading vessels with the lights in one between the Shambles and the Race, which channel is now much frequented, and would be rendered no longer available during the night by the discontinuance of one of the lights. January 1859, their Lordships rejoin that they are still of opinion that it is not necessary to have leading lights to clear a danger as well as a lightship on that danger, but that, as Elder Brethren consider it important to retain both the Portland lights, they do not desire to press the objection.
49. Nil.

46.

PLYMOUTH BREAKWATER.

The West End of the Breakwater.—The Upper Light.

3. Thos. Edward Ditcham, Alma Place, Plymouth.
4. Two, in one tower. Upper 15 feet above the lower light.
5. November 1812. Lighthouse proposed, November 1820, by the Admiralty. See Lighthouses, General Return, 19.
6. The mayor and several merchants of Plymouth (through the Admiralty). See General Return, 19.
7. For leading through the western entrance into Plymouth Sound.
8. 15th July 1813, from a lightvessel. 1st June 1844, from present lighthouse.
9. Builder, not known (built by Admiralty). Engineers, Messrs. Rennie and Whidbey. Superintendent of the Works, William Stewart. Not known as to contract.
10. Sea light.
11. Granite; solid wall, at base 5 feet 6 inches, at top 1 foot 9 inches; not coated or coloured; circular; lantern gallery with gun-metal stanchions.
12. Dr. Faraday's.
13. 76 feet.
14. 63 feet.
15. 8½ miles.
16. 9 miles.
17. 360°. The whole circle.
18. Fixed; red and bright; 298° 7' 30" red; 61° 52' 30" bright.
19. Not revolving.
20. See Lighthouses, General Return, 19.
21. Dioptric, 4 refractors of 6 to the circle, with 17 zones of prisms, 12 above and 5 below the refractors; fountain, 3-concentric wick lamp, with regulating condenser; red shade outside the lens.
22. 2nd order.
23. August 1845. Red shade fitted by direction of the Board. January 1853. Zones substituted for mirrors.
24. Optical parts, Henry Lepaute, Paris. Frame, lamp, shades, &c., R. Wilkins and Son, London.
25. Faraday's tube, 3½ inches diameter over the flame of the lamp, and ventilators in lantern floor.
26. Bell of 7 cwt., sounded by clockwork machinery.
27. 14 days.
28. 14 days.
29. Not known; built by the Admiralty.
30. Completed.
31. Diameter, 12 feet 6 inches. Height: pedestal, 4 feet 9 inches; glass, 7 feet 6 inches; glass to vane, 10 feet 9 inches; total, 23 feet. Price not known.
32. Not purchased. Management transferred to Trinity House.
33. 2*l.* 5*s.* 9*d.* since construction.
34. 1*l.* 5*s.* 8*d.* (internal and lantern only). Not by contract. Not painted or coated externally.
35. Three (for both lights); one at 36*l.* 10*s.*, one at 45*l.* per annum, and house rent, one 15*l.*, two 10*l.* each, per annum, a suit of clothes annually, and coal, oil, and furniture for living rooms.
36. Apparatus not known. Zones, 53*l.* 7*s.* Freight, 13*l.* 7*s.* 4*d.*
37. 1857, 16*l.* 10*s.* 10*d.*, for both lights. 1858, 10*l.* 5*s.* 7*d.* ditto.
38. 1857, oil, 195 gallons; wicks, 32 yards. 1858, oil, 207 gallons; wicks, 24 yards.
39. See Lighthouses, General Return, 19.
40. Concentric cotton, 6½*d.* per yard. 1857, 17*s.* 4*d.* 1858, 13*s.*
41. 77*l.* 9*s.* 8*d.*
42. See Lighthouses, General Return, 19.
43. No toll.

17. 11° . S. 56 W.; S. 67 W.
18. Fixed; bright.
19. Not revolving.
20. See Lighthouses, General Return, 19.
21. Dioptric. One refractor of three to the circle, and Argand lamp burner $\frac{1}{2}$ of an inch in diameter.
22. 6th order.
23. December 1854. 12-inch parabolic reflector taken away, and lens substituted by direction of the Board.
24. Optical part, Henry Lepaute, Paris. Lamp, Wm. Wilkins London.
25. No special mode.
- 26, 27, 28, 29, 30. See Return for Upper Light.
31. Light-room window, 18 inches by 6 inches.
- 32, 33, 34, 35. See Return for Upper Light.
36. See Return for Upper Light.
37. Included in Return for Upper Light.
38. 1857, oil, 46 gallons; wicks, 8 dozen. 1858, oil, 34 gallons; wicks, 7 dozen.
39. See Lighthouses, General Return, 19.
40. Argand cotton, 2s. 6d. per gross. 1857, 1s. 8d. 1858, 1s. 5 $\frac{1}{2}$ d.
41. See Return for Upper Light.
42. See Lighthouses, General Return, 19.
43. No toll.
44. See Return for Upper Light.
45. 46, 47. Nil. See Lighthouses, General Return, 19.
48. November 1854, Mr. Thompson, Queen's Harbour-master, Plymouth, that the additional light lately placed for the purpose of marking the Knap and Draystone shows to the west of the Draystone and the east of the Knap.
49. Committee deputed to act immediately. Floating light-reflector in use not marking the limit with sufficient distinctness, a fourth order refractor was substituted.
50. Committees of the Elder Brethren and Agent.
51. Committees : 1857, 30th June; 11th July; 14th, 27th October. 1858, 10th September; 1st October. Agent : 1857, 17th January; 22nd February; 26th March; 27th April; 5th, 6th, 11th, 25th, 29th May; 1st, 11th, 18th, 30th, 29th June. None recorded for second half year. 1858, 2nd, 5th, 6th, 22nd January; 13th, 17th February; 5th, 18th March; 8th, 20th April; 4th, 27th May; 10th, 15th June; 7th, 31st July; 4th, 10th, 20th August; 1st, 13th September; 10th, 21st October; 13th, 27th November; 14th, 22nd December.
52. No.
53. None. In base of the tower.
54. None.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Once a month. Two of the three keepers are constantly at the lighthouse, and one on shore in rotation. Relieved by sailing tender.

48.

EDDYSTONE.

On the Rock off Plymouth.

3. Thomas Edward Ditcham, Alma Place, Plymouth.
4. One.
5. About 1698.
6. Not stated, except that lighthouse was erected at the request of the navigation. See Lighthouses, General Return, 19.
7. To indicate the position of the rock.
8. 1698 as a coal fire; rebuilt 1734, and 15th November 1759, (present lighthouse); 10th September 1810 as an oil light.
9. Builder and Engineer, John Smeaton. Contract for stone only.
10. Sea light.
11. Granite; entirely solid up to 12 feet from base; solid wall commencing 263 feet from base; two feet six inches, one foot six inches. Not coated. Red and white in alternate horizontal bands. Circular. Lantern gallery with iron railing.
12. Dr. Faraday's.
13. 89 feet.
14. 72 feet.
15. 9 miles.
16. 14 miles.
17. 360°. The whole circle.
18. Fixed; bright.
19. Not revolving.
20. See Lighthouses, General Return, 19.
21. Dioptric. Six refractors of six to the circle, with 17 zones of prisms, 12 above and five below the refractors. Fountain, three concentric wick lamp, with regulating condenser.
22. 2nd order.
23. 1845, light altered as above from 24 Argand lamps and parabolic reflectors by direction of the Board. No alteration in character.
24. Optical parts, Henry Lepaute, Paris. Frame, lamps, &c., R. Wilkins and Son, London.
25. Faraday's tube, $\frac{3}{4}$ inches diameter over the flame of the lamp.
26. None.
27. None.
28. 16 days.
29. Not known. Constructed by lessees.
30. Completed.
31. Diameter, 10 feet. Height; pedestal, 6 feet 6 inches; glass, 8 feet 9 inches; glass to vane, 12 feet 9 inches; total, 28 feet. 2,818l. 10s. 9d.
32. Not purchased, lease expired.
33. 22l. 17s. 10d. since 1822.
34. 16l. 7s. 3d. Not by contract. Once in four years.
35. Four; one at 60l. and three at 45l. 10s. per annum; 1s. 6d. per diem per man for victualling, a suit of clothes annually, and coal, oil, and furniture for living rooms.
36. 1,154l. 15s. Fitting included in that of lantern. Transport, 85l. 5s. 7d.
37. 1837, 10l. 13s. 10d. 1858, 10l. 18s. 7d.
38. 1837, oil, 210 gallons; wicks, 26 yards. 1858, oil, 221 gallons; wicks, 18 yards.
39. See Lighthouses, General Return, 19.
40. Concentric cotton, 6 $\frac{1}{2}$ d. per yard. 1857, 14s. 1d. 1858, 9s. 9d.
41. Nil.
42. See Lighthouses, General Return, 19.
43. Midsummer quarter 1852, 1,905l. 9s. Ditto, 1858, 1,844l. 5s. 7d. Total income for 1852, 7,865l. 19s. 2 $\frac{1}{2}$ d.
44. 1852, 412l. 16s. 11d. 1858, 407l. 4s. 9d. See Lighthouses, General Return, 19.
45. August 1858. H. King, Penzance, complaining of charge for Eddystone and Breakwater lights in and out of Plymouth for the same cargo, the vessel not having broken bulk, thinks the lights not due twice for the same voyage. Informed that lights are due each time of passing, unless the second passage be made within the same day of 24 hours, counting from midnight to midnight.
- 46, 47. Nil. See Lighthouses, General Return, 19.
48. Nil.
49. Nil.
50. By Agent. Visited by Committees of the Elder Brethren. (See No. 51.)
51. Committees prevented landing by the weather: 1857, 23rd April; 24th James 10th July; 1858, 23rd March. Inspections by Agent : 1857, 14th, 26th January, 11th June; 2nd, 8th, 19th, 27th July; 24th August; 26th September. 1858, 13th February; 17th April; 12th, 30th May; 12th September.
52. No.
53. One lamp complete; three burners. In upper storeroom (second room over stairs from entrance). Diameter, 12 feet 4 inches; height, 7 feet 11 inches.
54. Barometer, with thermometer attached. External and internal thermometers.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Once a month. Three of the four keepers are constantly at the lighthouse, and one on shore in rotation. Relieved by sailing tender.

CORPORATION OF TRINITY HOUSE, LONDON.

45. 46, 47. Nil. See Lighthouses, General Return, 19.
46. October 1859. Commander Lory, R.N., St. Keverne. "That the Falmouth Harbour Light, being in the bight of the bay, is useless as a guide to vessels going up and down channel, and the weather in general being hazy during the winter months, it cannot be seen by vessels approaching the Manacles. If the Elder Brethren had caused it to be fixed on these rocks instead of St. Anthony's Point, it would have guarded against every danger as well as be a safe guide to Helford and Falmouth."
- These observations were incidental to Commander Lory's proposal for a light on the Manacles, and were not concurred in.
49. Nil.
50. Committees of the Elder Brethren and Agent.
51. Committees: 1857, 23rd June. 1858, 11th September. Agent: 1857, 19th February; 27th March; 14th May; 5th August; 27th September. 1858, 25th March; 15th April; 24th June; 22nd November.

56. Ditto, ditto.
57. Not relieved.

54.

BISHOP ROCK.

Scilly, the South-westernmost of the Group.

3. Hugh Tregarthen, Tresco, Scilly.
4. One.
5. No application; proposed by Inspecting Committees of the Elder Brethren.
6. See Lighthouses, General Return, 19.
7. To mark the westernmost rocks of the Scilly Islands.
8. 1st September 1858.
9. Engineer, James Walker. Superintendent of the Works, N. Douglass. Contract for stone only, Messrs. Freeman.
10. Sea light.
11. Granite tower, entirely solid to 45 feet above high water; solid wall, at base 4 feet 9 inches, at top 2 feet; not coated or coloured; circular in a battering form; lantern gallery with iron railings and flagstaff.
12. Dr. Faraday's.
13. 147 feet.
14. 110 feet.
15. 11½ miles.
16. 16 miles.
17. 360°. The whole circle.
18. Fixed; bright.
19. Not revolving.
20. See Lighthouses, General Return, 19.
21. Dioptric. 8 reflectors of 8 to the circle, with 19 zones of prisms, 13 above and 6 below the refractors; fountain, 4 concentric wick lamp, with regulating condenser.
22. 1st order.
23. None.
24. Optical parts, Henry Lépaute, Paris. Frame, lamps, &c., W. Wilkins and Co., London.
25. Faraday's tube, 4½ inches diameter over the frame of the lamp, and by openings in the lantern pedestal.
- 26, 27. None.
28. 10 days in the four months, September, October, November, December.
29. 36,559*l.* 18*s.* 9*d.* for Tower on Rock and dwellings on mainland.
30. Completed.
31. Diameter, 14 feet. Height: pedestal, 5 feet; glass, 10 feet 3 inches; glass to vane, 12 feet 9 inches; total, 28 feet, 1,452*l.*
32. Not purchased.
- 33, 34. Not exhibited until 1st September 1858.
35. Four; one at 5*l.* per annum, and three at 4*l.* 10*s.* each per annum, 1*s.* 6*d.* per diem for victualling, a suit of clothes annually, and coal, oil, and furniture for dwellings.
36. 1,313*l.* 10*s.* Delivered at the works. Fitting included in cost of lighthouse, &c.
37. Not exhibited until 1st September 1858.
38. 1857, nil. 1858, oil, 190 gallons, wicks, 12 yards, during the 4 months ending 31st December.
39. See Lighthouses, General Return, 19.
40. Concentric cotton, 7½*d.* per yard. 1857, nil. 1858, 7*s.* 6*d.* (for 4 months).
41. 24*l.* 15*s.*
42. See Lighthouses, General Return, 19.
43. Not established till after Midsummer 1858. Toll not collected till 1859.
44. Nil in 1852.
45. The Elder Brethren were of opinion that there should not be any toll for this light, in consideration of its having been commenced before the passing of the Merchant Shipping Act, 1854, and of the trade not having invited its erection nor pledged themselves to contribute; the work having been regarded as an adjunct to the Scilly Light, the tolls for which are sufficient to maintain both. The Board of Trade considered principle now acted on to be that a toll should be imposed for every new lighthouse, and that if the aggregate sum collected for light dues amounts to more than is required for the erection and maintenance of lighthouses generally, the surplus should be dealt with by reducing the tolls generally, rather than by making any special exemption in the case of any particular light. An Order in Council was accordingly prepared by their Lordships, and transmitted to the Trinity House, upon receipt of which the Elder Brethren stated that they could not fail to mark with regret that the amount of the toll proposed by their Lordships to be levied in this case should entail so heavy a charge upon ships passing the light to or from British ports.
- 46, 47. Nil. See Lighthouses, General Return, 19.
- 48, 49. Nil.
50. Committees of the Elder Brethren; Agent in 1858.
51. Committees: 1857, 22nd June, 10th July, weather prevented a landing. 1858, 12th June; 12th, 13th September. Agent: 1858, 28th September; 16th, 17th October; 7th November, 7th, 9th, 14th, 28th, 30th December, weather prevented a landing.
52. No.
53. Five lamps; 5 burners, 1 reservoir; 1 receiver. Oil stored on the first floor of the lighthouse. Diameter of oil cellar, 12 feet 6 inches; height, 8 feet 11 inches.
54. Barometer, with thermometer attached; external and internal thermometer.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Once a month. 3 of the 4 keepers are constantly at the lighthouse and one on shore in rotation. Relieved by sailing tender, with the assistance, when necessary, of a hired boat's crew.

39. See Lighthouses, General Return, 19.
40. Concentric cotton, 7*1d.* per yard. 1857, 1*l.* 19*s.* 4*1d.* 1858, 1*l.* 0*s.* 7*1d.*
41. Nil.
42. See Lighthouses, General Return, 19.
43. Midsummer quarter, 1852, 495*l.* 12*s.* 6*1d.* Ditto, 1858, 424*l.* 19*s.* 7*d.* Total for 1852, 1,790*l.* 12*s.* 3*d.*
44. 1852, 362*l.* 1*s.* 5*d.*; 1858, 301*l.* 13*s.* 9*d.* (including Low Light). See Lighthouses, General Return, 19.
- 45, 46, 47. Nil. See Lighthouses, General Return, 19.
- 48, 49. April 1858, Mr. Heaven, Lundy, that light is not of the slightest use to vessels when most in want of it, in thick and blowing weather, but also in many dark nights, because when the island itself is free from it, the lighthouse stands so high that it is capped by fog. Suggests low lighthouses on north and south extremities of island, one with bell, the other with gong or cannon.
- The question of additional marking for the Lundy in foggy weather is still under consideration. The Elder Brethren propose to place a gun on the west side of the island.
50. Committees of the Elder Brethren and Agent.
51. Committees: 1857, 26th June, 15th September, 26th October; 24th April, weather prevented a landing. 1858, 12th June. Agent: 1857, 29th May. 1858, 17th February, 27th April.
52. No.
53. Three lamps, with burners complete; one reservoir; one receiver; oil stored in a vault below ground floor of tower. Diameter of oil store, 17 feet 7½ inches; height, 7 feet 5½ inches.
54. Barometer, with thermometer attached; internal thermometer and compass.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Not relieved.

59.

LUNDY, LOW.

Chapel Hill, Lundy Island.

3. B. H. Bailey, Milford, Pembrokeshire.
4. Two in one tower. Lower 70 feet below the upper light.
5. March 1803; renewed, December 1818.
6. 1803, Thomas Hogg and trade of Bideford (per Sir Vere Hunt). 1818, trade of Liverpool, London, Bideford, Cardiff, and Newport. (See Lighthouses, General Return, 19.)
7. To clear the rocks in the vicinity.
8. 21st February 1890.
9. Builder, Joseph Nelson. Engineer, Daniel Alexander. Superintendent of the Works, James Turnbull. By contract.
10. Sea light.
11. Granite; inner and outer wall, at base 3 feet 6 inches, at top 2 feet, vacuity 3 inches; not coated; white; circular; gallery with iron railing outside lightroom window.
12. Dr. Faraday's.
13. 96 feet.

45. 46. See Lighthouses, General Return, 19.
47. On oversca voyages the Bardsey light is chargeable once only for the whole voyage out and home, but is collected on the first half of the voyage, that is to say, on the outwards passage of a British ship, and on the inward passage of a foreigner. In September, 1856, a letter was received from the Collector at Liverpool, advising that it should be collected on the inward passage from all oversca vessels indiscriminately, lest the distinction British exempt in and foreign chargeable in, should give rise to an impression that the privileged vessels were subject to greater exaction than British ships. The Elder Brethren considered it would be objectionable to pursue a different course at Liverpool to that followed at other ports, and that the alteration suggested might probably involve a loss of revenue, but that a notice should be posted up at the Custom House explanatory of the charge for the Bardsey light, to prevent any erroneous impression as to foreigners paying more for the entire voyage than British ships.
48. Nil.
49. Nil.
50. Committees of the Elder Brethren and Agent.
51. Committees: 1857, 5th March; 27th April; 20th July, 1858, 16th January; 20th July. Agent: 1857, 5th March, 1858, 23rd March.
52. No.
53. Four burners. On the lower or basement floor. Dimensions of oil room, 14 feet 3 inches by 10 feet 10 inches; height, 8 feet 6 inches.
54. Barometer, with thermometer attached; external and internal thermometers and compass.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Not relieved.

14. 42 feet.
15. 7 miles.
16. 9 miles.
17. 259°. W.; S. 11 E.
18. Fixed; bright and red.
19. Not revolving.
20. See Lighthouses, General Return, 19.
21. Catoptric. Argand lamps, burners $\frac{3}{4}$ of an inch, and parabolic reflectors 21 inches diameter, 9 inches deep; red shade on two of the reflectors.
22. 9 burners.
23. None.
24. Robert Wilkins and Son, London.
25. Faraday's tubes, 13 inches diameter over the flames of the lamps; ventilators in lantern pedestal and air openings round the room below the lantern.
26. Bell of 3 cwt., sounded by clockwork machinery.
27. 32 days.
28. 32 days.
29. New Lighthouse (1844), 5,849*l.* 5*s.* 9*d.* Dwellings, 2,052*l.* 4*s.* 3*d.*
30. Completed.
31. Diameter, 12 feet. Height: pedestal, 4 feet 6 inches; glass, 7 feet 6 inches; glass to vane, 12 feet; total, 24 feet. Lantern and alterations to apparatus (1844), 1,284*l.* 14*s.* 4*d.*
32. Not purchased.
33. 21*l.* 15*s.* 7*d.* since 1822.
34. 21*l.* 0*s.* 4*d.*; not by contract; once in four years.
35. Two; one at 65*l.*, one at 46*l.* 10*s.* per annum, a suit of clothes annually, and coal, oil, and furniture for living rooms.
36. Apparatus not known; alterations in 1844 included in price of lantern.
37. 1857, 8*l.* 17*s.* 1858, 5*l.* 7*s.* 9*d.*
38. 1857, oil, 411 gallons; wicks, 39 dozen. 1858, 419 gallons; wicks, 40 dozen.
39. See Lighthouses, General Return, 19.
40. Argand cotton, 2*s.* 6*d.* per gross. 1857, 8*s.* 1*½d.* 1858, 8*s.* 4*d.*
41. 192*l.* 8*s.* 6*d.*
42. See Lighthouses, General Return, 19.
43. Midsummer quarter, 1858, 354*l.* 7*s.* 11*d.* Total income for 1858, 193*l.* 8*s.* 7*½d.* (includes buoys in the River Dec).
44. 1852, 24*l.* 19*s.* 7*d.* 1853, 236*l.* 14*s.* 9*d.* See Lighthouses, General Return, 19.

48. Nil.
49. Nil.
50. By local agent.
51. 1857, 25th February; 23rd April; 8th, 15th, 30th May; 17th June; 18th July; 19th August; 11th September; 7th October; 12th November; 11th December. 1858, 8th March; 5th, 30th April; 31st May; 9th July; 12th August; 24th September; 28th October; 1st November; 1st December.
52. No.
53. 5 lamps, 1 reservoir, 1 overflow or receiver, 1 refractor, 30 mirrors. In an outbuilding in front of the dwellings, 66 feet west of the tower. Length of oil cellar, 19 feet; breadth, 8 feet; height, 8½ feet.
54. Barometer, with thermometer attached; external and internal thermometers and compass.
55. See Lighthouses, General Return, 19.
56. Ditto, ditto.
57. Not relieved.

CIRCULAR No. II.—FLOATING LIGHTS.—GENERAL RETURN.

I. The Corporation of Trinity House of Deptford Strond, Trinity House, London, E.C.

II. List of floating lights under the superintendance of the Trinity House:—

1. Spurn.
2. Dudgeon.
3. Lynn Well.
4. Leman and Ower.
5. Haisbro'.
6. Newarp.
7. Cockle.
8. St. Nicholas Gatt.
9. Stanford.
10. Shipwash.
11. Sunk.
12. Galloper.
13. Cork.
14. Kentish Knock.
15. Swin Middle.
16. Mouse.
17. Nore.
18. Tongue.
19. Prince's Channel.
20. Girdler.
21. Goodwin.
22. Gull.
23. South Sand Head.
- * 24. Owers.
25. Calshot.
26. Warner.
27. Bembridge.
28. Shambles.
29. Seven Stones.
30. English and Welsh Grounds.
31. Helwicks.
32. Cardigan Bay.
33. Bahama Bank.

III. If to mark dangers, as near to them as the light can be safely placed. If as leading lights, dependent on the character of the channel.

IV. Four; two at Blackwall, one at Yarmouth, one at Milford (at present lent to Admiralty for marking Holyhead breakwater). A shipkeeper in charge, but always a sufficient number of men on shore from the other vessels to form an available crew if required. The spare vessels are partially stored, and can be sent to sea within a few hours.

V. Name written on side; variation in the number and character of the lights; red colour; globe at each masthead.

VI. In the case of fixed lights, greater brilliancy; in others, by a revolving character. Two of the floating lights show an additional light of a red colour.

VII. Catoptric and dioptric.

VIII. The catoptric principle is found most suitable for lightvessels.

IX. Fixed; revolving.

X. Dependent on lights in vicinity.

XI. See below.—TABLE OF PRICES.

	Price	-	Fixed.	351 <i>l</i> .
Catoptric.	Ordinary repairs	-	10 <i>l</i> .	5 <i>s</i> . 4 <i>d</i> .
	Oil	{ Consumption-	6 galls.	3 qts. 0½ pts.
8 Burners.		{ Cost	-	1 <i>l</i> . 2 <i>s</i> . 8¾ <i>d</i> .
	Wicks	{ Consumption-	2 doz.	1½.
		{ Cost	-	5¾ <i>d</i> .
Catoptric.	Price	-	Revolving.	398 <i>l</i> . 10 <i>s</i> .
	Ordinary repairs	-	7 <i>l</i> .	13 <i>s</i> . 10 <i>d</i> .
4 Burners.	Oil	{ Consumption-	3 galls.	1 qt. 0¾ pt.
		{ Cost	-	11 <i>s</i> . 1¾ <i>d</i> .
	Wicks	{ Consumption-	1 doz.	4.
		{ Cost	-	3¾ <i>d</i> .
Dioptric.	Price	-	Fixed.	217 <i>l</i> .
	Ordinary repairs	-	Not known.	
5th Order.	Oil	{ Consumption-	1 gall.	3 qts. 1 pt.
		{ Cost	-	6 <i>s</i> . 3 <i>d</i> .
	Wicks	{ Consumption-	1 foot.	
		{ Cost	-	1½ <i>d</i> .

XII. Attached; one sheet showing apparatus, lantern, and revolving machinery, and one sheet showing fifth order dioptric.

XIII. Gongs are in use at all the lightvessels.

XIV. Not in use.

* Since these returns were prepared the Trinity House have placed a Light Vessel to mark the Varne Shoal, first exhibited on the 1st October, 1860.

XV.

XV. Nature and date of any applications for floating lights since 1st January 1845; nature and date of replies:—

STATIONS IN ENGLAND AND WALES.

1846.

Bahama Bank.

December.—R. L'Amont, Esq., that trade are desirous of having light thereat.

1847, January.—R. L'Amont, Esq., transmitting memorial from trade.

Complied with; lightvessel placed.

1850.

Princes Channel.

April.—J. R. Ward, Esq., recommending light between Tongue and Girdler.

Acquainted that Corporation have no present intention of placing light.

Light subsequently found desirable and placed.

1855.

Cardigan Bay.

February.—J. R. Ward, in a letter to an Elder Brother, on behalf of Port Madoc Committee of Royal National Society for Preservation of Life from Shipwreck, representing advantage which would be derived from light on Causeway running across Cardigan Bay.

Read.

April.—Shipowners and others requesting light on Sarn Badrig.

Visiting Committee to inspect locality.

1858, December.—Board of Trade, with memorial from Liverpool Underwriters' Association, for an additional light in Cardigan Bay.

Vessel has been built and light was shown on 1st July 1860.

Fairway Light, St. George's Channel.

September.—Board of Trade transmit resolution of Shipowners' Association, Liverpool, "That this meeting is of opinion that if such a light (Mr. Herbert's patent) can be securely and permanently established in such a position it would be very advantageous to shipping passing up and down St. George's Channel."

Elder Brethren are prepared to admit that a light placed in the Fairway of any frequented channel might be found useful as an adjunct to those by which the local dangers are marked, and offer no objection to improvement, provided a light could be securely and permanently kept in its proper place; but they fear that a vessel of that construction so placed would be liable to break adrift or be driven from her moorings, and that disastrous consequences might in such case ensue.

1859, September.—Board of Trade transmit letter from Mr. Lindsay, M.P., with enclosure from Liverpool, renewing proposal to place a light on Mr. Herbert's patent between the Tuskar and the Smalls.

Trinity House advert to previous reply, and having regard to recent improvements in lighting that channel, retain opinion that proposition is neither required nor judicious.

1857.

Scroby Sand and Stanford Channel.

November.—Mr. G. Simeson, recommending a lightship on the inner corner of the Scroby and another in the Stanford Channel.

Acquainted that his communication has been laid before the Board.

1859.

Cardarthen.

April.—Mr. Thomas, Esq., Kidwelly, proposing a lightvessel or bell buoy for Cefn Sidon Sands.

Acquainted that we have subject under consideration. (See Return for Buoys and Beacons.)

ENGLAND.
Circular II.

XV. to XIX.

FLOATING LIGHTS.—GENERAL RETURN.

XIX.

Telegraph Station at Entrance of English Channel.

December.—Board of Trade transmitting copy of a memorial from merchants and others for a floating fairway light and telegraph station in entrance of English Channel.

Elder Brethren are not in possession of information to enable them to judge of feasibility.

Board of Trade request opinion whether, supposing scheme to be practicable, Elder Brethren consider light would be of value as a sea mark.

Trinity House decline to express an opinion upon question of so entirely hypothetical a nature, more especially as it might influence statutory assent or dissent if required in the event of subject assuming more substantial form.

Board of Trade point out various features connected with proposal, and request opinion of Elder Brethren as to its use as a sea mark.

Supposing stability and permanence to be established, Elder Brethren do not consider any important benefit would be derived, but that entertaining strong doubts of permanence, consider it would be worse than no light at all.

STATIONS IN IRELAND.

1856.

Blackwater Bank.

February.—Alderman Greene, Wexford, recommending light thereon.

April.—Board of Trade, forwarding correspondence with Irish Board, and requesting to be informed if light is necessary; and if so, whether one of Mr. Herbert's vessels might not be tried there.

Trinity House consider that light may be advantageous, but cannot recommend a vessel on Mr. Herbert's plan in a situation not under immediate observation from shore.

June.—Board of Trade, submitting observations from Irish Board on relative advantages of a floating light and a lighthouse on Cahore Point. Elder Brethren consider a floating light the safer guide.

July.—Board of Trade concur that floating light is preferable, and have instructed Irish Board to take the usual course.

1857. March.—Irish Board, proposing exact position and character.

Trinity House concur with Captain Roberts, that station should be outside the bank, midway between Arklow and Tuskar. Two lights, one revolving, the other fixed; the revolving one 12 or 14 feet higher, but not on the same mast.

1859, June.—Trinity House propose to alter character to a single fixed bright light, to avoid possibility of mistake with Tuskar. Arklow to be a single quick revolving bright light, and Cardigan Bay a single quick revolving red light.

STATIONS IN CHANNEL ISLANDS.

1858.

Guernsey.

June.—Messrs. Harvey, Hayle, offering to moor and maintain a lightvessel on Herbert's plan for reasonable period, and if found not to answer, to build an iron lighthouse for 15,500*l*.

Acquainted that there is no intention of placing a lightvessel thereat.

XVI. Total income for lighthouses, floating lights, buoys and beacons, and total expenditure on maintenance of floating lights in each year since 1st January 1845:—

	Total Income.	Expenditure for Lightvessels.
1845	£319,325 19 9½	£24,251 19 3
1846	305,363 12 9	27,009 17 5
1847	333,142 5 5	33,211 5 11
1848	341,014 1 4	44,842 5 6
1849	323,429 9 8½	41,216 19 2
1850	271,507 19 84	50,249 12 7
1851	290,986 13 11	46,343 16 10
1852	286,961 18 8	31,430 18 10
1853	292,856 10 5	34,319 10 7
1854	236,172 19 6	36,241 15 4
1855	253,497 3 5	39,229 19 11
1856	304,648 11 9	37,810 4 7
1857	267,624 10 0	40,491 0 3
1858	255,122 13 3	38,235 16 8

Income.

For the years preceding 1855, the amounts stated are the total of light duties collected for English Lights. Subsequent years show the totals collected at English ports.

XVII. Considered by Board; referred to Mr. Faraday; tried at the Trinity House or at Blackwall, and, if desirable, at a station.

XVIII. Attached. See also Instructions to Agents sent with Lighthouses General Return.

XIX. Dates of all applications for power to place floating lights in new positions since 1st October 1853, with date of final approval, and in case of non-compliance, the reason given for any deviation from the application:—

1856.

Prince's Channel.

February.—Requesting sanction for expense of lightvessel therein.

February.—Board of Trade sanction.

1858.

Shambles.

December.—Requesting sanction for expense of lightvessel.

1859, January.—Board of Trade sanction, but consider one of the Portland lights might be put out.

1859.

Cardigan Bay.

March.—Requesting sanction for expense of lightvessel.

Board of Trade sanction; subsequently demur to period of revolution, "of which whole responsibility rests with Trinity House."

1860.

Yarne.

January.—Requesting sanction for expense of lightvessel.

Board of Trade request more detailed information as to position, &c.

February.—Sanction given.

XX. Answers to Questions of a general character in the Special Returns.—(See Circular IV. for the Questions to which the following are Replies).—

3. The Corporation of Trinity House of Deptford Strond, Trinity House, London, E.C.

5. As a general rule, whenever it appeared desirable to the Elder Brethren to exhibit a new light it was the practice of the Corporation (previous to October 1853) to ascertain the views of parties likely to be affected thereby, who then signified their willingness to pay the toll requisite for its maintenance by memorializing the Board to establish a light in the locality.

26. From sunseting to sunrise.

31. Lanterns round masts, suspended by lantern tyes, lamps gimbed and balanced.

36. In this sum are included the costs of the lanterns and apparatus, the moorings, and all fittings.

37. Ordinary repairs are usually effected at the station by local tradesmen. No lightvessel is kept in repair by periodical contract. Extraordinary repairs are generally done in London, the Newarp, Seven Stones, Bahama Bank, and others have been sometimes repaired at the out-ports.

39. The difference in the wages of the seamen arises from the fact of the men who have entered since October 1853 not being entitled to pensions for their widows, in lieu of which they have been required to insure their lives, by payment of 5*s*. per month, their wages being increased 2*s*. 6*d*. to assist them in so doing.

41. The master is allowed 1*s*. 6*d*. per man per day for victualling, according to scale annexed, and has to allow the men 1*s*. 3*d*. each per day when they are on shore.

42. The amount stated is that which the present moorings would cost complete at the prices of 1858, and includes both the moorings in use and the anchors and cables in reserve.

XX.

FLOATING LIGHTS.—GENERAL RETURN.

44. The sum stated includes glass cylinders, wear and tear, and cleaning stores consumed.

49. From revenues derivable from dues for lights, buoys, and beacons, paid into the Paymaster-General's Office to the account of the Mercantile Marine Fund; but the Admiralty, by an annual payment, uphold the "Warner."

51. The amount stated for 1852 differs from that shown in the Parliamentary Return for that year, as the latter included the cost of collection (now defrayed by the Custom House), and a proportion of the expense of the steam or sailing tender by which each light was served, &c. The whole sum disbursed on the lightvessels in each year is given. The expenditure varies according to damage sustained, general repairs undergone, or lapse of time since the last general repairs.

52, 53, 54. See Return in Lighthouses General Return, to 45, 46, 47, Lighthouses Special Returns.

63. By signals of guns and rockets. Each vessel is fitted with two carronades, and is also supplied with a buoy and coir hawser, for the purpose of veering to any boat in distress.

64. See day signal code sent with Lighthouses, see also answer to XVIII., Floating Lights, General Return, "Additional Instructions, &c."

The Gull lightvessel has a special signal for life boats.

65. Not considered necessary.

XX.

ENGLAND.
Circular II.

Scale of Victualling referred to at XX., 41.

Ordered,—That the under-mentioned rations, when afloat, and money in lieu thereof when on shore, be allowed to the crew of each lightvessel belonging to this Corporation, viz. :—

When afloat,		
Meat	-	10 lb. per week each man.
Bread	-	7 lb. ditto.
Flour	-	2 lb. ditto.
Peas	-	1 pint. ditto.
Potatoes	-	7 lb. ditto.
Suet	-	$\frac{1}{2}$ lb. ditto.
Tea	-	2 oz. ditto.
Sugar	-	$\frac{3}{4}$ lb. ditto.
Beer	-	3 gallons ditto.

When on shore, one shilling and threepence per day each man, in money, in lieu of provisions.

Ordered,—That a copy hereof be fixed up in the cabin and galley of each lightvessel.

Ordered also,—That no provisions whatever be removed from the vessel.

By order of the Board.

Trinity House, London,
1st January 1845.

CIRCULAR No. IV.—FLOATING LIGHTS.—SPECIAL RETURNS.

CORPORATION OF TRINITY HOUSE, LONDON.

The Lights are numbered to correspond with the Index Map.

1.

SPURN.

Off the Point at the Entrance of the Humber.

2. 10 fathoms; coarse sand; 4 knots.
 4. William Davie, Great Yarmouth.
 5. April 1819. Trade of Hull and ports on the north-east coast. See Floating Lights, General Return, 20.
 6. To mark the entrance to the Humber and clear adjacent shoals.
 7. Since 27th March 1820.
 8. One only.
 9. Length, extreme, 80 feet; breadth, 21 feet.
 10. Wood.
 11. 163 tons.
 12. Blackwall; William Pitcher.
 13. About 8 feet aft, 7 feet 4 inches forward.
 14. Red.
 15. A red ball at the masthead; name on the sides of the vessel.
 16. One mast 69 feet long; one lugsail; one staysail.
 17. Wire rod above the masthead connected by metal plates to chain rigging and copper bands down the sides to the water.
 18. Moored by 210 fathoms riding chain to a mushroom anchor ground tackle, two bower anchors, 135 fathoms chain.
 19. Patent proved short-linked chain $1\frac{1}{2}$ inch iron. Mushroom anchor, 32 cwt.; one bower anchor, 20 cwt., one ditto, 14 cwt.
 20. Brown, Lenox, and Co., Millwall.
 21. 38 feet.
 22. 6 $\frac{1}{2}$ miles.
 23. 10 miles.
 24. Revolving; bright.
 25. Once in two minutes, showing a flash every thirty seconds.
 26. See Floating Lights, General Return, 20.
 27. Catoptric. Argand lamps, burners $\frac{1}{2}$ of an inch, and parabolic reflectors of 12 inches diameter. Clockwork revolving machine.
 28. Four burners.
 29. None.
 30. William Wilkins and Company, London.
 31. See Floating Lights, General Return, 20.
 32. Gong.
 33. 19 days.
 34. 19 days.
 35. „100l. 3s.
 36. 4,297l. 0s. 3d.
 37. 7,1. 8s. No extraordinary expenditure.
 38. 11.
- | | £ | s. | d. | |
|-----------------|-----|----|----|---|
| 39. 1 master | - 5 | 0 | 0 | per mon.; 1 suit uniform: 20l. per ann. house rent. |
| 1 mate | - 4 | 0 | 0 | „ |

 51. 1852, 827l. 8s. 5d. 1858, 1,020l. 10s. 3d. See Floating Lights, General Return, 20.
 52. April 1857, Sub-Collector, Chichester, that coasting vessels from the westward object to pay dues for the Owers, although they are payable under the consolidated table. A rule of the table makes all creeks and places to be regarded as included in the name of the port to which they severally belong, except where specially mentioned. Under this regulation Chichester, when a creek of Portsmouth, was exempt from this charge; but when transferred by the Customs to Arundel (of which place it is now considered a creek), it became technically liable. Under the circumstances the Board ordered the collector not to charge it on vessels to the westward, and gave directions for the insertion of a note to that effect in the next edition of the tables.
 53. 54. Nil. See Floating Lights, General Return, 20.
 55. Nil.
 56. July 1857, notice having been given of the intended alteration of the Owers lightvessel three-quarters of a mile in a S.S.W. ¾ W. direction, Mr. Biddlecombe, R.N., Keyham, suggested still greater alterations, viz., that of placing the vessel about S. 55° W. true 2½ miles from previous anchorage on the line of the leading mark through the Swatch. Receipt acknowledged; not considered desirable to adopt the suggestion.
 57. Nil.
 58. Committees of the Elder Brethren and by officer in charge of the monthly reliefs.
 59. At the time of effecting the monthly reliefs.
 60. 61. No.
 62. Aneroid barometer, with thermometer attached, and three compasses.
 63. 64, 65. See Floating Lights, General Return, 20.
 66. Once a month. The master or mate and six men are always on board; the master or mate and three men are on shore in rotation. Relieved by sailing vessel.
 67. By sailing tender from East Cowes once a month.
 68. Yes, at Blackwall; as soon as she could be towed to the station.

* Since these returns were prepared the Trinity House have placed a Light Vessel to mark the Varue Shoal. First exhibited on the 1st October, 1860.

25.
CALSHOT.
Spit off Calshot Castle.

2. 3½ fathoms; mud; 1½ knots.
 4. Robert Willis, East Cowes.
 5. November 1825. Merchants and shipowners of Southampton and neighbourhood. See Floating Lights, General Return, 20.
 6. To guard the spit and to mark the entrance to Southampton Water.
 7. Since 16th May 1842.
 8. One only.
 9. Length, 67 feet; breadth, 18 feet.
 10. Wood.
 11. 100½ tons.
 12. Blackwall; Garrett and Westbrook.
 13. Forward, 6 feet 9 inches; aft, 7 feet 6 inches.

BUOYS AND BEACONS.

V.

h. See answer to "f." Chains and sinkers are not set apart for any particular buoy, but are kept suitable, and in sufficient quantity, for any casualty that may occur.

4 feet, nil ; 5 feet, one ; 6 feet, six ; 7 feet, 16 ; 8 feet 13.

j. 4 feet, nil ; 5 feet, run foul of by vessel ; 6 feet, five fouled, one cause not known ; 7 feet, five broke adrift, five fouled and sunk, five fouled and waterlogged, one chain broke ; 8 feet, seven fouled, three fouled and waterlogged, three broke adrift.

k. By single chain and sinker or mushroom, and, in several instances, with double moorings.

l. Varies according to extent of chain required, by nature of holding ground and character of water. The prices of buoy chains, &c., delivered in London, were, in 1859,—

1 1/2 in. (71 lbs. to the fathom)	-	20s. per cwt.
1 5/8 "	-	22s. "
1 3/4 " and 7/8 in.	-	23s. "
Cast-iron mushrooms	-	12s. 9d. "
Sinkers	-	9s. 6d. "

m. Chiefly procured of one firm, in London, Messrs. Shuter and Co., Shad Thames, at agreed prices. Chains and sinkers are supplied by Messrs. Lenox. The chains of lightvessels are also converted into buoy chains after three years' wear.

n. See details at "b" and "e." Names are also painted in large letters on the buoys.

o. See answer to "e."

ENGLAND.
Circular V.

XI. See Return to V. e.

XII. In buoying any single channels in future, the rule, where there are no special circumstances to require its modification, will be to place buoys of a single colour, either black or red, on the starboard side on entering from the sea, and party-coloured buoys, either black and white, or red and white, on the port hand, the outermost buoy on either hand being a beacon buoy, if necessary; middle dangers being marked by white buoys with black beacons, of various distinctive shapes.

XIII. No general principle applicable. Form and colour vary according to circumstances.

XIV. & XV. From revenues derivable from dues for lights, buoys, and beacons, paid into the Paymaster General's Office to the account of the Mercantile Marine Fund.

XVI. Total income Midsummer Quarter, 1852, 4579l. 14s. 5d.
Ditto ditto 1858, 3740l. 11s. 0d.
Total income for 1852 - 19,151l. 2s. 4½d.
Total expenditure, 1852 - 7,027l. 10s. 9d.
Ditto 1858, - 7,335l. 10s. 4d.

XVII.

DUDDON BAY.

October 1853.—Rev. A. Wilkin, directing attention to wrecks, owing to want of buoys.

October 1853.—Acquainted that, on requisition being forwarded from trade of neighbourhood, Corporation will entertain, and, if they approve, adopt suggestion.

GIER ROCK, PENZANCE.

March 1854.—Merchants and others memorialize for beacon.

March 1854.—Elder Brethren reiterate views of January 1853, that beacon is more especially useful for purposes of harbour, &c., and that Elder Brethren feel under necessity of declining to construct it.

PLATTER ROCKS, HOLYHEAD.

July 1854.—Admiralty request use of buoys at Holyhead for buoying the Platter Rocks.

July 1854.—Direction sent to Corporation's officer in compliance with their Lordships' wishes.

LIFE BUOY, HAISBERO' SAND.

April 1855.—Miss Gurney, Cromer, recommending one.

April 1855.—Acquainted that such buoys are not within province of Corporation, &c.

April 1855.—Board of Trade transmit proposal for one.

April 1855.—Acquainted that such buoys are not within province of Corporation, &c.

April 1855.—Captain Windham, R.N., requests assistance in placing one and taking charge of it.

April 1855.—Corporation will moor it, &c., but cannot replace in case of loss.

EAST SIDE OF HAPPISDURGH SAND.

May 1855.—Board of Trade transmit proposal from Captain Carter, Coast Guard, for a buoy.

August 1855.—Site examined; buoy not considered requisite.

TEN FEET BANK, BEAUMARIS.

June 1855.—Mr. O. Pritchard, Pilot, Liverpool, suggesting one on north-west spit.

July 1855.—Bank found to be without the borough limits in matters of navigation; buoy placed by Trinity House.

FAIRY ROCK, PORTHCAWL.

March 1856.—Commander Buchan, R.N., Harbour Master, that a buoy is wanted.

March 1856.—Elder Brethren have no objection, but advantage entirely confined to local navigation, not within Corporation's province to lay it.

SEVERN NAVIGATION.

August 1856.—Sub-Commissioners of Pilotage, Gloucester, that pilots desire more conspicuous leading mark through the "Shoots" than the tree on top of Redcliff; recommend white beacon.

September 1856.—Trinity House decline to incur expense, Conservancy of River Severn not being under jurisdiction.

DARTMOUTH BUOY.

October 1856.—Local authorities request assistance in buoying the Pier Rock.

October 1856.—Refused, pending question of future maintenance.

October 1856.—Local authorities request sanction to placing buoy at the pier.

October 1856.—Granted.

ENGLAND,
Circular V.

XVII.

November 1856.—Corporation found that buoy previously at the Cheekstone had been used for this purpose. Local authorities asked if they intend to leave that danger unmarked.
May 1857.—Reply that much smaller buoy will do for it, and promise to replace.

EEL POINT, CALDY, AND HIGH CLIFF, PATCH.

January 1857.—Board of Trade, transmitting enclosure from Commander Aldridge suggesting buoy at Northern extremity of ridge.
March and July 1857.—Surveyed; buoys placed.

HOLM SAND.

August 1857.—Collector, Lowestoft, that it has been represented that buoy should be placed on west part of Hook of Sand.
August 1857.—Placed and marked West Holm.

OUTER GREEN GROUNDS.

August 1857.—Swansea Harbour Commissioners for buoy on south-west end.
August 1857.—Buoy placed.

STONES BEACON.

March 1858.—In the course of the discussion relative to "Godrevy," Board of Trade suggest either beacon buoy or skeleton beacon on the Stones.
March 1858.—Trinity House concur, and propose one of Mr. Herbert's.

BEACONS ON MAPLIN; EAST SHOE BURY BUOY, &c.

September 1858.—Admiralty propose to mark a measured mile.
September 1858.—Trinity House see no objection if made distinctive.
October 1858.—Details from Admiralty.
October 1858.—Trinity House concur.

CARMARTHEN BUOYS.

April 1859.—Burry Navigation Company propose bell buoy on Cefn Sidon sands.
April 1859.—E. G. Thomas, Isoed, Kidwelly, proposes light vessel or bell buoy.

Trinity House have subject under consideration.
April 1860.—Navigation Company, that No. 1 buoy should be a bell buoy and placed one mile seaward of present position; that every buoy should be painted a different colour; and that one additional buoy should be placed between Nos. 1 and 2.

Visited by Elder Brethren. New beacon buoy will be placed and changes made in colour of existing ones about 1st August 1860.

MAEN PISCAR AND PENRHOS FYDDLIN, HOLYHEAD.

July 1859.—T. Hirste, Esq., transmitting memorial for a beacon and a buoy.

September 1859.—Visited, but not considered that any buoy or beacon could have availed to protect the vessels adverted to by the memorialists from the dangers in question.

CLIPERA ROCK, HOLYHEAD.

September 1859.—Board of Trade, with letter from Admiralty and memorial from Holyhead.

November 1859.—Trinity House have no objection to offer to bell buoy on Clipera and two other buoys. Board of Trade think expense of bell buoy may be borne by Mercantile Marine Fund, but that other two buoys if within limits of harbour should be placed by Admiralty.

BLACK ROCK, ISLE OF WIGHT.

September 1859.—Admiral Sir E. E. Hamond, Bart., advertising to present position of beacon, and suggesting white buoy at extremity of reef.

September 1859.—Acquainted that buoyage is under direction of Admiralty.

SIZEWELL BANK BUOY.

December 1859.—Board of Trade, with recommendation of receiver of wreck for bell buoy and much larger buoy than at present.

December 1859.—Trinity House do not consider bell buoy necessary to guard this shoal, the lead if properly attended to being a sufficient and infallible guide.

BUOYS AND BEACONS.

CHAPEL ROCK.

April 1860.—Mr. Harris of Hakin, proposing one, through Mr. Bailey.
April 1860.—Surveyed, not deemed advisable.

WOODBRIDGE BEACONS.

April 1859.—Mr. Johnstone, Agent, at suggestion of Masters and Pilots, that when impossible to enter Haven, one red light should be shown from beacons instead of two bright lights, and a black ball by day, so that ships may at once run for Harwich.

Approved.

Changes in the buoyage and beaconage at Liverpool and Hull have from time to time been made with the full concurrence of the Corporation.

STATIONS IN SCOTLAND.

BEACON ON STORNA, PENTLAND.

December 1854.—Northern Commissioners, proposing one.
January 1855.—Sanctioned.

BUOY OFF LOCH INCHARD, SUTHERLANDSHIRE.

BEACON ON BO COOLAS, LOCH INVER.

October 1855.—Northern Commissioners, proposing.
October 1855.—Sanctioned.

BEACON ON VASA, ORKNEY. BUOY OFF GRASSHOLM.

October 1855.—Northern Commissioners, proposing.
October 1855.—Sanctioned.

BEACON ON PABBA.

January 1857.—Northern Commissioners to Board of Trade relative to one.
January 1857.—Elder Brethren of opinion that spot should be well defined by substantial beacon, perhaps of less expensive character than that proposed (500*l*.)

CAIRN BULG BRIGGS.

1856.—Northern Commissioners propose beacon.
February 1857.—Sanctioned.

SOUND OF SKYE.

1857. Northern Commissioners propose beacon on the Goblack reef and buoys on the Gulnare and McMillan Rocks.
January 1857.—Grant sanction for buoys, information insufficient without personal inspection for sanction to beacon.

CALLEACH ROCK, KYLEARIN.

February 1857.—Northern Commissioners propose beacon.
March 1857.—Sanctioned.

SKERVOILE BEACON.

January 1857.—
Trinity House recommend more conspicuous colour.

CARRARA SOUND.

January 1857.
Trinity House recommend buoy on dangerous rock.

SCARGUN ROCK.

January 1858.—Northern Commissioners propose buoy.
January 1858.—Sanctioned.

BAY OF SALEM.

March 1858.—Northern Commissioners propose small buoy.
March 1858.—Trinity House consider that if bay is much frequented at night, buoy should not be less than eight feet.

TUISDALE.

May 1858.—Northern Commissioners propose beacon.
May 1858.—Sanctioned.

BURNT ISLES.

October 1858.—Northern Commissioners propose buoys.
October 1858.—Sanctioned.

LONG CRAIG ROCKS.

November 1858.—Northern Commissioners propose buoys.
December 1858.—Sanctioned.

XVII.

BUOYS AND BEACONS.

XVII.

ENGLAND.

SOUND OF APPIN.

February 1859.—Northern Commissioners propose beacon and buoy.
 March 1859.—Sanctioned.

SOUND OF HARRIS.

September 1859.—Northern Commissioners propose buoys.
 December 1859.—Sanctioned.

RIDDOCK SHOAL.

December 1859.—Northern Commissioners propose buoys.
 December 1859.—Sanctioned.

BLACK ROCKS, ISLAY.

December 1859.—Northern Commissioners suggest buoy instead of beacon as originally proposed.
 January 1860.—Concurred in.

LINNE LOCH.

March 1860.—Northern Commissioners propose four additional buoys.
 March 1860.—Trinity House have no objection, but would not be justified in recommending expense from Mercantile Marine Fund.

OBAN.

March 1860.—Northern Commissioners propose a buoy.
 March 1860.—Trinity House have no objection, but would not be justified in recommending expense from Mercantile Marine Fund.

BOGHA NUAGH.

March 1860.—Northern Commissioners propose a buoy.
 March 1860.—Trinity House do not consider buoy required, the dangers being near the shore and sufficiently marked.

(Board of Trade sanction this buoy.)

JURA SOUND.

March 1860.—Northern Commissioners propose three buoys.
 March 1860.—Trinity House do not consider buoy required, the dangers being near the shore and sufficiently marked.

STATIONS IN IRELAND.

KINSALE HARBOUR.

January 1854.—Irish Board propose beacon on Farmer Rock and two buoys.
 October 1854.—Sanctioned.

NORTH ROCK OF FEATHERS, COUNTY DOWN.

June 1854.—Irish Board propose beacon.
 August 1854.—Elder Brethren visit. Outer extremity of danger best site for beacon; but as a beacon on the North Rock will probably be sufficient for the only navigators who ought to use the channel, and is what they ask for, it is sanctioned. Suggestion made that lighthouse on South Rock and buoy should be coloured instead of white.

September 1854.—Irish Board concur, and ask for colour. Elder Brethren reply that it should be a bright red.

GWEEDORE HARBOUR.

July 1854.—Board of Trade inquire as to value of beacon, whether for general or only for local trade.
 August 1854.—Regarded as useful to shipping using harbour, but not to general navigation of the coast.

BAR ROCK, ARDS.

February 1855.—Board of Trade in relation to proposal from Irish Board, as to its being generally or only locally useful.

February 1855.—Trinity House request return of number of vessels using roadstead, and on receipt of reply are disposed to consider a perch would be beneficial to general trade.

SMITH'S ROCK, BALLYCATLIN ISLAND.

September 1855.—Board of Trade in relation to proposal from Irish Board.

September 1855.—Trinity House do not consider erection matter of great necessity, but are disposed to agree in opinion of Mr. Halpin that such a mark would occasionally be useful.

DUNDALK BAY.

October 1855.—Board of Trade forwarding suggestion from Irish Board proposing buoyage of Dunnany Reef and Castle Rock.

October 1855.—Concurred in.
 June 1857.—Board of Trade forwarding suggestions from Irish Board that buoy sanctioned for Castle Rock should be placed on Imogine Rock instead, and painted black, the buoy for Dunnany being red.

June 1857.—Concurred in.
 April 1858.—Irish Board propose change of position for the Imogine buoy.
 April 1858.—Concurred in.

RUSK BANK, CAHORE POINT.

April 1857.—Irish Board proposing buoy at either end.
 April 1857.—Concurred in.

KAY ROCK, VALENCIA.

April 1857.—Irish Board propose buoy.
 April 1857.—Trinity House not disposed to think it useful to "general shipping." Will inspect.
 June 1857.—Concurred in.

BULLOCKMORE ROCK, DONEGAL.

July 1857.—Irish Board propose buoy.
 July 1857.—Sanction, but suggest larger one.

CODLING BUOY.

January 1858.—Irish Board propose buoy.
 January 1858.—Sanction, but that mark should be an 8-foot spiral beacon buoy.

BUTTER PLADDY ROCK, STRANGFORD LOUGH.

February 1858.—Irish Board propose buoy.
 February 1858.—Sanction.

PLADDA LUG.

June 1858.—Irish Board propose beacon.
 July 1858.—Sanction.

ALDERMAN'S ROCK.

March 1859.—Irish Board propose beacon.
 March 1859.—Sanction.

BEERHAVEN.

February 1859.—Irish Board propose marks.
 March 1859.—Elder Brethren concur as to large beacon on Carrig a Vadra, on site of present pillar beacon, and buoy without beacon to mark outer edge of shoal.

Buoy to mark Carriglass patch.
 Board of Trade think greater portion of cost should be borne by Admiralty.

BLACK ROCK, GALWAY BAY.

May 1859.—Irish Board propose improvement in beacon.

May 1859.—Concurred. Board of Trade cannot allow charge on Mercantile Marine Fund.

LOUGH SWILLY.

July 1859.—Irish Board propose buoyage.
 August 1859.—Sanction. Suggest that one buoy on each side be chequered.

September 1859.—Board of Trade propose dark coloured buoys on one side, party coloured on the other, white with beacon for centre dangers.
 Trinity House concur.

ARKLOW BANK BUOYS.

October 1859.—Irish Board propose two.
 October 1859.—Elder Brethren inquire as to height out of water at which Mr. Stoney's 8-foot buoys float.
 October 1860.—Irish Board reply.

Elder Brethren concur as to marks, but think larger buoys should be used.

November 1859.—Board of Trade suggest that buoys should also mark Arklow Swath.

Trinity House concur.
 January 1860.—Irish Board, further as to form and colour.

NORTH BRIGGS ROCKS, BELFAST LOUGH.

November 1859.—Irish Board propose buoy.
 November 1859.—Trinity House inquire as to present perch.

ENGLAND.
Circular V.

XVII. to XXIV.

SPIT OF PASSAGE, WATERFORD.

December 1859.—Irish Board proposing beacon tower on Falskirt Rock.
December 1859.—Trinity House think it might be of service to passing trade.

HORSE SHOE CHANNEL, WICKLOW.

February 1860.—Irish Board propose buoy.
February 1860.—Concur.

STORKS ROCKS, ANTRIM.

March 1860.—Irish Board propose beacon.
March 1860.—Concur.

BLACK SOD BAY.

May 1860.—Irish Board propose buoys or perches.
May 1860.—Trinity House have no objection, but regard them as too local in character to justify recommendation to Board of Trade for charge on Mercantile Marine Fund.

STATIONS IN THE CHANNEL ISLANDS.

GRANDE ANQUETTE.

February 1858.—Board of Trade transmitting correspondence with Admiralty relative to establishment of beacon.

March 1858.—Concur as to expediency.

SUPPLEMENTARY.

BUOYS FOR THE BALTIC.

February 1855.—Admiralty request use of certain buoys for that service.

Trinity House suggest their construction in Woolwich yard, but will lend, if desired, and ultimately do so.

XVIII. The power to place buoys and beacons is vested in the Trinity House; but application for the necessary expenditure has to be made to the Board of Trade. See paper attached.

XIX. By every committee passing, and by local agents whenever afloat. Dates not specially recorded unless occasion arises.

XX. See answer to XIX.

XXI. "Notices to Mariners" freely distributed; advertisements in the newspapers.

XXII. The agent or sub-agent.

XXIII. Pilots and officers in charge of lightvessels are instructed to report, and every encouragement is given to other persons to do so.

XXIV. Dates of complaints or representations made or received by this authority since October 1, 1853, as to—

- a. Nil.
- b. Nil.
- c. Nil.
- d. Nil.
- e. Their colour:—

WISBEACH BUOYAGE.

July 1855.—Trinity House to Wisbeach authorities, that the buoy on Wisbeach Bar, now black, and not readily distinguished from that abreast of it on the Upper Roaring Middle, might be advantageously painted of a different colour.

July 1856.—Wisbeach authorities propose to alter colour of Wisbeach Bar and Outer Roaring Middle Buoys; the beacon buoy at the middle to be black, the bar buoy chequered white and black.

July 1856.—Trinity House see no objection, but due notice should be previously given.

YARMOUTH BUOYAGE.

May 1856.—J. Brady, alleging that certain buoys in the Yarmouth district are in bad condition.

May 1856.—Referred to Superintendent, who reports that what Mr. Brady considers nearly red is the rust from the ironwork; that it is, however, quite discernible from the beachmen's look-out; and that the periodical shifting of the buoys will take place on the first opportunity of weather.

MIXON BUOY.

August 1857.—Swansea Harbour Trust, that it should be painted black instead of white.
August 1857.—Complied with.

BUOYS AND BEACONS.

XXIV.

PUFFIN ISLAND BEACON, MENAI.

August 1858.—Colonel Williams, that it should be coloured white.

October 1858.—Trinity House concur. It was finally decided that the lower half should be black, the upper half and ball white.

f. Insufficient means of identification:—

DIAMOND AND CREASOR BEACONS, MOUNTS BAY.

September 1856.—Mr. Mathews, that they require painting.

October 1856.—Superintendent reports them to have been painted twice in the year: thinks Mr. Mathews has mistaken the pole on the Geir, erected by the town of Penzance.

MIXON BUOY.

August 1857.—Swansea Harbour Trust, that bell on Mixon is too small.

Improvements in bell buoys have been and are still under trial.

PUFFIN ISLAND BEACON, MENAI.

August 1858.—Colonel Williams, suggesting that apparatus light be thrown on it from the Menai.

An estimate for carrying out this suggestion has been obtained, but has been found too expensive for the advantage to be derived.

HOLM TAIL BUOY.—LOWESTOFT.

1859.—Board of Trade with Wreck Return. Master complaining of want of conspicuous buoy; concurred in by Wreck Receiver.

1859.—Buoy is of largest and most conspicuous description (except monster buoys). Wreck appears attributable to other causes.

BWBCH HEAD BEACON.

May 1859.—Lloyds, with suggestion from Mr. Price, Aberdovey, thereon. Transmitted also from Mr. Price, through the Superintendent.

Woodwork added in advance of the beacon, and the whole painted white instead of red.

g. Insufficient notice of accidents or changes:—

TELEGRAPH BUOYS, OFF DEAL.

June 1858.—Admiralty, with letter from Lord C. Paget, covering memorial from fishermen. &c., Deal, &c., complaining of telegraph buoys.

Inquiries to be made. Telegraph Company to be reminded that sanction should have been obtained.

Company explain that buoys have been placed to mark repairs, and will be removed on completion.

LAVERNOCK BEACON BUOY.

April 1860.—Board of Trade Wreck Return, representing defective state.

Reply.—That it was only reported to be waterlogged the day before, and was not entirely submerged; and that wreck could not have occurred if sailing directions had been attended to.

See letter "e," Wisbeach Buoyage.

See letter "m," Plough Seat Buoy and Beacon.

h. See part of answer to No. XIX., Lighthouses General Return.

i. See part of answer to No. XIX., Lighthouses General Return.

j. See part of answer to No. XIX., Lighthouses General Return.

k. Principle or system of buoyage, or

l. Its want of uniformity:—

March 1858.—Port of Dublin Corporation transmit proposal from Northern Commissioners for uniform system.

Elder Brethren do not think any positive or invariable rule can with safety be laid down; instance entrance of Thames, where buoys on port hand of one channel might be mistaken under various circumstances for those on same side of contiguous channel; and are doubtful whether red and black are sufficiently distinctive when buoys are oxidized and discoloured.

April 1858.—Trinity House to Northern Commissioners, upon their proposed general system of beacons and buoys, viz., on entering a port or harbour keep red buoys on the starboard hand, black buoys on the port hand, while chequered buoys mark central dangers.

That at entrance of many harbours the system may be very advantageous; but that there are many localities where it would not only be inapplicable, but might prove

XXIV.

BUOYS AND BEACONS.

dangerous, as at entrance of Thames, where there are three contiguous channels, &c.; and further, that colours black and red are not easily discriminated in thick or hazy weather unless paint is kept in more than ordinary degree of freshness.

April, 1858.—Board of Trade send copy of letter from Commander Bedford relative thereto.

Trinity House send Board of Trade copy of above letter to Northern Commissioners.

September, 1859.—Board of Trade, in sanctioning buoyage of Lough Swilly, suggest that in buoying channels for first time the buoys on starboard hand on entering should be either black or red, and on the port hand black and white and red and white; and that, if necessary to buoy a middle bank, the buoys at its ends should be white with a beacon.

Trinity House are disposed to concur; sanction this principle for Lough Swilly.

November, 1859.—Irish Board propose a system, viz., red on starboard, black on port, middle dangers chequered.

Trinity House reply, that wherever there are no special circumstances to require its modification, buoys of a single colour, either black or red, should be placed on the starboard side on entering from the sea, and parti-coloured buoys, either black and white or red and white, on the port hand; the outermost buoy on each hand being a beacon buoy if necessary, and that middle dangers should be marked by white buoys, with black beacons of various distinctive forms.

m. Delay in replacing:—

DARTMOUTH HARBOUR.

1846 to 1860.—In 1846 the Trinity House presented the authorities at Dartmouth with a set of buoys, which were placed on the Cheekstone, the Castle Ledge, and the Holm Stone, upon the understanding that the Local Authorities would take measures for their maintenance; but from time to time as the buoys broke adrift, the assistance of the Corporation was asked and given, until 1853 it was intimated to the town clerk that no further assistance would be rendered, and that they must take measures accordingly.

1855.—Correspondence ensued as to placing the buoys and the light under the Trinity House.

1856.—The buoy of the Cheekstone was transferred by the Harbour authorities to the Pin Rock, and a smaller buoy considered sufficient for the Cheekstone.

1857.—Mr. Willocks complained of the absence of the Cheekstone buoy, and the danger to his yacht in consequence, and the authorities promised to replace the buoy.

Since then the question of the Trinity House taking the buoyage and beaconage has been resumed, and it rests with the authorities at Dartmouth to consent to the toll which has been considered necessary for the cost and maintenance.

RUNDLESTONE BEACON.

1855, June.—Sub-commissioners at Penzance, that two wrecks have occurred, advert to the circumstance of the beacon not having been reinstated, offer some observations as to small service of present buoy, and suggest either new beacon or two additional buoys, to be so moored as, with the present buoy, to encircle the rock.

June, 1855.—Beacon buoy placed immediately; preparation of rock beacon forwarded.

POOLE BUOYAGE.

1856, March.—Board of Trade with wreck return, stating that the "Ranger" stranded in consequence of the disappearance of the small black buoy on the elbow of the Hook Sand.

Elder Brethren call attention of local authorities to 394 and 395 sections of Merchant Shipping Act, 1854, and rely on the buoys being replaced.

April.—Harbour Master, Poole, contradicts in express terms charge of inattention and neglect.

April.—Master of the "Ranger" encloses correspondence with local authorities as regards his claim for compensation.

April.—Acquainted that it is not within our province to decide any question of liability.

PLOUGH SEAT BUOY AND BEACON.

(Jurisdiction of Trinity House, Newcastle.)

1857, January.—Board of Trade with wreck return, advertising to absence of buoys and beacon.

Trinity House enquire of Trinity House, Newcastle, who allege difficulties of weather.

Elder Brethren reply, urging replacement, and explaining practice of giving immediate notice in such cases.

ENGLAND.

Circular V.

TUSKAR BEACON.

1858, July.—Board of Trade with report from Coast Guard, Swansea, that stranding of the "Economy" is attributed to defective state of Beacon.

Board of Trade informed of destruction by a vessel; that buoy was placed immediately, and measures taken for restoration; that completion has been unavoidably delayed, owing to the works at the Crow Rock, and will be effected in a few weeks.

SUPPLEMENTARY.

CARDIFF SANDS.

January, 1857.—Board of Trade with wreck return, attributing wreck to defective state of buoy on the spit of Cardiff Sands.

Telegram sent to agent, who replies that buoy is in good order and proper position. Board of Trade informed.

NORTH SCROBY BUOY.

November, 1853.—Said to be placed too far to northward by Mr. Tims, master of the "John."

Found to be in right place. Master informed.

INNER DOWSING.

November, 1853.—J. Harrison, master of the "Charger," that he struck the ground, the buoy bearing W. b. N. two miles.

Superintendent reports no such water; supposes master mistook buoy.

BRIDGWATER BUOYAGE.

December, 1853.—Misleading cask placed by fishermen. Removed upon requisition.

HOLM TAIL SAND.

1855.—Board of Trade with letter from master of "Content," relative to loss, and as to position of buoy. Report from superintendent that it is in right place.

WOLF ROCK BEACON.

October, 1856.—Reported by Master in the Navy under examination, to have disappeared.

District agent reports it all right.

PAKEFIELD GATT.

August, 1853.—Messrs. Gowing, Sons, and Rounce suggest changes in buoyage of Pakefield Gatt.

Reply that channel will be surveyed, and changes made if necessary.

MIDDLE BUOY OF THE HEAPS.

April, 1860.—Board of Trade wreck return, representing that the East buoy is not far enough to the eastward.

Found to be in its place.

See also, generally, Answers to Questions XVII. and XXV.

XXV.

"If any buoys or beacons differing materially from those commonly used have been tried by this authority, or if any important improvements or alterations have been suggested to or made by it with regard to the shape or principle of buoys or beacons in any particular, give full information on the subject, and describe the course adopted for ascertaining the value of such suggestions."

BUOYS.

Form, Material, &c.

1845.—The attention of the Corporation was given about this time to the use of iron in the construction of buoys. One or two were made by Messrs. Ditchburn and Marc, and the manufacture was taken up by Messrs. Brown, Lenox and Co. in a special manner.

November.—G. W. Lenox, Billiter Square. Models of buoys constructed for beacon buoys floating with conical ends uppermost, pear shaped buoys, and with platforms making them suitable for refuge buoys. Has also been constructing an 8 feet iron buoy,—a barrel buoy.

1846, January.—Models to be tried in the water, the 8 feet iron buoy when completed to be moored for trial in an exposed situation. Mr. Lenox to send estimate for constructing a 20 feet iron buoy.

June.—The 8 feet iron buoy sent to Blackwall. One 20 ft. buoy ordered.

ENGLAND.
Circular V.
XXV.

XXV

BUOYS AND BEACONS.

XXV.

August.—A 6 feet beacon buoy, flush rivetted, and an 8 feet ditto, flush rivetted on the head, and snap rivetted on the side, sent to Blackwall for inspection, and adopted.

November.—Three large iron buoys, 20 feet by 10 feet, ordered to be made.

1848, September.—G. W. Lenox, Billiter Square, sends plans for self-ballasting iron buoys by the admission of water.

September.—Adopted.

November.—Board order another 17 feet iron buoy like model, to be experimentally made by Mr. Lenox, and that further trial of water ballast be made by altering the first of the 20 feet buoys that may require repair.

1850, October. Attention of the Corporation called to the fact that their water-ballasted buoys are an infringement of the patent of Mr. Wakefield Pim. Found on inquiry to be the case. 116*l.* paid to Mr. Pim.

1851, January.—License taken for future use.

December.—Mr. Pim's interest in patent was offered to Corporation for 250*l.*, but was declined.

1852.—A patent buoy on Mr. George Herbert's principle, placed experimentally by Mr. Lenox.

1852, November.—Board consider that as regards buoys best adapted for beacon buoys, this buoy far surpasses any other in stability afloat, distinctness of appearance, and convenience of stowage.

1855, May.—Hydrographer, Admiralty, transmits report from Captain Otter, R.N., of H. M. S. "Alban," in relation to appearance of certain buoys in the E. Swin, viz., that he can confidently testify to superiority of that on Herbert's principle in riding, over any of the buoys which the "Alban" passed. (15 of these buoys are at present in position.)

1856, January.—G. W. Lenox proposes to adapt existing wooden buoys to Herbert's patent, by iron base with gangway or parapet, making them safety buoys. Adverts to signals by means of various figures diversely painted on staff, and thinks a light might be exhibited from body of these buoys.

Not adopted.

1858, February.—G. W. Lenox submits buoys of new construction, flat-bottomed, with ring recessed, to which he will be able to fit bell apparatus. (See drawing herewith.)

Form adopted. (Five of these buoys are at present in position.)

1847, March.—J. Poulter, Superintendent, Buoy Wharf, Blackwall. Adverts to buoy with internal heads in lieu of external iron hoops, in use for 14 years, which keeps its colour as painted; submits that new buoys may be made on same plan.

Board concur, and give directions accordingly.

1848, January.—J. Poulter. Submits models showing an improved mode of constructing the large iron buoys, by dividing into compartments with internal heads and with external hoops for fenders.

Adopted.

1849, November.—J. Poulter proposes a mast buoy; not likely to be damaged if fouled, but that will rise freely on the other side of a ship's bottom.

Placed at Aldbro' Knapes, and at Stein Rock, Heligoland.

1852, October.—J. Poulter. Recommends adoption of 8 feet instead of 6 feet vertical buoys for beacons.

Directions given that no more 6 feet vertical buoys shall be fitted with beacons, except under special circumstances.

1853, March.—J. Poulter. Suggests the advantage which would result from the formation of water-tight bulkheads in the centre of wooden buoys.

Adopted.

November.—J. Poulter. Submits model of beacon buoy nearly without hoops, but with a solid wooden bottom, and more base than usual. In June, 1856, Mr. Poulter submitted a similar buoy, but of stronger construction.

Approved. 18 buoys of this character (the convex bottomed buoy) in position.

1854, April.—J. Poulter. Suggests a method for strengthening the heads of the 8 feet vertical buoys.

Approved.

1845, June.—Lient. Rodger, R.N., Chelsea. A beacon buoy and a series of distinguishing figures, so that one hundred and nineteen buoys may be differently marked by various combinations of eleven symbols.

July.—Attended and exhibited at Blackwall.

1848, June.—J. Kingsley, Dublin. Is constructing buoys for indicating shallows, &c., inquires as to mode of addressing Board, and as to practice in event of inventions being adopted.

Acquainted that if he will forward a description, it shall be brought under notice of Board.

November.—By order of Board. Beacon buoys (Can buoys) to be loaded at the nozzle instead of at the bilge.

1849.—Gutta Percha Company. Calling attention to that material for buoys.

1850. In 1850 a 20 feet buoy was constructed of gutta percha by Messrs. Bonney, of Knightsbridge. The cost of it, including shackle, was 200*l.*, arising partly from its being a first attempt. This buoy was soon damaged, and in 1852 was finally condemned.

1850.—Geo. Peacock. A new kind of mark buoy.

1850. Attended and exhibited model.

1852.—Geo. Peacock. Submits printed notice of a buoy laid off Calshot.

Inspected by committee, and found dangerous as refuge, two men being nearly drowned in the experiment.

1853.—Geo. Peacock. Submits model of refuge beacon buoy, and suggests that one should be placed at Chalk Roads, Needles.

Informed that position in which he proposes to place it, is within jurisdiction of the Admiralty.

1854.—Geo. Peacock. That Admiralty have placed one of his buoys on the Shingles, and adverting to causes of imperfect action in buoy inspected by Elder Brethren in 1852.

1852.—W. R. Merry, Whitechapel. Model of safety buoy. Tbanked for opportunity of inspection.

1852, October.—T. C. Clarkson, Gough Square. A patent cork material which he considers may be suitably applied in the manufacture of buoys.

A sample buoy supplied and placed at the E. River Middle Station. This buoy was received in April, 1853, and sent to station; it was condemned as unfit for service, and broken up in January, 1854.

1853, February.—Redpath and Leigh. To manufacture buoys with a patent preparation of iron that will resist action of sea water, and prevent oxidation and the accumulation of any marine, animal, or vegetable matter.

Board order a small buoy to be procured so prepared.

1855.—Messrs. Young, Son, and Magnay. To construct wooden buoys on Mr. George Herbert's principle.

One ordered.

1858, December.—B. B. Stoney, Ballast Office, Dublin. A patent keel buoy. (See drawing herewith.)

Informed that in conformity with practice in similar cases we are prepared to cause it to be tried, should he desire it, at his own expense.

1859.—Replies that he is not in a position to do this, and that the buoy has already been proved successful by the Irish Board. Irish Board transmit report on it from their marine surveyor.

May.—A 9 feet buoy ordered and placed at the E. Margate Station.

1860.—Captain Nisbet, E.B. A mast buoy of peculiar construction. (See drawing herewith.)

Ordered to be tried.

Bell Buoys, &c.

1845, January.—A. Perry, Swansea. Bell buoys for facilitating steam navigation in fogs, each bell to have a different note, the sharpest toned bell nearest the harbour, the deepest toned bell farthest from it. If suggestion be considered worthy of reward, will be obliged by a remittance.

Acquainted that his communication has been laid before the Board.

1846, June.—W. Lodge, Swansea. A bell buoy instead of a beacon buoy off Breaksea Point.

Acquainted that such beacons have been regarded by the Elder Brethren as inefficient, and rather calculated, by producing improper reliance on varying and uncertain sounds, to lead into than to warn from danger.

1848, May.—Admiral Owen, Captain Shortland, R.N. and Mr. Hutchinson. Machine invented by Mr. Hutchinson for producing sound on buoys.

Attended and submitted.

1848, May.—N. D. Maillard, Edward Street, Portland Place. A bell buoy with continuous sound. Will supply fog buoy 8 feet with 2 feet diameter bell, for 35*l.*

Requests leave to submit invention for employment of continuous sound in floating and stationary beacons.

1848, May.—Proposal accepted as regards fog buoy.

August.—Delivers it at Blackwall, moors it at Ramsgate, finds engineering defect in moorings.

September.—Alters it, reports it ready. Appointment made with him at Ramsgate, which he is prevented from keeping. Requests that it may be again tried in water. Directions given to attend to Mr. Maillard's wishes in this respect whenever he may choose to go to Ramsgate. Mr. Maillard so informed.

1848, June.—Admiralty. Inquire as to Mr. Field's invention for employment of continuous sound in buoys and beacons.

XXV.

BUOYS AND BEACONS.

XXV.

ENGLAND.
Circular V.
Question
XXV.

1848, June.—Acquainted that the name of Mr. B. Field is unknown to this Board in connection with this subject.

1850, September.—N. Parsey, Oxford Street. Apparatus for striking a bell by means of a water-wheel, which he regards as adapted for an alarm and signal buoy.

Attended and exhibited model.

1844, February.—A. B., Ramsgate. A floating fence or barricade to encompass each end of the Goodwin Sands. Iron vessels 100 feet long and 20 feet wide, with mast and red ball enclosing large bell. Each vessel to have a separate strong mooring, and be secured at each end to next vessel with strong coupling chains like railway carriages.

1855, April.—Miss C. E. Blackburn, Exeter. An alarm beacon (the invention of her late father), a substitute in many cases for lightvessels. (This proposition was made by her father in 1844, but he declined to explain it without an arrangement as to remuneration.)

1855, August.—Application on her behalf that papers may be returned if not approved. Papers returned.

1855, November.—Mr. G. W. Lenox. Tender for an iron bell buoy with 4 feet bell, and dome for bell. (The buoy one of Herbert's patent.)

Accepted, placed at the Mixon, result not equal to expectation.

1857, February.—J. Boyce, Drogheda. Floating fog whistles rising from a gutta-percha pipe five miles long at every 100 yards, blown by a man on shore with a pair of blacksmith's bellows. If put into operation requests leave to blow the first pair of bellows.

Read.

1857, March.—Geo. Chowen, James Street, Covent Garden. To encircle Goodwin Sands with double row of bell buoys.

Acknowledged, plan to lie on table for inspection.

1857, September.—Captain Close, E.B. Suggestion for method of sounding bell on buoy by means of floats.

Approved. Mr. Lenox's offer to fit the apparatus to one of the present buoys accepted.

There was a mistake in the fitting of this buoy, which is now being rectified.

1858, January.—Lieutenant Morrison, R.N. Proposing bell buoys for Goodwin and other Sands.

Acquainted that the same has been laid before the Board.

1858, July.—Mr. Whettam. Plan for adapting a bell to a buoy so that it shall ring on the slightest motion.

Not adopted.

1859, January.—Mr. G. W. Lenox. A patent tidal bell buoy, worked by an internal wheel. (See drawing.)

Tried near the Maplin, but found inefficient.

1860.—Captain Close, E.B. A new bell buoy. (Drawing herewith.)

At present under consideration.

Illumination of Buoys.

1847, October.—E. and J. Brown, Preston, Lancashire. Are in possession of a method. (Voltaic light.)

1847, October. Permission given to attend and explain it. Arrangement made that Board will bear cost of apparatus if not exceeding 20*l*.

1847, November. Messrs. Brown attend and exhibit voltaic light.—Apparatus referred to Professor Faraday. Mr. Faraday reports that principle is unapplied to buoys. Messrs. Brown informed; letter from them in reply.

1848, January. Acquainted that Board do not consider they have practically demonstrated application, but that they may draw for 20*l*.

1848, February. Messrs. Brown inquire further as to our decision. Board reiterate opinion that they have totally failed.

1848, March. Messrs. Brown remonstrate. Offer to place project in our hands for just remuneration.

Board refer them to previous letters.

1849, July.—E. Brown. Hears we are going to make another attempt to light Goodwin Sands; again offers method of illuminating buoys.

Acquainted that he is entirely mistaken in supposing we have any present intention in regard thereto.

1850, September.—W. W. Bonney, Fulham. A method of producing and sustaining for a longer period than hitherto a most powerful electric light for use in the globes of buoys; will prepare model, provided we will defray expense, &c.

Acquainted that Elder Brethren decline to accede to his proposition.

1850, November.—Bolton Bolton, Chelsea. For lighting up the British Channel and Goodwin Sands with lines of floating gas lamps. (Prospectus herewith.)

1850, December. Acquainted that proposition has been considered by Board, and that we are not disposed to entertain it.

1851, November.—C. Babbage, F.R.S., Dorset Square. A method of illuminating buoys by filling them with gaseous liquids burning without wicks, or by agency of metal rod heated in flame, lighted and put out by mechanism, or left constantly burning. New forms of buoys required, probably columnar, weighted at bottom, and attached to moorings by rings fixed at centre of resistance.

These suggestions were not adopted.

1856, April.—J. W., Post Office, Sunderland. Has a plan for lighting buoys which may be seen in the darkest night. For further particulars address him.

1856, April. Read.

BEACONS.

Dr. Potts.—Proposal for driving piles by atmospheric pressure, as per circular.

The first communication from Dr. Potts was made in July, 1844, and a trial was made at the Blyth Sand in September of that year. The result was so far encouraging as to justify subsequent proceedings.

1845, February. Dr. Potts offers the use of his patent for 1,000*l*.

1845, March. Board offer him an annuity of 100*l*. per annum, subject to six months' notice of discontinuance of use, to which he agrees.

1846, August. Dr. Potts offers to superintend work for Corporation at rate of one guinea per diem for any term exceeding a week, and at rate of one guinea and a half per diem for any term less than a week; coals being supplied by the Trinity Board for his vessel, the Fly, when in use.

This proposal was not accepted.

1847, March. Dr. Potts states that he has made considerable improvements in working his patent.

Admiralty inquire as to value of principle.

1847, September. Admiralty informed of what has been done with it.

1847, October. Information sent to Lieutenant-Colonel Colquhoun, R.A., and other officers forming the Committee for inquiring into constructions on Sands.

Ordnance Office applies for use of lighter, which was lent.

1847, November. Irish Board inquire. Information sent.

1849. Lieutenant-Colonel Abbott, C.B. requests us to point out site suitable for experiment before applying system to works in India. Board suggest Yarmouth. Superintendence there directed to afford information.

1852. Notice given to executors of late Dr. Potts that use of patent will be discontinued.

Dr. Potts's principle has been applied in the construction of the following works:—

A cylinder of three feet diameter driven into the Goodwin Sands.

(This penetrated 79 feet, and rested on the chalk. It is the only beacon on the Goodwin which has maintained its position, and is very valuable both as a sea-mark and a refuge beacon.)

A beacon at South-east Hook of Margate Sand.

A beacon at east-end of Blyth Sand.

A beacon on Buxey Sand off coast of Essex.

A beacon at South Girdler, and one at the Shingles, Prince's Channel.

A beacon at the South Calliper of the Goodwin.

The causeway from the shore to the Mucking lighthouse, 460 feet in length, rests upon piles driven by this process.

1845, July.—Messrs. A. Mitchell and Son, Belfast. Request renewed attention to their screw piles. Offer to provide and fix beacons, where depth of water does not exceed, three fathoms at low water, for 500*l*.

1846, October.—Messrs. A. Mitchell and Son propose to erect upon a single screw pile a beacon possessing the advantages that a vessel running against it would not receive injury whilst the spar, if broken, could be renewed immediately at a trifling expense. Will undertake erection of such beacons for 170*l*. each, including all attendant expenses.

1847, August. Board of Ordnance inquire as to successful application of Messrs. Mitchell's plan.

Informed that it has been used for foundations of lighthouse on the Maplin, and for beacon on the Tongue; and that we have no reason to doubt capacity of piles to bear weights of magnitude, unless from shifting of sand, which occurred to some extent at Maplin, although remedied effectually by artificial means. (The beacon at the Tongue was subsequently injured and removed.)

The Chapman lighthouse is also built upon Mitchell's screw piles.

1847, October.—J. Lewis, Borough. Has a plan for a beacon on the Goodwin. A circular ring of cast iron with half-anchors at every five feet, sunk six feet in the Sand, connected by rods leading inwards with a smaller and rim,

ENGLAND.
Circular V.
Question
XXV.

XXV.

BUOYS AND BEACONS.

XXV., XXVI.

similar rods from the upper rim to act as stays to a central shaft.

1847, November. May submit it in any way he thinks proper. Does so by letter.

Acquainted that it has been laid before the Board; but that the Corporation has not any present intention of erecting an additional beacon on the Goodwin.

1848, January.—J. Murray, Ph. Dr., Hull. Foundation on Goodwin. A series of hollow cylinders of galvanized iron with another hollow cylinder to form the centre. This to constitute the necessary framework of the caisson; the sand to be removed from the cylinders by Fauvell's principle or other simple means, and muriatic or hydrochloric acid lowered in cases to perforate the rock below; the newly-formed muriate of lime to be brought up by the same cylinder; bolts to be lowered and soldered into solid rock.

Thanked for communication. Informed that Corporation has not any present intention of taking measures for the formation of a foundation for a permanent erection on those Sands.

1848.—Malins and Rawlinson. To galvanize iron used for beacons.

Informed that Corporation do not require use of their patent.

1850, April.—J. Steward, Tunbridge Wells. Renewing proposal for his ponderous-footed beacon for sand banks.

1850, May. Acquainted that the Elder Brethren are not disposed to make trial of beacons constructed in the manner described.

1851, April.—M. Chevalier, Jersey. Submits model of a mast-beacon for half-tide rocks adopted at St. Helier's.

1851, July. This beacon was inspected by committee, but was not adopted.

1858, February.—S. Belin, Plymouth. That buoys and beacons should be inscribed with texts from Scripture.

XXVI. See Instructions to agents in General Lighthouse return. Attached.

A RETURN enumerating the SUBJECTS of CORRESPONDENCE, since 1853, with the BOARD of TRADE, in which Requests, Suggestions, or Remonstrances have been made to them on Subjects which the Elder Brethren have considered of Importance to the Interests in their charge, but on which the Views enforced by them have not met with the Concurrence of their Lordships, and specifying the first and last Dates of the Correspondence in each Case.
To be included in Answer to Questions No. XIX. in General Lighthouse Return, XX. in General Floating Lights Return, and XXVII. in Buoys and Beacons Return, as per letter from the Secretary to the Commissioners, dated 11th June 1859.

Subjects.	Views of the Trinity House.	Views of the Board of Trade.	First and Last Dates of Correspondence.	
An additional clerk in the collection account office.	That one should be appointed if their Lordships desire that revenue for each light should continue to be ascertained.	That they can only sanction temporary assistance pending settlement of the establishment question.	1854. 17th Feb.	1854. 22nd Feb.
Collection of light dues.	That accounts should continue to be kept, so that amounts collected for either English, Scotch, or Irish lighthouses should be known.	Think that the want of it will not be attended with inconvenience, considering that if at any time required, it may be attained without difficulty, pro hac vice.	15th Nov.	20th Nov.
Official establishment.	The hope that if any distinct case of injury arises from the application of the new scale of pay to clerks appointed before October 1853, upon their promotion, their Lordships will be pleased to give it favourable consideration. (A memorial from a member of the official establishment was transmitted with the letter.)	Do not find in memorial any sufficient ground for altering the scale of salaries as fixed by Order in Council.	1855. 1st March	1855. 6th March
Liverpool collectors	That the salary agreed on for the remuneration of Mr. Hurry should take date from 1st April 1854.	Cannot consent to alter completed arrangements, which, in their opinion, are fair and liberal.	8th Aug.	14th Aug.
Portland dwellings -	Plans for new dwellings, &c.	Modified and reduced by request of Board of Trade.	9th Aug.	12th Aug.
Subscription to London hospital.	The continuance of the customary annual subscription of 105 <i>l.</i> , to enable the corporation to obtain medical and surgical advice to numerous persons in lighthouse, steam and sailing vessels and ballastage services.	£52. 10 <i>s.</i> ultimately sanctioned	31st Aug.	1856. 24th May
Superannuations -	To increase the pension of Benjamin Richards from 7 <i>l.</i> 1 <i>s.</i> to 11 <i>l.</i> 15 <i>s.</i> , in consideration of his mutilation and utter helplessness by loss of hands owing to explosion of a gun.	Regret inability to comply, have no power to authorize higher rate than that already granted.	20th Sept.	1855. 28th Sept.
Collection at the Motherbank.	To make an allowance for boat hire to the collector in addition to his commission.	Think allowance for boat hire objectionable, and that the commission of 10 per cent. will be sufficient for the first year.	3rd Oct.	1856. 14th Feb.
New steam vessel "Argus."	Specification prepared by Trinity House. Trinity House propose that Messrs. Samuda's tender should be accepted, although slightly in excess of another (10,100 <i>l.</i> in six months complete, against 9,887 <i>l.</i> in six or seven months ready for engines), because time is of importance, and the vessel is to be substantially the same as the one recently built by Messrs. Samuda, and the design submitted by them is preferable to that submitted by the other competitor.	Modified by Board of Trade as regards bulk heads and fittings. That as competition was confined to a limited number, it is presumed those only were selected who are considered competent to perform the work. Require that lowest tender should be accepted.	1855. 18th Oct. 1856. 9th May	1856. 31st March 2nd June
Steam vessel service	To increase the salary of the master of the "Irene" 20 <i>l.</i>	Consider remuneration fully adequate, but unwilling to oppose recommendation so strongly pressed, sanction two annual increments of 10 <i>l.</i> each.	1855. 18th Oct.	1855. 3rd Nov.
Liverpool collectors	That Mr. Hurry's retiring allowance be 276 <i>l.</i> 18 <i>s.</i> 2 <i>d.</i>	Grant 225 <i>l.</i> - - - -	14th Nov.	18th Dec.
Salary of agent at the Ferns.	To increase it 10 <i>l.</i> per annum in consideration of enhanced price of provisions, and of his salary being comparatively less than that of other local agents.	That as present salary has been sufficient, and no new duties have been imposed, they are not prepared to sanction increase.	1856. 6th Feb.	1856. 19th Feb.

ENGLAND.
Circular II.

RETURN of the SUBJECTS of CORRESPONDENCE with the BOARD OF TRADE, &c.—continued.

Subjects.	Views of the Trinity House.	Views of the Board of Trade.	First and Last Dates of Correspondence.	
Lundy lighting apparatus.	To accept Messrs. Wilkins' estimate for French apparatus in consideration of arrangement being novel in this country.	Consider supply of these works should not as heretofore be limited to a single manufacturer.	1856. 10th March	1856. 19th May
Compensation to builders invited to tender for Smalls and Needles.	It having been determined not to build by contract, propose 105 <i>l.</i> each to lowest tenders, and 500 <i>l.</i> to the person employed by the contractors generally to take out quantities, as a matter of justice to contractors, and as expedient in case we desire their competition for other works.	Sanction 382 <i>l.</i> 10 <i>s.</i> for quantities, nothing for lowest tenders, considering that if other tenders had been accepted the expenses would have fallen on those now proposed to be reimbursed.	30th April	17th Sept.
Superannuations -	That Mr. James Hall, surveyor of shipping, aged 82, having served 22 years, should be allowed $\frac{4}{12}$ ths of his salary for 17 years, and $\frac{1}{12}$ th for the five years.	Regret that it is not in their power under terms of Superannuation Act.	3rd July	11th July
Skerries light establishment.	To class it as a rock station, so as to give intervals of relief and freedom from duty, having regard to desolate position, destruction of gardens, and death of wife of keeper.	First suggest consolidation with neighbouring establishments, and ultimately, do not feel justified in sanctioning proposal to make it a rock station, but will not object to small increase of pay to existing keepers.	2nd Aug.	6th Nov.
Whitby Pier light -	To undertake the permanent exhibition of the light on the West Pier, until the lights at High Whitby are completed, for the purpose of indicating the danger known as the Whitby Rock.	It does not appear to them that there is so urgent a necessity shown for that step as to justify an expenditure of public money, upon what is really a harbour light.	28th Feb.	19th March
Superannuations -	Mr. Boyns, the agent at the Longships, was pensioned after 32 years service, on $\frac{4}{12}$ ths of his salary, but it was found convenient to retain his supervision three years longer, by which time he had become entitled to another 12th; proposed to give him this, making his pension 27 <i>l.</i> instead of 24 <i>l.</i> , as originally granted.	Sanction 25 <i>l.</i> , following the rule which the Treasury apply in dealing with the Civil Service.	1857. 13th May	1857. 18th May
Superannuations -	To grant Mr. Rutherford a pension in conformity with practice.	Propose Treasury abatements, ultimately consent to larger amount, subject to reconsideration of inability at end of three years. This reservation concurred in by Trinity House.	15th July	21st Oct.
Superannuations -	A pension was granted to William Lloyd for one year, subject to reconsideration; at end of that time, it was proposed to make it permanent.	Are unwilling to admit so young a man (aged 39) to a permanent pension, but have sanctioned its continuance for three years.	24th Sept.	5th Oct.
Engineer's remuneration. (Mr. James Walker.)	That in addition to annual salary, 157 <i>l.</i> 10 <i>s.</i> should be allowed him for an accountant, specially in consideration of accounts for works not under contract.	Consider salary should include all duties required to be performed by him.	1857. 23rd Nov.	1858. 2nd Feb.
Seilly district agency	Proposal to allow agent 10 <i>l.</i> per annum on account of appropriating a room in his own house for official purposes.	Do not see any ground; presume business is conducted in his house, and are not aware of any similar charges elsewhere.	28th Nov.	1857. 5th Dec.
Lowestoft and Portland Infirmaries.	Grant of 5 <i>l.</i> annually to each in consideration of medical and surgical advice to lightsmen, &c.	That it does not appear to them that the cases which may be considered as specially incidental to the Service are sufficiently numerous to justify a grant from the "Mercantile Marine Fund."	31st Dec.	1858. 20th Feb.
Anquette Beacon, Jersey.	Propose a design by Mr. Walker, submitted to the States in 1851, with additions.	Require it to be made smaller and less expensive.	1858. 26th Feb.	5th Dec.
Compensations -	That Mr. Simpson and others similarly circumstanced (<i>i.e.</i> , pension agents superseded by transfer of duty to War Department.) should receive compensation.	In the case of Collectors of Customs similarly situated compensation has been refused on the ground that services performed were of an occasional kind, for which a commission or per centage was from time to time received, and that their receipts were annually decreasing, and would in the course of a very few years entirely cease.	18th June.	1859. 19th Feb.

Subjects.	Views of the Trinity House.	Views of the Board of Trade.	First and Last Dates of Correspondence.	
Yarmouth and Plymouth agencies.	To make allowances of 5 <i>l.</i> to agents in consideration of their not being provided with offices as in other districts, and being compelled to rent larger houses.	Object to allowances; are willing to reconsider salaries.	1858. 19th June	1859. 18th June.
Bishop Rock Light -	That there should not be any toll, in consideration of its having been commenced before the passing of the "Merchant Shipping Act, 1854," and of the trade not having invited its erection nor pledged themselves to contribute, the work having been regarded as an adjunct to the Scilly light, the tolls for which are sufficient to maintain both.	Consider principle now acted on to be that a toll should be imposed for every new lighthouse, and that if the aggregate sum collected for light duties amounts to more than is required for the erection and maintenance of lighthouses generally, the surplus should be dealt with by reducing the tolls generally, rather than by making any special exemption in the case of any particular light.	28th July	31st March.
Hurst light establishment.	To assist the ministrations of a clergyman at Hurst Castle, by payment of 10 <i>s.</i> per service in consideration of advantage to lightkeepers and families, who are three miles and a half distant from the church.	Do not consider it within their power under terms of Act.	16th Sept.	1858. 24th Sept.
Superannuations -	To grant Arthur Watson, an assistant keeper, the minimum pension of a principal (18 <i>l.</i> 11 <i>s.</i> 5 <i>d.</i>) instead of 15 <i>l.</i> , Mr. Watson having been a principal keeper for ten years, to which rank he would have been restored but for his blindness.	That they have no power under the Act.	1859. 11th Feb.	1859. 23rd Feb.
Dartmouth Beacon -	Propose design by Mr. Walker -	Require it to be less costly - -	22nd Feb.	29th July.
Lizard light establishment.	To sanction payment of 3 <i>l.</i> 3 <i>s.</i> for use of pew in church, attended by lightkeepers and families (nineteen in number).	Do not consider they have the power -	23rd March.	29th March.
Solicitor's remuneration (Mr. Symes)	To pay bills for 1858, without subjecting them to the taxation proposed by Solicitor to Customs, and to remunerate for the future by a salary of 300 <i>l.</i> per annum, based on the average of recent years.	That exceptional items in accounts for recent years produced a higher average than would be advantageous to recognize, and that they have no power to overrule taxation.	12th April.	26th April.
Iron lightvessels -	To accept the tender of a London firm, although not the lowest (3,959 <i>l.</i> against 3,750 <i>l.</i>) on account of the admitted superiority of workmanship in the Thames, and the great advantage resulting from these vessels being constructed under the direct personal supervision of the Elder Brethren and their own surveyor.	That as tenders were made by parties invited and not by public competition, they consider the lowest should be accepted.	1859. 10th June.	1859. 23rd June.
Estate at Nayland -	Expenditure for wharf, superintendent's dwelling, buoy store, &c.	Sanction expenditure, but suggest that deduction should be made from salary of superintendent on his taking possession of the house.	1859. 7th Nov.	1860. 11th Jan.
Method of inviting tenders for important works.	The selection of one or of several firms well known from long business connection, whose premises are suitable for the special work required, and are so situated that it can be subject from time to time to the personal inspection and supervision of the Elder Brethren and their surveyors, construction at the outports having been found to be unadvisable.	As a general rule the Board of Trade require a more extended competition or public advertisement.	1854.	1860.
—	Other questions, such as the application of the Treasury practice of making abatements on superannuations, the grant to Yarmouth Hospital, the continuation of the Portland Lights, the details of all new works, &c., &c., have been the subjects of discussion, more or less protracted, with the Board of Trade, the views of the Trinity House having been finally concurred in. The number of letters which have passed between the two Boards since 1st October 1853, amount to 2,839 (apart from a great deal of correspondence in explanation of minute queries upon details of accounts), the Board of Trade requiring to see all specifications and drawings before tenders are invited, and all tenders when received before acceptance.	—	—	—

CIRCULAR No. VI.

EVIDENCE OBTAINED THROUGH LLOYD'S AGENTS APPLICABLE TO COASTS
UNDER THE SUPERINTENDENCE OF THE TRINITY HOUSE.

(Numbered on the same system as the Index Map, geographically from East to West—sunwise.)

1

- I. George Brambles, ship broker and owner, Bridlington Quay.
- II. The DISTRICT of BRIDLINGTON.
- III. Flambro' Head lighthouse and the two Smithic buoys under the control of the Trinity House, Deptford, are the only lights and buoys in this district except the tidal harbour light under control of the Harbour Commissioners.
- IV. There is great room for improvement in the tidal harbour light.
- V. I can suggest no improvement in Flambro' Head Light nor the Smithic buoys.
- VI. See answer to No. XI.
- VII. Oil is used at Flambro' Head Lighthouse, candles for the harbour light.
- VIII. The tidal harbour light is occasionally not exhibited.
- IX. I know of no displacement that has led to accidents.
- X. I know of none.
- XI. The tidal harbour light consists of candles in a lantern, exhibited on a staff at the north pier head, and cannot be lighted in very stormy weather, and when burning can with difficulty be distinguished at sea from the ordinary town lights. Two gas pipes from the harbour master's office to the pier head would enable him to light from there. Two lights, one immediately above the other would obviate the difficulty in making out the harbour light.
- XII. No fog signals are used in this district. I think a bell buoy or other fog signal at Flambro' Head would be valuable.
- XIII. North Smithic buoy, spherical with flat top painted red, South Smithic buoy, spherical with black and white squares.
- XIV. I can recommend no improvement.
- XV. No local dues are levied in respect of lights or buoys.
- XVI. I am not aware of any complaints.
- XVII. I have heard several complaints about the tidal harbour light.
- XVIII. See No. XV.
- XIX. See No. XV.
- XX. See No. XV.

Sir,

Goole, 18th January, 1860.

In reply to your favour, received 10th December last, making inquiry on the subject of lighting and buoying, I have mentioned the subject to several parties, who think that as we are upwards of 50 miles from the mouth of the Humber, and not requiring any peculiar lights or buoys, they have nothing to suggest on the subject, an opinion with which I coincide.

I am, sir,

G. Halsted, Esq., Your most obedient servant,
Lloyd's, London. JAMES WAKE.

Sir,

Yarmouth, 30th Jan., 1860.

In reference to the circular from the Committee for managing the affairs of Lloyd's, of 9th December, 1859, I beg to remark, having conversed with many seafaring persons, and others connected with the navigation of this coast, between Hambro' Head and the River Thames, that I must return the questions of the "Royal Commission on Lighthouses," as not applicable, considering that the arrangements of lights, beacons, and buoys, on the above length of coast are so perfect, and cared for by the Trinity establishments, that I could not offer a remark against the present state of these arrangements.

I am, Sir,

Your obedient Servant,
C. R. JOHNSON,
Superintending Agent.

The Secretary of Lloyd's, London.

2

- I. Thomas Small, Lloyd's agent, Lowestoft.
- II. LOWESTOFT, NORTH and SOUTH ROADS and HARBOUR.
- III. Mr. W. Davie, Trinity agent, Great Yarmouth, and the harbour master at Lowestoft.
- IV. Yes.
- V. I am not aware of any improvement that can at present be made.
- VII. I understand all the lighthouses burn oil, except the inner harbour pier lights, which are coloured gas lamps.
- VIII. None to my knowledge.
- IX. None to my knowledge.
- X. None.
- XI. A red flag is hoisted at first quarter flood for ships entering the harbour, and this is sufficient.
- XII. A gong is sounded on board the Stanford Lightship in thick weather, which I think sufficient.
- XIII. A black beacon buoy is placed on the south end of Holm Sand, and a red buoy on the east side of Newcome Sand which mark the entrance of the Stanford Channel. The Pakefield Channel is marked by a black buoy on the south end of Newcome Sand, and a chequered buoy on north end of Barnard Sand.
- XIV. The present arrangement is good.
- XV. No local dues are levied for lights, buoys, or beacons except the customary Trinity lights.
- XVI. None to my knowledge.
- XVII. The general feeling is satisfactory.
- XVIII. There are no local dues for lights, buoys, or beacons.
- XX. The general opinion is satisfactory.

3

- I. Oliver John Williams, 2, Market Street, Harwich, Lloyd's agent.
- II. HARWICH.
- III. Honourable Corporation of Trinity.
- IV. Well lighted and buoyed.
- V. In consequence of Landguard Beach having of late years extended so far to the westward, it has caused the entrance to Harwich Harbour to become very difficult for strangers to enter in the right time; I would suggest that the low light be removed, and so placed as to bring the high and low lights into one, so as to guide strangers safely in by night, and that the Ridge Sand might be removed, which is much in the way of vessels coming into the harbour at night.
- VI. Provided the low lighthouse was removed, so that the two lights could be brought into one, as the leading mark into the harbour, no other lights or buoys would be required.
- VII. Oil.
- VIII. I have always considered that the lights, both by sea and land, have been kept in excellent order.
- IX. The buoys are so well attended to on this coast, that they very seldom get displaced. I do not remember an accident having occurred.
- X. Accidents have occurred, and do occur to strangers entering Harwich Harbour, in consequence of the low light having to be kept so much open whereas they think that to enter the harbour the lights ought to be kept in one; and it often causes them to get ashore on the Andrew's Shoal on Landguard Beach.
- XI. No signals required; not a tidal harbour; accessible at all times of tide.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

ENGLAND.
Circular VI.

- XIII. At the present moment no fog signals are used; but formerly the church bells were always kept chiming on a flood tide during a fog. This was a good guidance into Harwich Harbour, but the practice has been discontinued, because no remuneration was given to the sexton. I consider it highly essential, and recommend the bells to be continued.
- XIV. No change required, that I am aware of.
- XV. The collector of customs collects a small local tax for the Trinity Board.
- XVI. I am not aware of any complaints having been made.
- XVII. Quite satisfied; the low light is the obstacle, together with the clearance of the Ridge Sand.
- XVIII. I never hear a complaint.

- IX. The buoy of the Walleet broke adrift within a few weeks, but no accident occurred that I am aware of, it was replaced within a few days.
- X. None that I am aware of.
- XI. No tide signals are used; they are not required.
- XII. Fog signals are used, viz., gongs on board the Middle lightvessel and the Gunfleet lighthouse.
- XIII. Buoy on the bar red, can buoy; Eagle black, can buoy; Knowle, black and white striped, with a ball, nun buoy; two buoys in the Spitway, North buoy red, with a ball, nun buoy; South buoy, black, can buoy.
- XIV. Not required.
- XV. The local lights, buoys, or beacons belong to the Trinity House, and are collected by the Collector of Customs, Custom House, Colchester.
- XVI. No complaints have been made that I am aware of.
- XVII. The mariners appear satisfied as to the efficiency of the lights, buoys, &c., but they consider what I have suggested in my answers to questions V. and VI would be a great benefit.
- XVIII. The general feeling amongst mariners frequenting the port is that they do not think the charges and dues excessive.
- XIX. No local duties are collected.
- XX. Satisfied.

4

- I. Robert Dickson, Dovercourt, master mariner.
- II. HARWICH.
- III. Trinity House, London.
- IV. Yes.
- V. In my opinion the low lighthouse ought to be removed and placed in such a position that vessels entering the harbour might bring the high and low lights into one, as was formerly the case before the beach at Landguard extended so much to the westward. At the present time strangers entering the harbour frequently make a mistake by keeping both lights in one, and this sets them on to the beach or Andrew's Sand.
- VI. If the low lighthouse is removed and placed as suggested by me in query V., I do not think that any other alteration is required.
- VII. Oil.
- VIII. Am not aware that any of the lights have ever been accidentally extinguished or not duly exhibited.
- IX. Do not recollect any of the buoys to have been displaced.
- X. Vessels frequently ground on the beach in consequence of its having grown out so much to the westward of late years, and masters keeping the high and low lights in one as formerly.
- XI. No tide signals required; harbour accessible at all times of tide.
- XII. The church bells used to chime on a flood tide during a fog; but I understand that now they are not regularly attended to. I do not know of any system better calculated to be of service than the above, if well attended to.
- XIV. I do not think that any change is required in their arrangement.
- XV. A small tax is collected for the local lights, &c., by the collector of customs, by whom it is remitted to the Trinity Board.
- XVI. Do not know of any complaints having been made.
- XVII. Mariners frequently complain of the high and low lighthouses being placed as they are at present.

5

- I. John Green, Chamberlain Wyvenhoe, near Colchester, shipowner and agent to Lloyd's.
- II. COLCHESTER.
- III. There is no person vested with authority, resident or otherwise (except the Honourable Board of Trinity) for the lights, dues, &c.; they are received at the custom house.
- IV. I consider that the port and the coast adjacent is well lighted, buoyed, and beacons, except two or three additional buoys, beacons, &c. at the spots hereafter mentioned.
- V. The Whitaker Spit buoy would be better if it were larger. A buoy or beacon would be desirable if one was placed on the north spit of the Eagle.
- VI. The light on board the Gunfleet lighthouse would be improved if a bright light was exhibited to the north of the east, and by north and west, and by south; this would lead mariners to know when they ought to tack to clear the Sand. It would also be desirable to have a light placed at the east end of the Middle Sand, this would guide mariners passing the Middle and Whitaker sands.
- VII. Oil only.
- VIII. I do not know a single instance.

6

- I. William Spratt Elgar, Cinque Ports Pilot, 98, Lower Street, Deal, Kent.
- II. LONDON.
- III. Trinity House.
- IV. Not quite.
- V. An additional buoy below the Shingles beacon would be of great service, likewise one below the Mouse Light.
- VI. A lightship on the Varne, near where the buoy is placed, would be of very great service. Many ships coming up channel through hazy weather and southerly winds, keeping a westerly course, do not sight Dungeness, and vice versa.
- VII. Not aware.
- VIII. Not to my knowledge.
- XII. The present fog signals very satisfactory.
- XIII. Various.
- XIV. The present system well adapted for the locality, with the exception of bell buoys at the back of the Goodwin.
- XVII. It has frequently been suggested to me by masters of vessels that a light on the Varne would be very beneficial.
- XX. Satisfactory.

7

- I. Edward Bunbury Nott, Captain Royal Navy, special agent to Lloyd's stationed at Deal, in the county of Kent.
- II. COAST generally from DUNGENESS to DEAL, including GOODWIN SANDS, exclusive of the harbours of Dover and Folkestone.
- III. All the buoys, lights, and beacons within the limits above specified are under the control of the corporation of the Trinity House, Deptford Strand.
- IV. Yes; with exceptions named in reply to question VI.
- V. No alteration seems to be required in the position and size of the buoys now laid down. In reference to numbers, see reply to question VI. The position, height, and colour of lighthouses could not be improved upon.
- VI. In reference to question VI, I beg to submit that, having consulted men professionally experienced in the navigation of the part of the coast referred to, it seems to be the general opinion, that there ought to be a light vessel placed so as to indicate at night the proximity of the "Burne," a dangerous sand, five miles in extent, the north-east end of which bears S.S.W. $\frac{1}{2}$ W., $7\frac{1}{2}$ miles from the South Foreland and S.E. $\frac{1}{2}$ S., $7\frac{1}{2}$ miles from Folkestone church. Such a light would be of very great assistance to ships that, from wind and weather, are obliged to keep an offing, and do not make Dungeness. A light so placed should possess

ENGLAND.

Circular VI.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

- some distinctive mark or property; in point of colour for instance, to prevent its being mistaken. And further, in reference to question VI., I beg to submit, that if the four buoys now placed at the back of the Goodwin Sands, and divided over a distance of eight miles, were considerably increased in numbers, and the which had bells attached to them, it would be the means of preventing many casualties. Vessels to or from the coast of Holland or North Sea, passing to the eastward of the Goodwin with light or moderate breezes, in thick weather, or at night, the master probably a stranger, is not aware that from half ebb to half flood the tide takes a strong westerly direction, which has the effect of setting his vessel immediately towards the sands. As there is from 8 to 10 fathoms water close to the outside of the sands, and the present buoys are two miles apart, there is nothing to warn him of his danger. The French ship "De Ruddn," from Buenos Ayres to Antwerp, valued at 40,000*l.*, and the Norwegian barque, "Hos," from Newport to Helsingfors, valued at 10,000*l.*, both got on the sands in August last in the manner described, and became total wrecks. By far the greater proportion of the casualties that occur on the Goodwin happen at night or in thick weather, with moderate winds.
- VII. Supposed oil.
 VIII. Nil.
 IX. Nil.
 X. See above.
 XI. Usual signals at the ports.
 XII. Usual fog signals used; know of no better.
 XIII. Back of the Goodwin Sands: North Sand Head buoy, high, red with triangle; Swatheyway, black, with diamond top; 3d, to the south, striped black and with cage; South Calliper, high, black with ball. Inside Goodwin:—Deal Bank buoy, red; Bunthead, black and white, rings with ball.
 XIV. No, except as recommended in reply to the VIth question.
 XV. Nil.
 XVI. Nil.
 XVII. Those that exist are efficient; others required as specified.
 XVIII. Unknown.
 XIX. Unknown.
 XX. No.—19th December 1859.

8

- I. James Hewett, Captain, R.N., agent to Lloyd's and Trinity House.
 II. Off EASTBOURNE.
 III. Captain James Hewett, R.N.
 IV. I have not heard any complaint.
 V. Buoys and lighthouse well placed.
 VI. No additional lights or buoys required.
 VII. Oil used at the Beachy Head Lighthouse; a very good light.
 VIII. None.
 IX. Yes; the Sovereign Buoy, in June last, replaced immediately.
 X. I know of none.
 XI. None wanted.
 XII. None required.
 XIII. Red large buoy on the Sovereign Shoal.
 XIV. No.
 XV. None levied.
 XVI. None to my knowledge.
 XVII. None but colliers and fishing boats come here. Beachy Head Light is all that is required.
 XVIII. No local dues collected.
 XIX. None are collected.
 XX. None.

9

- I. William Kitching, Naval Chief Officer of Coast Guard.
 II. Off EASTBOURNE.
 III. Capt. Hewett, R.N., residing at Eastbourne.
 IV. No.
 V. A light ship to be placed in lieu of the buoy on the Sovereign Shoal.
 VI. The Sovereign Shoal. In consequence of the buoy not being visible on a dark night.
 VII. Oil.

- VIII. None, to the best of my knowledge.
 IX. Yes; the Sovereign Buoy, in June last. A vessel supposed to have run it down. Replaced immediately.
 X. I know of none where direct evidence can prove it.
 XI. None wanted.
 XII. None required.
 XIII. Red. Conical. I know of no system in which they are arranged.
 XIV. No.
 XV. None levied.
 XVI. I know of none.
 XVII. The masters of colliers and fishing boats from the place, whom I have consulted, are of opinion that a light ship on the Sovereign Shoal would be of great benefit to shipping in general.
 XVIII. No local dues levied.
 XIX. None are collected.
 XX. I know of none.

10

- I. Thomas Harling and Company, agent to Lloyd's, and ship agents.
 II. COWES, ISLE OF WIGHT.
 III. Admiralty and Trinity Boards.
 IV. Yes, we think so.
 V. We cannot point out any improvement necessary.
 VI. We know of no additional being required.
 VII. Oil.
 VIII. We are not aware of such having been the case.
 IX. We have no recollection of any.
 X. Ditto.
 XI. Not used, therefore not wanted we presume.
 XII. Guns are used we believe at the light stations, and we think they might as well be used at the coast guard stations at the south part of this island, but in stormy weather, as they might not be distinctly heard, the firing of guns or rockets at intervals at Bembridge, and at the forts at Sandown, Freshwater, and Hurst, might be advisable.
 XIII. They are black, white, and red, bell and staff buoys of conical form.
 XIV. We cannot recommend any.
 XV. Lights only, and received by collector of customs for account of the Trinity Corporation.
 XVI. We know of no complaints having been made to the authority above.
 XVII. We have never heard them complain.
 XVIII. Lights being very serviceable and reduced 50 per cent. the general feeling seems to be favourable.
 XIX. We should think they are.
 XX. We are not aware of any.

11

- I. Jonathan Jolliffe, Bonchurch, Isle of Wight, Builder &c.
 II. BONCHURCH, ISLE OF WIGHT.
 III. The only light in my district is the Nab light of Bembridge Point.
 IV. The only point where a light could be of any use is on Dunnose Point, and, I think, not much there.
 V. The only buoys are off Bembridge ledge, which I believe to be sufficient.
 VI. None.
 VII. None.
 VIII. I am frequently having colliers, but I hear of no complaint.

12

- I. Andrew Snape Hamond, Captain R.N., J.P. and D.L. Norton Cottage, Freshwater, Isle of Wight.
 II. WEST CHANNEL OF ISLE OF WIGHT, from Cowes westward.
 III. Admiralty.
 IV. Well lighted, but not sufficiently buoyed.
 V. 1st, another buoy on south side of Shingles shoal recommended; 2nd, a buoy on Pennington Spit; 3d, a buoy on the north-west coast of Blackrock ledge, or the present beacon placed further out; 4th, a buoy on outer ledge of rocks between Warden ledge and Cliff's End Fort.
 VI. Answered under previous head.
 VII. Oil.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

ENGLAND.

Circular VI.

- VIII. Not aware of any.
- IX. Not aware of any.
- X. Have seen numerous vessels on shore on outer edge of Black park; also on Pennington Spit; also between Warden Ledge and Cliff's End Fort; also on southern side of Shingles shoal.
- XI. None wanted.
- XII. Fog signal on Needle Lighthouse very useful.
- XIII. Buoys are of the conical form. Query—whether all the buoys on the northern shore might not be one colour, and buoys on southern shore of an opposite.
- XIV. Answered under previous head.
- XV. Not aware of any.
- XVI. Complaints have been frequently made by masters of vessels with regard to want of a buoy on Pennington Spit; also with respect to Black rock.
- XVII. Generally very good.
- XVIII. None collected.
- XX. Am of opinion that the present management is very good.

- XIV. None.
- XV. None that I am aware of.
- XVII. Good.
- XX. None.

16

- I. Joseph Harding, Pilot, Lombard Street, Portsmouth.
- II. PORTSMOUTH PILOTAGE DISTRICT.
- III. Her Majesty's Dockyard, and Trinity Board.
- IV. Yes, with slight alterations.
- V. Ower's lightvessel to exhibit three lights instead of one, there being too much similarity between it and St. Catherine's.
- VI. A beacon buoy in six fathoms, on the south-west of Fuller Bank. Ships shaping a north-west course into St. Helen's, on the first of a flood tide, and light winds, are liable to be set on that shoal before they are aware of it; it being three to four miles from the shore.
- XIII. Principally black and white; circular, with flat heads; some beacon buoys; white port side of channel, and black to starboard.
- XIV. None.
- XV. None that I am aware of.
- XVII. Good.
- XX. None.

- I. J. Garratt, Lloyd's agent, Portsmouth.
- II. PORT of PORTSMOUTH.
- III. The Government Yard and Trinity Board.
- IV. Yes; with some addition.
- V. Would recommend a beacon on the Deantail buoy.
- VI. Monster beacon buoy about six fathoms on south-west end of Boulder Bank, as when the Prussian frigate "Thetis," arrived at this port a few weeks since would have been on shore had it not been for the Selsey Bill pilots.

- VII. Oil.
- VIII. None.
- IX. None.
- X. None.
- XI. None, and not wanted.
- XII. None; not required.
- XIII. Black and white, circular, with flat heads, white on starboard, and black on port coming into harbour.
- XIV. None.
- XV. None.
- XVI. None.
- XVII. Generally good and approved of.

17

- I. James Cook, 25, Penny Street, Portsmouth, first class Trinity pilot.
- II. PORTSMOUTH.
- III. Authorities of H.M. Dockyard and Trinity Board.
- IV. Yes.
- V. I consider that there should be a more uniform system of placing buoys, so that, as far as practicable, all buoys of a particular colour, say black, should be left on the same hand, say the starboard, in all channels.
- VII. Oil.
- VIII. No.
- IX. No.
- XI. Not wanted.
- XII. Gongs on board the light vessels.
- XIII. Harbour channel buoys, black on port side, white on starboard, in coming in. All can buoys, except Bell Buoy at Spit.
- XVII. Have never heard any complaints.

- I. Henry B. Ash, Starcross, merchant, agent for Lloyd's.
- II. STARCROSS, MOUTH of the RIVER EXE, PORT of EXETER.
- III. The Trinity Board exercise control over the buoys in the harbour and on the bar.
- IV. I think a light on Straight Point would be very desirable for pointing out the position of the bar at night, as many accidents have arisen by vessels touching on the Pole Sands waiting for daylight to enter the harbour whilst standing off and on.
- V. I think a more conspicuous buoy, with a beacon on it for the outer fairway buoy, would be desirable.
- VI. The extreme end of Straight Point, as in thick weather, it would not be obscured.
- VII. No light near.
- VIII. No answer.
- IX. The buoys may have been occasionally temporarily displaced, but I am not aware of any accident in consequence.
- X. 1853, December, the "Hoabets Anker" struck on the Pole Sands, and was wrecked. January, 1854, the "Atalanta," Richard, struck on the Pole Sands and became a wreck. November 20, 1857, the "North Star," Cornish master, grounded on the Pole Sands with a valuable cargo on board, but came off again; vessel injured.
- XI. Ships rarely take the bar at night unless of light draught and in fine weather, and I do not think tide lights are wanted.
- XII. I do not think they are required.
- XIII. Black on the starboard hand and white on the port hand coming in, the fairway buoy being red.
- XIV. No.
- XV. Local charge for the buoys payable to the Trinity House of one halfpenny per ton for British or privileged vessels, and 1d. per ton for unprivileged vessels.
- XVI. None.
- XVII. I have heard it expressed that a light on Straight Point would be desirable.
- XVIII. I am not aware of any complaint.
- XIX. Yes.
- XX. I am not aware of any.

15

- I. Wm. Mair, pilot, 3 Battery Row.
- II. PORTSMOUTH PILOTAGE DISTRICT.
- III. Her Majesty's Dockyard and Trinity Board.
- IV. Yes; with slight alterations.—Owers light vessel to exhibit three lights instead of one, there being too much similarity between it and St. Catherine's.
- VI. A beacon buoy in six fathoms on the south-west end of Fuller Bank. Ships shaping course north-west into St. Helen's on the first of a flood tide and light winds are liable to be set on that shoal before they are aware of it, it being three to four miles from the shore.
- XIII. Principally black and white, circular, with flat heads. Some beacon buoys. White, port side of channel, and black to starboard.

- XVI. None.
 - XVII. I have heard it expressed that a light on Straight Point would be desirable.
 - XVIII. I am not aware of any complaint.
 - XIX. Yes.
 - XX. I am not aware of any.
- James Bishop, East Looe, merchant and shipowner.
- II. LOOE, CORNWALL.
 - III. Nil.
 - IV. No buoys.
 - V. Nil.
 - VI. I would suggest the placing of a tower on St. George's or Looe Island, as it is not easily distinguishable from the mainland in hazy weather.

18

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

ENGLAND.

Circular VI.

- VII. Nil.
 X. It is possible that three wrecks might have been avoided had a tower been on Looe Island. These vessels got embayed, and did not know their position.
 XI. A pilot flag is hoisted half-mast at Looe Pier when there is eight feet of water at the mouth of the harbour; at mast-head when there is eleven feet or more.
 XVII. The pilots and others consider it to be desirable that a tower should be erected on St. George's or Looe Island.
 XIX. None collected.

19

- I. William Broad and Sons, general merchants and agents to Lloyd's of 48 years standing.
 II. FALMOUTH.
 III. Elder Brethren of the Trinity House by the local Sub-Commissioners of Pilotage, of whom one is the Collector of Customs. The lighthouse of St. Anthony, and buoys and beacons are more immediately under the care of Captain Ditcham of the Trinity cutter stationed at Plymouth.
 IV. Yes.
 V. We can suggest no improvement in any of these points.
 VI. None.
 VII. Oil is used both at the Lizard and St. Anthony.
 VIII. No such casualty has ever occurred to our knowledge.
 IX. The Manacle buoy has occasionally broke adrift, but has been very speedily replaced by the Trinity cutter, and we know of no accident arising from the circumstance. (It has been our province to notify as quickly as possible, on learning of the drift of the buoy, to Captain Ditcham at Plymouth, and instant attention has been given.)
 X. Not aware of any.
 XI. No tide signals are used, and we have never heard the want of them complained of.
 XII. None used, and we presume are not deemed necessary
 XIII. There are three buoys in Carreg (or Carrick) roads, a black one on the east, and a white one on the west bank, denoting the entrance to the channel, and a black one to the north, showing the fairway to the cross channel. The form is conical. The beacon which is on the Black Rock at the entrance of the port is painted black, with a hollow iron-hooped ball at the summit to give sound.
 XIV. None.
 XV. The local dues for St. Anthony Light are collected by the Collector of Customs. There are no charges for buoys or beacon.
 XVI. Not aware of any.
 XVII. One of efficiency.
 XVIII. Are not aware of any complaints being made, or the least demur to the rating.
 XIX. We can only presume so, the Trinity Board having the receipts.
 XX. The lights and buoys being deemed efficient, public opinion may be considered as favourable.—17th December, 1859.

20

- I. Henry Eden, Falmouth, Commander, R.N., Lloyd's supervising agent.
 II. FALMOUTH.
 III. Trinity House and Admiralty, London.
 IV. Yes.
 V. None.
 VI. None.
 VII. Oil.
 VIII. Not aware.
 IX. Not aware.
 X. Not aware of any.
 XI. None wanted.
 XII. None required.
 XIII. One white and three black buoys, can shaped, and one black beacon on the Black Rock.
 XIV. None.
 XV. For the local light on St. Anthony's Point, on oversea ships, a halfpenny per ton register, less 50 per cent., and on coasters an eighth of a penny per ton register, less 50 per cent. Poleage dues for the beacon on the Black Rock, two shillings and

sixpence each vessel. The above dues are paid to the Trinity House and the corporation of Falmouth.

- XVI. Not aware of any.
 XVII. That they are efficient.
 XVIII. There does not appear to have been any objection to these dues.
 XIX. No means of ascertaining.
 XX. Not aware.—20th December, 1859.

21

- I. William H. Miller, Stratton Place, Falmouth, 36 years commanding Her Majesty's revenue cruisers, 15 years of which on the Falmouth station, and for merely several years an officer in the Hon. E. I. Company's service.
 II. FALMOUTH.
 III. Collector of Customs, and Sub-Commissioners. Port of Falmouth.
 IV. Yes.
 V. None to suggest.
 VI. None.
 VII. Oil.
 VIII. Attendance appears to be very regular and efficient.
 IX. None that I am aware of.
 X. None.
 XI. None used or required.
 XII. None used or required.
 XIII. One buoy on the point of the western bank, white. One buoy on the point of the eastern bank, black, denoting the entrance of Carrig Road channel. One buoy, black, denoting the fairway to the cross roads or channel. One buoy, black, on Lugo Rock, eastward of St. Mawe's Creek. N.B. All can buoys.
 XIV. No.
 XV. None.
 XVI. Not aware of any.
 XVII. Efficient.
 XVIII. No complaints.
 XIX. Yes.
 XX. No.

22

- I. Francis Baufield and Sons, St. Mary's, Scilly, agents for Lloyd's.
 II. The ROADSTEADS and PORT of SCILLY, including SEVEN STONES.
 III. The Honourable Corporation of the Trinity House.
 IV. The place is sufficiently lighted since the lighting of the Bishop Rock Lighthouse. The buoys and beacons of this place are quite insufficient. There being only two beacons, one on the Crow Rock and the other on the Woolpack, both recent erections. There are no buoys whatever.
 V. It has occurred to us that, a distinguishing mark of some kind on the Bishop Lighthouse would prevent the possibility of its being mistaken in thick weather by day for the Eddystone or other rock lighthouse by ships whose reckoning may be much out from any cause.
 VI. It is of great importance that a beacon should be fixed on the Gunners Rock in Bquad Sound. Also that buoys should be placed on Le Jeffrey and Old Wreck, two rocks off Annet Head; also that a buoy should be placed to the north part of Tink Ledge, in the south-west channel of Broad Sound, and a buoy on the Steeple Rock in the north-west channel. It is also important that buoys should be placed on the eastern part of both the Spanish and Bartholomew Ledges in St. Mary's Sound. It is also important that a buoy should be placed to the south of the "Hats," in Crow Sound, a buoy to the south of the "Pots" in St. Mary's Roads, and one to the westward of Bacon Ledge in St. Mary's Pool, and a beacon on the Cow Rock, in the same place, would be very useful. Our reasons for the above are, that they are urgently needed for the safety of ships bound in when in charge of pilots, as they have at present no assistance from buoys and beacons, and it is in consequence much more dangerous than it would be, and buoys on the Spanish and Bartholomew Ledges would be especially useful to coasters bearing up in eastwardly gales, who often come in without pilots.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

- VII. We do not know, but we believe refined rape oil.
 VIII. These have not been accidentally extinguished for many years at least, but always duly exhibited.
 IX. No buoys at present.
 X. Many losses have occurred on different parts of these islands during the last 20 years, and there can be no doubt that many of them would have been prevented if the above recommended buoys and beacons had been fixed.
 XI. Tide signals are neither used nor required.
 XII. A bell is rung at the Bishop by machinery, and a gong is used at the Seven Stones Lightship in fogs.
 XIII. The beacons are hollow iron cones fixed on the rock, with iron masts, and a hollow cage on the top, painted red.
 XIV. No.
 XV. None lived.
 XVI. We know nothing of what complaints may have been made to the Trinity House.
 XVII. That the lights are efficient, but that buoys and beacons are wanted here in the same way and for the same reasons as for sands and shoals leading into all frequented harbours.
 XVIII. There are none.
 XIX. See last.

23

- I. John Jenkins, St. Mary's, Scilly, captain of a coasting vessel.
 II. SCILLY ISLANDS.
 III. Trinity Corporation, London.
 IV. It is well lighted, but not buoyed and beacons sufficiently.
 V. Beacon on the Picked Rock and a buoy on Steeple Ledge in the north-west channel of Broad Sound. Beacon on the Gunner Rock in Broad Sound; buoys on the Le Jeffrey and Old Wreck Ledges off the north part of the Island of Annet; buoy on the north side of the Tink Ledge, in the south-west channel of Broad Sound; buoys on the eastern side of the Spanish and Bartholomew Ledges, in St. Mary's Sound. Buoy on the southern side of the Hats Ledge in Crow Sound. The reason for my wishing the above buoys and beacons to be placed as above is for the guidance of pilots in charge of ships, and also for the masters of coasting vessels.
 VIII. They have been always duly exhibited and not accidentally extinguished since my remembrance, nor before, that I am aware of.
 IX. There are no buoys.
 X. There have been numerous wrecks on these islands during the last twenty years, many of which would have been avoided if the above buoys and beacons had been in place. I recollect three or four total losses on the Bartholomew Ledge, and several vessels having struck on the Spanish and the Hats Ledges, and many lost in Broad Sound.
 XI. There are no tide signals.
 XII. There is a fog bell on the Bishop Lighthouse worked by machinery, and a gong at the Seven Stones Lighthouse.
 XV. There are no local dues.
 XVII. That as many buoys and beacons as can be desirable in a place where there are so many reefs and rocks.—19th Dec., 1859.

24

- I. H. W. Hartnell, secretary to the Bristol General Steam Navigation Co.
 II. BRISTOL.
 III. The Trinity Board's superintendent at Milford.
 IV. The north shore of Bristol channel is so; the south is capable of improvement.
 V. The post on Nelson's Point at the entrance of the Avon should be replaced by a more conspicuous object.
 VI. A tower may be placed on the Dunball as a lead to the deep water channel of the Swash entering the river. A buoy at each end of the deep water

- channel across the Welsh and English grounds would facilitate the navigation between Newport and Bristol by preventing the necessity of going all round when the land marks are obscured.
 VII. Oil.
 X. Ships and steamers have occasionally grounded on Nelson's Point and the Swash, but with the exception of some delay and expense without injury. Experienced persons have deviated from the right channel when the banks are well covered on spring tides.
 XI. Tide signals not needful.
 XII. Fog signals are much needed with distinguishing strokes of a gong, to be struck if possible by machinery, from the Dunball or Avon light, Blacknose Point, lightship, and so on down channel.
 XV. 1s. per vessel for Burnham Light.
 XVII. Generally satisfactory.
 XVIII. The aggregate paid by steamers for lights is a large item in the coasting trade where voyages are frequent.

25

- I. Henry Edwards, ship agent, Newport, Monmouthshire.
 II. NEWPORT, MONMOUTHSHIRE between RUMNEY RIVER and REDWICK PILL.
 IV. No; a buoy required at Peterston Patch.
 V. 12 feet buoy out of water, painted black.
 VI. See IV. and V.; master mariners, pilots, &c. say a buoy would be very useful.
 VII. Oil.
 VIII. No.
 IX. No.
 X. None.
 XI. None.
 XII. None.
 XIII. Two buoys; entrance of the river Usk, one painted white, other black.
 XIV. None.
 XV. Harbour dues, $\frac{1}{4}d.$ per ton register coasters; $\frac{1}{2}d.$ per ton register over sea, when laden, paid to the harbour commissioners. Local lights belong to the Trinity, $\frac{3}{4}d.$ per ton register, less 5 per cent. off, over sea.
 XVI. Not heard of any.
 XVII. Not much.
 XVIII. No complaints.
 XIX. Yes.
 XX. No.

26

- I. John Smith Phillips, Newport, Monmouthshire, collector of harbour dues, &c.
 II. NEWPORT, MONMOUTHSHIRE.
 III. The Elder Brethren of Trinity House of Deptford Strond.
 IV. Yes.
 VI. The buoys appear to me to be properly placed.
 VII. Oil.
 VIII. I believe the lights have been well attended to, and duly exhibited for many years.
 IX. The "white," or eastern buoy, at the mouth of the river Usk, has been displaced for a short time, but was soon replaced, and not any accident occurred in consequence.
 X. I do not know of any.
 XI. Not required in my opinion.
 XII. I do not think they are required.
 XIII. Colour, one black and one white; form, cylindrical. The black or western, and the white or eastern are placed, one the western, the other on the eastern side of the mouth of the river Usk.
 XIV. I am not aware that any change could be made; the only fault is, that white or eastern buoy is not sufficiently discernible by night.
 XV. Nil.
 XVI. Nil.
 XVII. Satisfied.
 XVIII. Not any local dues.
 XX. I have not heard any opinion expressed as to the management of lights, &c. in this port.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

ENGLAND.

Circular VI.

27

- I. George Holland, Cwm Ivy Gower, Llanmadock, near Swansea.
 II. WHITFORD.
 III. No person is appointed.
 IV. Bury bar and the harbour is well lighted and buoyed.
 V. I can suggest no improvement, but a light at the Worms Head I consider would be useful.
 VI. No lights more are necessary within the limits of Bury bar.
 VII. All lighted with oil.
 VIII. None that I am aware of.
 IX. None that I have heard of.
 X. I remember none.
 XI. A light on Whitford Scarce from half flood till half ebb.
 XII. I am not aware if fog signals are used.
 XIII. Black buoys in the centre of the channel.
 XIV. I have no reason to recommend any change.
 XV. I am not aware if any dues are levied.
 XVI. Have not heard of any complaints.
 XVII. I consider satisfactorily.
 XVIII. I have heard no direct complaints.
 XIX. I believe so.
 XX. None.

28

- I. Joseph Button, Llanmadock, near Swansea, retired mariner.
 II. WHITFORD.
 III. No person residing here.
 IV. Bury Bar, and the harbours within it, are well lighted and buoyed.
 VI. There are no more lights necessary within Bury Bar.
 VII. Lighted with oil.
 VIII. Am not aware that any have.
 IX. Have not known any accident to have occurred.
 X. Do not remember any.
 XI. A light on Whitford Seare, from half flood till half ebb.
 XIII. Black can buoys in the middle of the channel.
 XIV. Cannot recommend any change in colour, form, or arrangement.
 XVI. Have not known any complaints.

29

- I. John Rees, Saint David's, Pembrokeshire, late master mariner, and agent to Lloyd's.
 II. POORHCLAIS, in the DISTRICT of ST. DAVID'S.
 IV. No.
 V. A beacon.
 VI. There is a dangerous rock about one mile and a half south-west of the port of Poorhclais, which covers at one hour's flood, and is dangerous to vessels trading to this port, and to others seeking shelter at St. Bride's Bay with westerly winds, and a beacon placed on the same would be an improvement.
 X. For the want of a beacon on a rock called the Sledges, which lies to the westward of Abernethy, where several vessels has been lost, and one in November which received a considerable damage, and had to put in to Solva in a sinking state, as reported in the "Shipping Gazette."

30

- I. Thos. Jackson, Lloyd's agent and shipowner, Milford.
 II. MILFORD.
 III. Trinity House.
 IV. No.
 V. Sleomer Island; I know no place where a light is so much needed.
 VI. Weir Point in Milford Haven, and Sleomer Island.
 VII. Oil.
 VIII. None to my knowledge.
 IX. Nil.
 X. Many ships have missed the finest harbour in England, i.e., Milford Haven, for want of a signal on Sleomer Island.
 XI. None used or wanted.
 XIV. No.
 XV. None.
 XVI. None.

- XVII. General complaint of there being no light on Sleomer Island.
 XX. That it is good.

31

- I. David Vaughan, agent to Lloyd's, Fishguard.
 II. CARDIGAN BAY, from ST. DAVID'S HEAD to DINAS HEAD.
 III. I do not know of any other than the Trinity Board.
 IV. No.
 V. I suggest that two beacons should be erected on both heads at Abercastle, and a lighthouse on Cringodie Head, at the entrance of Fishguard Bay, when, during that awful night of the 25th of October, no doubt the "Charles Holmes," from Liverpool for Mobile, might have been saved, as other vessels acquainted with Fishguard Roads brought up and rode the gale out, without destruction to property or life. The lighthouse I propose on Y Penyrcoed Head would lead a light to clear Stumble Head, and lead to a safe anchorage in Fishguard Bay.
 VI. Beacons at Abercastle; lighthouse at Penyrcoed, near the entrance of the roadstead.
 VII. Oil.
 VIII. Not aware of any.
 IX. No other buoy than on the wreck of the brig "Lady Kenmare" at Goodwick, which is carefully attended to by the Trinity Board.
 X. Refer to the wreck of the ships which were lost in October 1846; if there had been a lighthouse to direct vessels every soul would have been saved.
 XI. No.
 XII. No.
 XIII. Green.
 XIV. No.
 XV. North Bishop and Bardsey Island.
 XVI. Several meetings having been called, and well attended, to petition Her Majesty's Government to take into consideration the importance of the bay.
 XVII. The general feeling from all master mariners that Fishguard requires a lighthouse.
 XVIII. Would freely pay.
 XIX. There are no local dues.
 XX. As agent to Lloyd's, I am not aware of any complaint. I have inquired from the most skilful master mariners, they all agree with me, that the foregoing answers would be of the greatest benefit to all vessels trading in the St. George and Bristol Channels, being often blown off by westerly gales from Cork and Waterford.

32

- I. William Bulkeley Jones, agent for Lloyd's, Holyhead.
 II. HOLYHEAD.
 III. The Trinity House.
 IV. I recommend a bell buoy on the Alipera rocks, in Holyhead Bay, and a beacon on Salt Island reef. Memorial sent to the Admiralty by Capt. Hirste, in July 1859.
 VI. A buoy or perch on Maen-y-Piscod Rock, off Rhanolyn, in Carnarvon Bay.
 VII. Oil in the lighthouse and gas in the pier-head lamps.
 VIII. The lights have been duly exhibited every night.
 IX. The Victoria buoy got adrift about a month ago, but was replaced without delay. No accident occurred in consequence.
 X. I am not aware of any.
 XI. No tide signals required here.
 XII. Fog signals on the mountain; a gun fired every half-hour during a fog.
 XIII. All the buoys are painted black, except the Victoria, which is red and white.
 XIV. No change required.
 XV. All local dues are paid at the custom house.
 XVI. I have heard of no complaints.
 XVII. The general opinion is, that the lights are efficient.
 XVIII. I have not heard of any complaints.
 XIX. I should suppose they were as they are collected at the custom house.
 XX. They are well managed under the Trinity Board.—
 27th December 1859.

SCOTLAND.

CIRCULAR No. I.

CONSTITUTION OF GENERAL AUTHORITY, &c.

(The numbers in the outside margin are the corresponding numbers in Circular No. I.—England.)

I. Royal Commission, Lights, Buoys, and Beacons,
7, Millbank Street, S.W., London,
4th June 1859.

II. The Provost of Dundee,
Greenock.
The Sheriff of Edinburgh,
Lanark,
Renfrew,
Bute and Dumbarton,
Argyle,
Inverness,
Ross.
Orkney,
Caithness and Sutherland,
Aberdeen,
Ayr,
Fife,
Forfar,
Wigtown,
Kincairdine,
Kirkcudbright,
Elgin.

The following are the names of the present holders of these offices:—

The Right. Hon. James Moncrieff, M.P., Lord Advocate.
Edward F. Maitland, Esq., Solicitor General.
The Right Hon. John Melville, Lord Provost of Edinburgh.
James Blackadder, Esq., 1st Baillie of Edinburgh.
The Hon. A. Galbraith, Lord Provost of Glasgow.
J. Houldsworth, Esq., 1st Baillie of Glasgow.
John Webster, Advocate, Provost of Aberdeen.
Colin Lyon Mackenzie, Esq., Provost of Inverness.
John Beith, jun., Esq., Provost of Campbeltown.
David Johnson, Esq., Provost of Dundee.
James Duff, Esq., Provost of Greenock.
John Thomson Gordon, Esq., Sheriff of Edinburgh,
Gloucester Place, Edinburgh.
Sir Archibald Alison, Bart., Possil House, Glasgow,
Sheriff of Lanarkshire.
R. Macfarlane, Esq., 31, Heriot Row, Edinburgh, Sheriff of Renfrew.
Robert Hunter, Esq., 67, Northumberland Street, Edinburgh, Sheriff of Bute.
Thomas Cleghorn, Esq., 26, Queen Street, Edinburgh, Sheriff of Argyle.
George Young, Esq., 47, Moray Place, Edinburgh, Sheriff of Inverness.
A. S. Cook, Esq., 35, Great King Street, Edinburgh, Sheriff of Ross.
William E. Aytoun, Esq., 16, Great Stuart Street, Edinburgh, Sheriff of Orkney.
George Dingwall Fordyce, Esq., 5, Forbes Street, Edinburgh, Sheriff of Caithness and Sutherland.
Archibald Davidson, Esq., 24, Rutland Square, Edinburgh, Sheriff of Aberdeen.
John Christison, Esq., 3, Great Stuart Street, Edinburgh, Sheriff of Ayr.
Alexander E. Monteith, Iverleith House, Edinburgh, Sheriff of Fife.
Alexander S. Logan, Esq., 12, York Place, Edinburgh, Sheriff of Forfar.
Adam Urquhart, Esq., 5, St. Colme Street, Edinburgh, Sheriff of Wigtown.
E. D. Sandford, Esq., 11, Randolph Crescent, Edinburgh, Sheriff of Kirkcudbright.
J. Montgomerie Bell, Esq., 2, Forbes Street, Edinburgh, Sheriff of Kincairdine.
B. R. Bell, Esq., 5, Rutland Square, Edinburgh, Sheriff of Elgin.

II. The duties of the Commissioners and their division:—
The duties of the Commissioners are to take charge of the Northern Lighthouses.

Prior to 1857 these duties were discharged by a committee of all members resident in Edinburgh, which met every alternate Wednesday, denominated "The Bell Rock Committee;" but many of the most efficient members having withdrawn their attendance on account of the dissatisfaction with, and indeed constant interference of, the Board of Trade, which they considered prejudicial to the interests of the Commission, an attempt was made to re-construct the committees, by appointing a committee of three to attend each month by rotation. These committees were composed in a great measure of members who, though equally dissatisfied with the proceedings of the Board of Trade, yet considered it their duty to continue to act.

III. SIR,—I AM directed to request that you will move the following information:—
I. Commissioners of Northern Lighthouses, and furnish the following information:—
II. I. A list of the persons who now constitute the Commissioners of Northern Lighthouses, giving the name, rank, and profession of each member, with the number of years during which he has been a member, the mode of election, and remuneration, if any.
V. II. The duties of the Commissioners and their division, with the names of individuals filling each office or composing each committee, and the mode of appointing the committees or other bodies and their members.
VI. III. The days appointed for general or other meetings.
VII. IV. Names of members who attended each meeting in 1857 and 1858, with the dates of their attendance.
VIII. V. Names of members who have been employed on special services or inspections in 1857 and 1858, with a statement showing the nature of the services on which they were employed, and the time occupied.
IX. VI. Copies of the standing orders for the guidance of general or other meetings of the Commissioners and their sub-divisions.
XIII. VII. Detailed account of the system employed in conducting the financial department of the establishment, showing how and where the moneys received for lights, buoys, and beacons are retained pending the process of final transmission, and also mode adopted for maintaining and dispensing the necessary moneys for the current and ordinary expenses of the establishment, and for meeting the bills due under builders, engineers, and other contracts, as well as for regular maintenance of the lights, buoys, and beacons.
XIV. VIII. Names, ages, dates of appointment, and salaries of the persons composing the establishment of the office; and if they are engaged in fulfilling duties other than those connected with lights, buoys, and beacons, state what these duties are, the time occupied in their discharge, and the proportion of salary attached to each duty.
XV. IX. Mode of selecting and appointing the officers.
XVI. X. List of persons in receipt of pensions, superannuation, or similar allowances, the amount paid to each in 1857 and 1858, their ages, the date of superannuation, length of service, and reason assigned for placing them on the retired list.
X. XI. The gross income and expenditure in respect of lights, buoys, and beacons for 1857 and 1858.
XI. XII. A detailed amount of expenditure for the same period, and mode of audit, and the names and office of the auditors.

Should there be any point in this letter on the questions previously sent to the Commissioners of Northern Lighthouses relative to which it may be deemed advisable to communicate personally with the Lighthouse Commissioners in London, I am directed to state, that Friday the 10th instant will be the most convenient day for the Commissioners to receive the Secretary to the Commission of Northern Lighthouses.

I am, &c.
(Signed) J. F. CAMPBELL, Secretary.

RETURN, &c.

In obedience to the preceding, the Commissioners submit,

I. Commissioners, with their names, rank, and profession:—

The following gentlemen are ex-officio Members of the Board of Northern Lighthouses; they are not elected, and they have no remuneration:

The Right Hon. the Lord Advocate.
Mr. Solicitor General.
The Lord Provost of Edinburgh.
The eldest Baillie of Edinburgh.
The Lord Provost of Glasgow.
The eldest Baillie of Glasgow.
The Provost of Aberdeen,
" Inverness,
" Campbeltown,

II.

U

SCOTLAND.
Circular I.
Question II.

- SCOTLAND.
- Circular
I. Question
V.
- III. & IV. CONSTITUTION OF GENERAL AUTHORITY, &c.
- After two years' experience, the Commissioners found it expedient to return to the old arrangement of a committee of all the members resident in Edinburgh, which meet every alternate Wednesday, except in April, August, and September. The committees are appointed by the general meeting in January.
- III. The days appointed for general meetings:—
There are four general meetings in the year, viz.,
1. Second Saturday of January.
2. Third Wednesday of March.
3. Saturday before the Court of Session rises in July.
4. Third Wednesday in November.
Extra meetings can be summoned at any time.
- VII. V. Names of Members who attended each meeting in 1857 and 1858 with the dates of their attendance.
- § 1. 1857.
- Ordinary Committee, 6th January 1857.
Present,
Robert Thomson, Esq., Chair.
E. D. Sandford, Esq.
- General Meeting, 10th January 1857.
Present,
R. Macfarlane, Esq., Chair.

I.
Questi
XIII
- V. Names of members who have been employed on special services or inspections in 1857 and 1858, with a statement showing the nature of the services on which they were employed and the time occupied.
- § 1.—1857.
1. Names of members :—
Alexr. E. Monteith, Esq., Sheriff of Fife.
Thos. Cleghorn, Esq., Sheriff of Argyll.
E. D. Sandford, Esq., Sheriff of Kirkcubright.
F. B. Douglas, Esq., First Bailie of Edinburgh.
 2. Lighthouses visited and inspected, and other business :—
 - 1st. Conference with the local authorities at Douglas, in the Isle of Man, in regard to the proposed surrender to the Commissioners of the light on Douglas Head.
 - 2nd. Visited the works in progress at Ushenish Lighthouse in South Uist.
 - 3rd. Visited and inspected Barrahead Lighthouse.
 - 4th. Visited and inspected Skerryvore and Shore establishment.
 - 5th. Visited and inspected the works in progress at Rhu Vaal Lighthouse.
 - 6th. Inspected the sites of lighthouses proposed at M'Arthur's Head, Islay, and Phladda Easdale; also those which had been under discussion at Skervule and Ruadsgier.
 - 7th. Inspected the arrangements for coaling and buoy yard at Oban, and agreed to a report on their inconvenience.
 - 8th. Visited the works in progress at the Sound of Mull Lighthouse.
 - 9th. Prevented by stormy state of the weather from landing at Ardnamurchan, but proceeded to Isle Oronsay, in Skye, and inspected the works in progress there.
 - 10th. Visited the works in progress at Kyleakin Lighthouse, in the Sound of Skye.
 - 11th. Proceeded to Portree inspecting the Goblach Reef, on which a beacon had been applied for, and the Gulnare and M'Millan's Rocks, on which buoys had been applied for.
 - 12th. Visited and inspected the works in progress at the new lighthouse of Rona, in the Northern Sound of Skye.
 - 13th. Visited Stornoway Lighthouse, in the Lewis.
 - 14th. Visited Cape Wrath Lighthouse and premises.
 - 15th. Visited Pentland Skerries Lighthouse.
 - 16th. Landed on the Isle of May, and inspected the lighthouse.
 - 17th. Returned, and landed at Granton.
- § 2.—Time occupied.
- Embarked at Ardrrossan on the 18th July, and landed at Granton on the 29th, both days inclusive.
- § 3.—1858.
- On the 17th May a Committee, consisting of—
Adam Urquhart, Esq.
E. D. Sandford, Esq.
John Christison, Esq.
Geo. Dingwall Fordyce, Esq.
- proceeded to St. Abb's Head to meet a deputation of the Elder Brethren, in order to fix the site of the lighthouse. They returned in the evening.
- The Committee of the Commissioners which had been appointed for this year were under the necessity of deferring their visit, in consequence of the "Pharos" requiring some repairs, and other circumstances which prevented her starting till it was too late for the Committee.
- IX. VI. Copies of standing orders for the guidance of general and other meetings.
- Already given with the General Return for Lighthouses.
- XIII. VII. Detailed account of the system employed in conducting the financial department of the establishment, showing—
- (1.) How and where the moneys received for lighthouses, buoys, and beacons are retained pending the process of final transmission; and,
 - (2.) The mode adopted for maintaining and dispensing the current and ordinary expenses, and meeting bills for builders, &c. &c.
1. The collectors of customs in each port are authorized to collect light dues, as per certificate produced. They grant bond to the Queen for their intronmissions, including the light dues.
 - No dues are received by the Commissioners for Beacons and Buoys.
- The Commissioners issue to the collectors light bills (in the form No. 2). These are contained in books of 20, 50, and 100 each, and are numbered continuously in each book. The counterpart, it will be observed is numbered the same as the light bill. The counterparts are returned quarterly; and any number being awaiting, must be accounted for, or an immediate inquiry follows. Collectors are required to remit whenever they have 100*l.*, or once a week; and for this purpose, a book of remittance bills is furnished to them at each port on the Form No. 3. These remittance bills, it will be observed, are made payable to the bankers of the Commissioners in Edinburgh, but are sent through the secretary, who enters them as cash, and sends them on to the bankers. The bankers enter these in a "Revenue Account," from which periodical remittances are made to the Paymaster General, conform to letter, No. 4. It will thus be seen that no officer of the Board receives any cash arising from revenue. The collectors render their accounts in full once a quarter (see Forms, Nos. 5, 6, 7, 8). These are checked by the board's auditor regularly as received.
2. The paymaster general, on requisition from the Commissioners, impresses money into their hands to meet the disbursements (see letter, No. 9). This money is paid by the Commissioners to an account kept by the bankers called the "Disbursement Account." From this account the Commissioners give the secretary temporary advances to meet the payments falling due. The drafts on the account are signed by the secretary, and countersigned by two Commissioners. The mode in which payments are made by the secretary, extending in sums of all amounts and payments, all over Scotland, is, in general, by issuing receipts in the Form No. 10 to the parties, with an authorisation in the corner, signed by the secretary, which is considered equivalent to a letter of credit.
- Tradesmen's accounts are rendered in specific forms (given with General Lighthouse Return, Answer to Query XXIII., No. 13), and are paid in a similar manner. They are all checked by the accountant of the Board, and subsequently pass through the Audit Office, in London. Accounts for new works are paid in a similar way, with the addition of a certificate from the engineer of the amount being due.
- The Commissioners render their accounts quarterly to the Board of Trade. Forms of these have been given with the General Lighthouse Return.
- VIII. Names, ages, dates of appointment, and salaries of establishment.
1. Alexr. Cunningham (54), secretary and cashier, entered as clerk 1st January 1826, appointed joint secretary 8th January 1842, and principal secretary in 1846, and secretary, cashier, and general manager 1855. Salary 900*l.*
 2. George Steuart (37), accountant, entered the service in January 1847. Salary 290*l.*, to rise 10*l.* a year to 300*l.*
 3. John Sherar (58), book-keeper and sub-cashier, entered the service 18th August 1828, and appointed engineer's clerk and book-keeper and sub-cashier in 1851. Salary 250*l.*
 4. George Piggott (56), senior clerk, entered the service as clerk to the accountant in 1837, promoted to his present situation in 1855. Salary 150*l.*
 5. James Murdoch, jun., (24), second clerk, entered the service 26th December 1849. Salary 90*l.*, to rise 5*l.* per annum till it reach 100*l.*
 6. William Laurie Barbour (24), third clerk, entered the service 11th November 1851. Salary 70*l.*
 7. John Sherar, jun., (18), junior clerk, entered the service 1st July 1858. Salary 50*l.*, to rise 10*l.* per annum till it reach 60*l.*
 8. David Scott (59), superintendent of lightkeepers, entered the service in March 1849. Salary 240*l.*, to rise 10*l.* per annum till it reach 250*l.*
 9. Peter Hume (37), foreman of lighthouse repairs, entered the service 24th October 1855. Salary 170*l.*, to rise 10*l.* per annum till it reach 200*l.*
- The time of the above officers is entirely occupied in the business of the Lighthouse Board, and their salaries are wholly chargeable to the lighthouse funds.
- IX. Mode of selecting and appointing these officers. X
- By a majority of the votes of the Commissioners.
- X. List of persons in receipt of pensions for superannuation in 1857 and 1858, their ages, date of superannuation, and reason for placing on list.

XI. Gross income and expenditure for 1857 and 1858.

1. Gross amount of income from light dues in 1857	£ 30,412 13 5
Miscellaneous receipts	168 1 8
	<u>£30,580 15 1</u>
2. Gross amount of income from light dues in 1858	26,330 3 3
Miscellaneous receipts	534 10 4
	<u>£26,864 13 7</u>
Expenditure in 1857	£ 62,203 16 1
Ditto in 1858	59,746 15 3

The mode of audit is by examination and checking of each individual account.

The name of the auditor is George Steuart, the accountant of the Board before named.

By order of the Board.

ALEX. CUNNINGHAM,
Secretary.

Edinburgh,
22nd Sept. 1859.

(It was thought that these papers were too voluminous to print.)

Royal Commission, Lights, Buoys, and Beacons,
7, Milbank Street, S.W.

17th June 1859.

SIR,—WITH reference to my letter of the 3rd instant, I am directed to state that the Commissioners desire to be furnished with a Return showing,—

XIII. The names of the various local agents and superintendents of districts, the dates of their appointments, their profession or employment at the time of their appointment, the salaries and allowances paid to each.

The Commissioners also desire to be furnished with a Return showing,—

XIV. The number of craft of all denominations maintained by the Commissioners of Northern Lighthouses in the several districts under their control. XVIII.

XV. The number of men employed in such boats or vessels. And, XIX.

XVI. The whole sum expended in Salaries and in maintaining the same. And, XX.

XVII. Also the expense incurred in each year since 1853 in the hire of boats, vessels, &c. XXI.

I am, &c.

(Signed) J. F. CAMPBELL,
The Secretary to the Commissioners of Northern Lighthouses. Secretary.

RETURN, &c.

XIII.—“Local Agents.” XVIII.

The Commissioners of Northern Lighthouses do not employ any local agents or superintendents of districts.

XIV.—Craft of all Denominations maintained by the Commissioners. XVIII.

XII. Detailed amount of expenditure for same periods, mode of audit, and names of auditors.

This detail is given in separate Forms, seventy-two in number, sent herewith (from these the following abstracts have been made):—

DISBURSEMENT ACCOUNT under the Act 16 and 17 Vict., Cap. 131, paid in the Four Quarters ending 31st December, 1857.

	£ s. d.
Maintenance of lighthouses as per Abstract A.	16,669 11 2

SCOTLAND.
Circular I. Question XVIII.

XVI.

CONSTITUTION OF GENERAL AUTHORITY, &c.

XVII.

1. "Pharos," paddle steamer, 250 horse power, 300 registered tonnage.
2. Argyll, Skerryvore, attending vessel, 17 tons.
3. Attending boat Inck Keith.
4. Do. Isle of May at Crail.
5. Do. Bell Rock.
6. Do. Pentland Skerries.

XV.—The Number of Men employed in such vessels.

1. The crew of the "Pharos" consists of—
Master.—Two mates.—Steward.—Two engineers.—Six firemen.—Two coal trimmers.—Eleven seamen.—Carpenter.—Coxswain.—Boatswain.—Cook.—Assistant cook (boy).

2. The crew of the "Argyll" consists of—

Master.—Mate.—Carpenter.—One seaman.

3. The boat for attending Inck Keith is under the charge of a boatman, who employs his own crew, and who, previous to 1856, was paid 8s. per trip, but since then, in order to give his whole time and assist in the storehouse a Granton, receives a salary of 40l. per annum.

4. The boat for attending the Isle of May lighthouse is under the charge of a boatman, who has a salary of 35l. per annum, with a free house. In attending the lighthouse he employs men as circumstances may require, who are generally paid 2s. 6d. per trip.

5. The boat belonging to the Commissioners for attending the Bell Rock lighthouse is under the charge of a boatman who employs a crew and charges by the trip.

6. The boat belonging to the Commissioners for attending the Pentland Skerries lighthouse is under the charge of a boatman, who employs a crew and charges by the trip.

7. At the following fifteen island stations the use of boats are required for supplying the lightkeepers with provisions and other necessaries, but these boats belong to the person in charge of them, who visits the lighthouse as occasion requires, and is paid by the trip. These stations are, Hoy Sound, North Ronaldsay, Whalsey Skerries, North Unst, Cape Wrath, Island Glass, Barrahead, Rona Kyleakin, Lismore, Rhynns of Islay, Ship Rock of Sanda, Pladda, Little Ross, and Calf of Man.

XX. XVI.—The Expense of maintaining the same since 1853.

CONSTITUTION OF GENERAL AUTHORITY, &c.

XXI.

SCOTLAND.

Royal Commission, Lights, Buoys, and Beacons,
7, Millbank Street, S.W., London,
17th June 1859.

Northern Lighthouse Office,
Edinburgh.

Circular
I.
Question
XXV.

Sir,—With reference to my letter of the 3d instant, I am directed to state that the Commissioners desire to be furnished with a return showing the names of all lighthouse keepers and masters of floating lights appointed since the 1st of January 1854, the date of their appointment; their profession or employment at the time of their appointment; their ages at the time of appointment; their actual employments when appointed; by whom they were selected, and the mode of examination (if any) and of testing their qualifications.

Sir,—The Commissioners of Northern Lighthouses have received an application for your admission to their service as a lightkeeper; and I am directed to enclose a List of Queries, which you will return to me at your earliest convenience, with answers filled up in your own handwriting.

I am, &c.

Secretary.

I am, &c.
(Signed) J. F. CAMPBELL, Secretary.
The Secretary Commissioners of
Northern Lighthouses, Edinburgh.

Queries to be answered by every Candidate for admission to the Lighthouse Service, as a Light-keeper.

1. What is your full christian name and surname?
2. Where were you born, and the date?
3. Are your parents alive, and where do they reside?
4. What is your present employment, and the name of your employer?
5. In what, and whose employments have you previously been?
6. Where were you educated?
7. What branches were you taught?
8. Have you any certificates from your schoolmaster? If so, transmit them.
9. What is the present state of your health?
10. Have you ever been subject to spitting of blood, rupture, or to any fits, or had any severe illnesses? If so, give the name of the doctor who attended you.
11. Have you ever been subject to any complaint in your eyes, or affection of your eyesight? Can you distinguish colours?
12. Are you at all near-sighted, or is your eyesight in all respects perfectly good?
13. Are you aware (and if not, on being admitted to the service, do you agree) that your engagement with the Commissioners will be from day to day during their pleasure, that on cause shown you may be instantly dismissed, and that you in that case are to have no claim for wages, past, or future, beyond what may have been paid to you at the previous quarter?
14. Are you aware of the arduous and very responsible nature of the duties of a light-keeper, and that it requires great resolution and steadiness to discharge them?
15. Are you aware (and if not, on being admitted, do you agree) that you have agreed to take watch in the light-room, and that on your going to sleep while on duty, or that on any neglect or want of vigilance on your part, by which the light may be extinguished, or its due exhibition may be endangered, you will be instantly dismissed from the service?
16. Are you willing, and on being admitted, do you agree, to give implicit and constant obedience to the principal light-keeper under whom you may be appointed to serve, and to your superiors in all matters connected with the service, and to attend to all instructions which may be given to you?
17. Are you aware (and on being admitted, do you agree), that you must go to whatever lighthouse station the Board may name, and subsequently to any other station which they may direct, on a change being considered right, and that a refusal on your part to go to such station will subject you to instant dismissal?
18. Are you married or single?
19. If married, how long have you been so, and what family have you?
20. How long have you known Mr. _____, who forwards your application to the Board?

I am, &c.

Note.—The Commissioners keep no record of the employments of their lightkeepers.

XIII. XIX. Master of Floating Lights.

Nil.

XX. By whom appointed.

The Commissioners of Northern Lighthouses.

XV. XXI. Mode of Examination and testing.

When an individual applies for admission into the service, he is required to fill up the Schedule No. 1 herewith produced, and the party recommending him, the Schedule No. 2. If he is admitted, his name is then placed on the list of Applicants, and the Letter No. 3 is sent to him.

In his turn he is sent for three months education in the duty of a lightkeeper, one half to a catoptric, the other to a dioptric lighthouse, according to the accompanying forms of letters, No. 4 to the candidate, and No. 5 to the lightkeepers; and, if they certify favourably of him, his name is then transferred to the "Expectant" list, from which, in his turn, he is drafted into the service according to letter No. 6.

No person is appointed a lightkeeper under 21 or above 30 years of age.

When a lightkeeper is admitted his life is insured by a policy taken in name of the Commissioners (3*l.* being retained for this purpose from his salary) and he receives a copy of the circular No. 7.

Edinburgh, 7th July 1859.

By order of the Commissioners.

ALEX. CUNINGHAM, Secretary.

I, _____, applicant for admission to the service of the Commissioners of Northern Lighthouses as a light-keeper, do hereby declare that I have inserted, with my own hand, answers to the preceding queries, and that I am willing and bind myself to serve the said Commissioners faithfully, under the conditions above set forth.

Question
XXV.

Queries to be answered by any one recommending the admission of a Light-keeper into the Lighthouse Service.

1. Have you any knowledge of the candidate whom you recommend?
2. How long have you known about him?
3. What is his present employment, and the name of his employer?
4. Has he been previously employed under any other person?
5. How has he conducted himself in such employment?
6. Is he sober, honest, obliging, obedient to authority, and clearly in his dress and person?
7. Do you know the parents of the candidate, and what character do they bear? How long have you known them?
8. When did you last see the candidate, previous to forwarding your recommendation?
9. Is he able-bodied, of a healthy constitution, and free from any deformity of body?
10. Is his eyesight good and free from any defect? Is he near-sighted?
11. Do you know whether he, his parents, or any of his near relations, have ever displayed any symptoms of insanity or eccentricity of character?

Date

Northern Lighthouse Office,
Edinburgh.

Sir,—Having laid before the Commissioners of Northern Lighthouses your application to be admitted to the service as a light-keeper. I have to inform you that your name has been placed on the list of candidates, until your turn shall come to be sent for instruction in the duties of a light-keeper.

When your turn does come, of which you will receive due notice, you will require to be three months from home, which will be divided equally in attendance for instruction at two lighthouses with different species of lighting apparatus. If, during the term of residence there, your conduct be satisfactory, both in acquiring instruction and in your general demeanour, of which intimation will be sent to the Commissioners, your name will be transferred from the list of candidates to the list of "expectant light-keepers." From this list, as vacancies occur, you will, when your turn comes, be appointed as assistant light-keeper, and your station named.

If your conduct, while under instruction, be such as to warrant your name being put on the expectant list, as above, you will be allowed your travelling expenses to and from the stations; but no wages for the time you are under instruction. Should you fail in getting your name put on the expectant list, you must distinctly understand that you will receive no allowance whatever.

Please acknowledge receipt of this letter.

I am, &c.,

Secretary.

Northern Lighthouse Office,
Edinburgh.

Sir,—With reference to my letter of intimating that the Commissioners of Northern Lighthouses had placed your name on the list of candidates for admission to the service as a light-keeper, I have now to acquaint you, that your time has come for being sent for instruction, and you will require to come here as soon as possible, when you will receive further directions.

I have to refer you to my previous letter, as to the terms on which you will be allowed your travelling expenses. You must keep a full and particular note of all these travelling expenses, in the form of which a copy is enclosed. Should you have occasion to pay out any sums for cart hire, carriage of extra luggage, &c., you must be careful to get *ouchers* for the same, and transmit them to me, along with your account. You will be allowed second-class fare in railways, and second-class fare in steamers, and 4s. 6d. per day, for board and lodging, while travelling.

Acknowledge receipt of this letter, and state what day you may be expected here,

I am, &c.,

Secretary.

Northern Lighthouse Office,
Edinburgh.

Sir,—I am directed by the Commissioners of Northern Lighthouses to send to you the bearer

in order that you may duly instruct him in the duties of a light-keeper, during six weeks from the date of his arrival, in conformity with the Board's rules, of which a copy is annexed.

He will board with you, for which you will be allowed the authorized rate of charge.

I am, &c.,

The Principal Light-keeper
at

Secretary.

RULES to be observed in educating Applicants for Admission into the Lighthouse Service.

1. After the arrival of the learner, who will in every case bear a letter of authority from the secretary, it is the first duty of the principal light-keeper to call his attention to the light-keeper's instructions—particularly cautioning him as to the responsibility he is undertaking, and the *invariable rule* of the Commissioners, that if he goes to sleep at his post, he will not be admitted to the service.

2. The usual period for instruction, unless otherwise ordered, is to be six weeks at a lens light, and six weeks at a reflector light. During these respective periods, the learner will be instructed in the full duties of the light-room, and in the whole duties to be performed by a light-keeper generally, as well in relation to other parts of the premises as in the lightroom.

3. When at a lens lighthouse station, he must, in addition to his general duties, be specially instructed in the management of the lamp, in trimming the wicks, in removing the leather valves of the pumps. Also in cleaning the lenses and mirrors.

4. When at a reflector lighthouse station, he must, in addition to the general duties, be specially instructed in the cleaning of the reflectors, the trimming and management of the lamps.

5. He must be fully instructed to keep the journal, and other books of the establishment which may be in use during his stay at the station. For this purpose he should be directed to make the entries in them, to read off the barometer and thermometer and rain gauge, and enter the same.

6. He should in every case be called upon to write, if not the whole, at least a portion of the monthly return, transmitted to the secretary during his stay, so that a specimen of his handwriting may be seen at head quarters.

7. He must be cleanly in his dress, sober, active, and attentive, and conform in all respects to the principal light-keeper's instructions.

8. It is desirable that, during the first four weeks of his attendance, a learner should keep watch along with the principal light-keeper.

9. During the two last weeks of his attendance, he may keep watch either along with the principal or assistant light-keeper, as may be arranged, but during these two weeks he is to do the whole duties of the lightroom during his watch,—the light-keeper attending to aid or advise him in case of any difficulty.

10. It is to be distinctly understood, that at no time is the lightroom to be left under the charge of a learner, without the attendance of one of the light-keepers who will be held responsible for any defect which may occur, in the due maintenance of the light, from the neglect or inadvertence of a learner under instruction.

11. If any neglect of duty, disobedience of orders, or of these instructions, or any disrespectful or irregular conduct, occurs on the part of a learner, during the period of his instruction, the same is to be forthwith reported to the secretary.

12. If, at the expiration of the period of his instruction, the principal light-keeper has reason to be satisfied with the learner's proficiency and general demeanour, he shall transmit a certificate to that effect, as nearly as circumstances admit, in the terms annexed, by post to the secretary in Edinburgh. If not considered in any respect qualified, the certificate must be altered accordingly.

13. Upon receipt of this certificate, the principal light-keeper shall be entitled to a fee of 1*l.* 1*s.*, and the assistants to a fee of 10*s.* 6*d.* each.

Lighthouse.

Sir,—I hereby certify that _____ has resided for _____ days at this lighthouse, during which time he has been fully instructed in the whole duties of a light-keeper, in terms of the Board's directions in that behalf, and I consider him duly qualified to take charge of a light, as assistant light-keeper; I have also to certify, that during his stay he has been at all times attentive to his

XXI.

CONSTITUTION OF GENERAL AUTHORITY, &c.

instruction, cleanly, sober, and respectful, and I have every reason to be satisfied with his general demeanour.

I am, &c.,

Principal Light-keeper.

To the Secretary,
Northern Lighthouse Office,
Edinburgh.

Northern Lighthouse Office,
Edinburgh,

Sir,—Having received from the principal lightkeepers in charge satisfactory certificates of your progress while under instruction, and of your general conduct while at the light-house stations, I have to inform you, that the Commissioners of Northern Lighthouses have placed your name on the list of "expectant lightkeepers," from which you will be called into the service as assistant lightkeeper, when a vacancy occurs; and you will then be required to give a statement of your occupation from this time.

Should you, when a vacancy is intimated, be engaged in any employment which prevents your accepting your appointment, you will be passed over, and receive, on the next vacancy a second intimation; but should you then decline to accept, your name will be struck off the list.

If you should attain the age of thirty before an opening occurs, your name will be struck off the list.

I am, &c.,

Secretary.

Northern Lighthouse Office,
Edinburgh,

Sir,—With reference to your appointment as a light-keeper, recently made by the Board, I am directed to acquaint you, that although your salary is 40*l.*, yet that the sum of 3*l.* will in each year after 12th November next be retained by half-yearly instalments, for the purpose of repaying an annual premium for an insurance on your life, under the regulations, of which a copy is annexed.

The quarterly payments of salary will therefore be made to you as follows:

Quarter ending 1st January	- - -	£10 0 0
" " 1st April	- - -	8 10 0
" " 1st July	- - -	10 0 0
" " 1st October	- - -	8 10 0
		37 0 0

In pursuance of this arrangement, I have now to acquaint you that a policy has been taken out from the Edinburgh Life Insurance Company for the sum of *l.* payable after your death. The policy, which is in the name of the Commissioners, is dated , and N^o , and is delivered to me to be retained for your behoof.

In making this intimation to you, I am directed to call your attention in a particular manner to the regulations. The sum contained in the policies, you will observe, falls to be paid after your death to the Commissioners, in whose name the policies are taken; and as the money is to be applied by them, it is very desirable that you should leave some written directions behind you as to the manner in which you would wish the money disposed of for behoof of your family. This may be done in the simplest manner, either by a letter addressed to the secretary of the Board, to any member of your family, or to any friend, which, after being written and signed, should be laid aside in your repositories, where it may be found after your decease.

By order of the Board,

Secretary.

To Assistant light-keeper
at

REGULATIONS as to Insurance on Keepers Lives.

1. That the addition made to the salaries of the lightkeepers by Minute of 5th February 1839 shall in no event be payable to or assignable by any keeper, or attachable by his creditors.

2. That this addition made to the keepers' salaries shall, as heretofore, be employed in paying an annual premium on a policy of insurance on their respective lives, for such a sum as can be obtained for such premium, in reference to the age of the party insured; the policy of such insurance to be taken in name of the Commissioners, and the sums contained in them to be payable to the Commissioners after the death of the keeper.

3. That it shall be competent to every light-keeper, at any time during his life, by any writing under his hand, either in the form of a letter to the secretary, or otherwise, to direct in what manner he would wish the sum arising from his policy of insurance, at his death, to be applied for

II.

SCOTLAND.

Circular I.
Question
XXV.

the benefit of his wife and family; but it is to be understood that the Board consider it inexpedient that in any case they should retain the sum coming into their hands for behoof of such widow or family; and that in the event of no written directions being left, the Board will apply such sums for behoof of the widow or family, one or both, at their discretion, in such way as they may think most beneficial, without having regard to the manner in which such sums might fall to be divided at common law.

4. That in the event of no such directions for behoof of the widow and family being left by the keeper, the policies, and sums arising from them, shall be held by the Board exclusive of the creditors or other assignees of the deceased keeper, the object being to provide a fund to the widow and family, where such are left.

5. That in the event of any keeper being at any time dismissed from, or leaving, the service of the Board, he is to have no claim on the policy, nor for the annual premiums paid, nor for its value,—the same, in that case, being entirely at the disposal of the Board; with power to them, nevertheless, if they shall see cause to give up the policy to the party dismissed or leaving the service, or to his family, or to give its value, or otherwise to dispose of it.

6. That in the event of any light-keeper dying, and leaving no wife and family, the Board will still apply the sums coming into their hands in terms of any written directions he may leave; but failing such, and his dying intestate, the Board will leave the insurance office to settle with his next of kin according to the usual forms of law.

7. That from the salary of every light-keeper, hereafter entering the service, a sum of 3*l.* shall be retained annually to effect an insurance on his life, subject to the above conditions.

XXVI. SUPPLEMENTARY RETURN of improvements suggested to the Commissioners of Northern Lighthouses, with a statement of the steps taken. (Original return pre-fixed to volume of drawings furnished by the Commissioners.)

XXVI.

1. Gerard's reflector.—8th June, 1846.—Letter from Sheriff Lumsden, recommending an inquiry into the merits of Gerard's reflector, and enclosing a letter from the provost of Aberdeen with a sketch of the lantern, &c.

10th May, 1847.—Letter from Mr. Gerard enclosing report of shipmasters in favour of his reflector.

13th May, 1847.—Answer by engineer (Alan Stevenson, Esq.) saying, he sees nothing to encourage Mr. Gerard prosecuting his experiments.

May, 1848.—Further correspondence from Mr. Gerard, urging merits of his reflector.

3d June, 1848.—Letter from Alan Stevenson, Esq. to Mr. Gerard, saying, he would endeavour to have a conference with him.

June, 1848.—Letter from Alan Stevenson, Esq. to the Commissioners of Northern Lighthouses proposing to test the reflector in comparison with a lens-light.

7th June, 1848.—Meeting, "authorise Mr. Stevenson to meet Mr. Gerard, to institute comparative trials of the reflector, incurring such expense as he might think reasonable in relation thereto, and to report the result to the Board."

20th and 26th September, 1848.—Letters from Alan Stevenson, Esq. to the Commissioners as to expense of instituting comparative trials.

18th October, 1848.—Meeting authorised the sum of 100*l.* to be placed at the disposal of the engineer for this purpose.

December, 1848.—Engineer reports (annual report for 1848-9) that he has made arrangements for a trial of the light in contrast with that of Coveasa Skerries.

16th July, 1849.—Letter from Alan Stevenson, Esq., enclosing a note from Mr. Gerard regarding first trial of the heat reflector.

1st October, 1849.—Report by the engineer decidedly in favour of the lens light at Coveasa.

3rd October, 1849.—Meeting direct no further experiments to be made.

11. Herbert's lamp for colza oil.
6th May, 1847.—Letter from Mr. Herbert of the Trinity House, regarding his new lamp for Colza. Remitted to engineer to report upon.

8th June, 1847.—Report by engineer stating that Mr. Herbert's lamp and that used by the Commissioners had been carefully experimental

upon, and suggesting that a dozen of Mr. Herbert's burners should be procured with a view to test by actual trial in a lighthouse.

December, 1848.—Annual report, 1848-9, after a year's trial at the Bell Rock. The engineer does not recommend the lamp to be adopted.

III. Voltaic light.—23rd November, 1848.—Letter from engineer to the Commissioners in reference to Straite and Petrie's voltaic light, smallness of luminous point, a defect which he fears could not easily be remedied, directed to correspond with inventor as to instituting a trial.

December, 1848.—Engineer reports (annual report 1848-9) that he has had some correspondence regarding this light, but is not yet in a position to make any proposal as to a trial of the light.

IV. Illuminated numerals.—10th June, 1850.—Letter from Alan Stevenson, Esq. to the Commissioners regarding Mr. Meek's system of numerical lights. Experiments proved that these numerals (25 inches high by about 16 inches wide) could be identified at fully 1000 yards distance. Whether these distances should warrant their exhibition to the mariner, he could not, under the present state of his information, determine.

21st November, 1851.—Letter from Mr. Babbage with notes explanatory of his system of distinguishing lights by numerals, &c. Remitted to engineer to report.

6th December, 1851.—Report by engineer to the effect that power is of more importance than distinction in lighthouses, and as the northern lighthouses are sufficiently distinguished in character already, it is not expedient to adopt Mr. Babbage's system, as it would have the effect of greatly sacrificing power to distinction.

24th December, 1851.—Letter to Mr. Babbage stating that the Commissioners do not deem it expedient to adopt his system.

11th November, 1852.—Letter from Messrs. Stevenson, engineers to the Board, enclosing letter from Professor Bache of American lighthouse Board, requesting a copy of the report on Mr. Babbage's plan.

17th November, 1852.—Meeting authorise a detailed statement to be sent to the American Board.

29th January, 1853.—Statement sent embodying the reasons why the Commissioners rejected Mr. Babbage's system.

1st March, 1853.—Letter from American Board acknowledging receipt with thanks.

21st December, 1855.—Secretary "authorised to communicate to the hydrographer of the "Admiralty a copy of the Commissioners report "on Mr. Babbage's plan for distinguishing light-houses."

29th December, 1855.—Letter from Captain Washington thanking Commissioners for their report.

V. Electric light.—15th June, 1853.—Engineer submitted to the meeting a pamphlet on the electric light, as to which he had been making some inquiries. Meeting direct him to continue his inquiries. Report.

16th June, 1853.—Letter from patentee (Dr. Watson) of new electric light, explaining process of exhibition, expenses connected therewith, &c.

27th June, 1853.—Report by engineer as to its merits, and stating that the Trinity House had remitted the subject to Professor Faraday to report thereon, but at present there are two objections to its adoption, viz., the smallness of luminous point of light, and its enormous expense in comparison with oil.

Proceedings delayed till Mr. Faraday's report is known.

December, 1853.—Engineer reports (annual report 1853-4) that owing to above reasons, it cannot in its present state be adopted with advantage.

VI. Improvement in lighthouses.—10th February, 1855.—Letter from Mr. W. Fletcher, Cald, Irnby, Wales, suggesting improvements in the construction of lighthouses.

23d February.—Written to, to send his plans.

28th March.—His plans submitted, and declined to be adopted, as they contained nothing new.

REPORT as to EXPERIMENTS ON RED LIGHT, by Messrs. D. and T. Stevenson, Engineers to the Board.

The characteristic colour of first class dioptric red lights, such as Sanna and Ushenish, has hitherto been produced by placing frames containing red glass within the windows of the lantern. This arrangement has certain disadvantages. One of these is that the light has to pass through the additional surfaces of the red shade; another and more serious evil is, that in consequence of the close proximity of the red shades to the window glass of the lantern, and the consequent want of sufficient ventilation between them, it is found that in certain states of the temperature and atmosphere, condensation takes place on their inner surfaces, a film of moisture is formed, and the light is materially absorbed in passing through these dim surfaces. In order to remedy this defect, we proposed to Messrs. Chance, of Birmingham, to colour the thick plate window-glass of the lanterns; but this was stated to be impracticable, as the glass of which the window panes are formed is cast, and a thin film of red glass cannot be incorporated with it, and being plate-glass it cannot be stained. Ruby glass on the other hand, which is all blown, cannot be made more than $\frac{3}{16}$ of an inch thick, and is, therefore, too thin to be used for glazing lanterns. Our next proposal was to colour the large chimnies used for the first-class four wick'd lamps. The red colour of catoptric lights from reflectors, with small argand burners, has long been produced by using red chimnies; but the same plan, so far as we are aware, has not yet been employed for the large chimnies used in first-class dioptric lights.

Some difficulties occurred in manufacturing the red chimnies for the large lamp, and we communicated on the subject with Mr. Ford, of Edinburgh, and Messrs. Chance, of Birmingham, both of whom submitted specimens of their work. Messrs. Chance, after several trials, ultimately succeeded in making glasses of good colour and at a moderate cost. In order to test the efficiency of these chimnies as compared to the shades at present in use, and other suggestions for effecting the object in view, we instituted a series of experiments which we may briefly explain.

A first-class wick'd mechanical lamp was placed in the experimental lightroom at Inchkeith, in the focus of an annular lens, which was directed towards the Calton Hill, distant about 5½ miles; and the following coloured media were exhibited in succession:—

- 1st. A large red shade interposed between the lens and the pane of the lantern; the arrangement hitherto in use.
- 2d. A small red shade interposed between the lens and the lamp.
- 3d. A cylinder, 12 inches in diameter, and 32 inches in length, placed outside the chimney of the lamp.
- 4th. A coloured chimney of flashed ruby glass of pink colour (the tint produced by gold.)
- 5th. A coloured chimney of homogeneous ruby glass of bright red colour (the tint produced by gold.)
- 6th. A coloured chimney of homogeneous glass of dark red colour (the tint produced by copper.)

These different shades and chimnies were exhibited twice on each evening for three successive nights, the order in which the apparatus was used being on each occasion altered and not known to the observers. The lights were observed on the first night by two, and on the two last nights by three independent observers stationed on the Calton Hill and Royal Terrace, the whole number of independent observations being 16 on each light.

A careful review of these observations shows that the characteristic of a first class dioptric red light can be secured by the use of the red chimnies which Messrs. Chance have succeeded in manufacturing, and that the disadvantages attending the use of the red shade, consequent on the transmission of the light through an additional pane of glass, and the condensation may be avoided; a very important improvement on the present system. The following is the result of the observations made, the different kinds of ap-

CONSTITUTION OF GENERAL AUTHORITY, &c

XXVI.

SCOTLAND.
Circular I,
Question
XXVI.

paratus experimented on, being set down in their order, number 1 being the best red light—
1st. Chimney of homogeneous gold ruby glass (bright red.)
2d. Chimney or flashed gold ruby glass (pink colour.)
3rd. Red shade between lens and lantern panes, the same as now in use.)
4th. Red shade, between lens and lamp.
5th. Red cylinder outside of lamp chimney.
6th. Chimney of homogeneous glass, dark red, (tint produced by copper.)
Of these Nos. 1 and 2 were the best lights; 3 and 4, were also good lights, but not equal to the first; Nos. 5 and 6 were decidedly inferior, particularly as regards size.
We have, therefore, to recommend to the Board to order a year's supply of glasses of the tint and

quality referred to in No 1.; and that they should be tried in Ushenish lighthouse. It is worthy of remark that the flashed glasses No. 2, which are made by introducing a thin film of ruby glass between two films of colourless glass, and which we feared might not stand the heat, were found to stand quite as well as those which were made of homogeneous glass.
We think it would also be desirable to follow out this suggestion by getting some of the small argand chimnies made of homogeneous ruby glass to be tried in a reflector, and compared with the chimnies now in use, which are stained by a very tedious process, and are more costly than the homogeneous glasses would be.
(Signed) D. and T. STEVENSON.
Edinburgh, 20th March, 1860.

CIRCULAR No. II.—LIGHTHOUSES.—GENERAL RETURN.

Circular II.

- I. The Commissioners of Northern Lighthouses, Edinburgh.
- II. Chart, with list sent. Special Returns to be sent.
- III. The Commissioners refer to Mr. Stevenson's Rudimentary Treatise on Lighthouses, Part II., p. 155, as embodying the general principles founded on the experience of the Board.
- IV. Should not, if possible, exceed 200 feet, but 150 feet is sufficient under almost any circumstances to give the range required. This, however, is controlled by each locality. See Rudimentary Treatise, p. 156.
- V. Catoptric, dioptric, catadioptric, holophotal, azimuthal-condensing, apparent.
- VI. Visibility, and distinction from adjoining lights, and the adoption of such apparatus as in each situation will secure economy combined with the best effects that can be produced from the flame.
- VII. Fixed, revolving, flashing, intermittent, double lights, revolving alternate colours.
- VIII. See Mr. Stevenson's Treatise, p. 155, et seq.
- IX. Sent.
- X. See below.

- XI. All stores are supplied by open contract, conform to samples exhibited, and they are tested by examination on receipt into the store. The oil is tested by samples furnished anonymously previous to opening offers, and the tests are burning, freezing, photometrical observations, (vide Treatises, p. 177), and chemical analysis.
- XII. From the uncertainty of estimating correctly the direction of sound, no fog signals have been used by the Board, excepting in the cases of Bell Rock and Skerryvore, where bells are tolled by the machinery of the revolving light every half minute, simply with the view of indicating to vessels the proximity of danger, and putting them on their guard.
- XIII. None.
- XIV. Nature and dates of any memorials or applications for lighthouses on new or old sites, since January 1845, and nature and dates of replies.

St. Abbs Head.

* See the Drawings furnished in Answer to No. XI. of this Return.

- 1. 31st December, 1857.—Letter to Board of Trade as to wreck of "Martello," &c. on the Carr Rock, and suggesting Fitness and St. Abbs Head as suitable sites for lighthouses to guide vessels into the Firth of Forth.
- 2. 18th January, 1858.—Answer from Board of Trade stating that proposal ought to have come through the Trinity House, and that they are not prepared to sanction a light on Finess.
- 3. 23d January, 1858.—Reply from Commissioners, stating that they will cause Messrs. Stevenson to make a survey, &c.
- 4. 27th January, 1858.—Answer from Board of Trade, stating that Commissioners should not in the first instance direct a survey to be made, but should, from ample materials already in their possession make the proposal to the Trinity House for such lights as they think desirable.
- 5. 4th February, 1858.—Reply to the Board of Trade, stating that the Commissioners had no materials, and would require a report from Messrs. Stevenson.
- 6. 23d February, 1858.—Letter from Board of Trade, stating that a Committee would visit the locality.
- 7. 8th March, 1858.—Letters to Trinity House and Board of Trade, transmitting copies of previous correspondence.
- 8. 24th March, 1858.—Letter to Board of Trade, still desiring sanction to survey.
- 9. 28th April, 1858.—Letter to Board of Trade, stating that a deputation of the Commissioners, with Messrs. Stevenson, will be ready to receive the Elder Brethren, as to a light in Frith of Forth.
- 10. 29th April, 1858.—Letter from the Trinity House, giving date of the intended visit to St. Abbs Head.
- 11. 19th May, 1858.—Committee reported on the meeting which had taken place at St. Abbs Head on the 17th instant, and resolved to erect a lighthouse on St. Abbs Head.
- 12. 19th May, 1858.—Letter to Trinity House for sanction.
- 13. 26th May, 1858.—Answer from Trinity House, conveying sanction.
Lighthouse now in course of erection.

Oxcares.

1. December, 1847.—Memorials from ship owners, &c. of Grangemouth, Alloa, Kincairdine, and Borrowstowness, as to a light on Oxcares, remitted to engineer.
2. 6th December, 1847.—Letter from Chairman of Forth and Clyde Navigation Company, regarding the above memorial, and urging the importance of a light. Remitted to Engineer.
3. 20th February, 1849.—Letter from John Laing, desiring to know on part of Memorialists if a lighthouse is to be erected.
4. 22d February, 1849.—Answer, stating that the finances will preclude the erection of lighthouses for some time.
5. 25th September, 1855.—Letter from John Laing, urging the necessity for a light.
6. 10th November, 1855.—Answer, stating that this matter had been under the notice of Government, and for the present there was no prospect of work being undertaken.

Fifeness.

1. 31st December, 1857.—Letter to Board of Trade, adverting to loss of two steamers, Fifth of Forth, last year, and pointing out practicability of a lighthouse on Fifeness.
2. 18th January, 1858.—Answer from Board of Trade, stating that proposal ought to have come through the Trinity House, and that they are not prepared to sanction the proposed light on Fifeness.
3. 23d January, 1858.—Reply by Commissioners, stating that my Lords have misapprehended purport of their letter, what they suggested was, that a survey should be obtained with a view of obtaining probable cost of lighthouse.
4. 27th January, 1858.—Answer from Board of Trade, stating that Commissioners should not incur expense of a survey which might turn out to be entirely useless until they have received sanction of Trinity House to erect a lighthouse.
5. 4th February 1858.—Reply by Commissioners, stating that they have no materials to enable them to submit any definite proposal to the Elder Brethren, and that the statute requires them in making such an application, to state fully the nature of the work proposed to be undertaken, and their reasons for doing so.
6. 23d February, 1858.—Letter from Board of Trade, stating that Elder Brethren will shortly visit the locality, with a view of selecting a site.
7. 8th March, 1858.—Answer from Commissioners, stating that they had sent to Elder Brethren copy of the correspondence which had passed between them on this subject.
8. 18th March, 1858.—Reply from Board of Trade, regretting misunderstanding which appears to have arisen on this subject.

River Ness.

1. 24th March, 1855.—Application from Clerk of Harbour Trustees, Inverness, for light at mouth of River Ness.
2. 28th March, 1855.—Letter to Clerk of Harbour Trustees, wishing to be informed whether the position referred to for the light, is not locally situated within the bounds of Inverness harbour. Answered that it was, and light refused.

Nosshead.

- See also Parliamentary Report on lighthouses, 1845, Appendix No. 22, p. 556 (Caithness, S. E. coast). After much discussion regarding comparative merits of Sarclethead and Nosshead, as the site, the Queen issued an Order in Council, that the light be placed on Nosshead, 21st January, 1846.
- Erected and light exhibited, 1849.

Holbornhead.

1. 2d December, 1846.—Memorial of Trustees of Scabster Harbour, for a light to open up the anchorage, remitted to engineer to report.
2. 28th April, 1848.—Letter from engineer, with extract letter from Mr. Sinclair, of Forss, 18th April, 1848, urging necessity for light.

3. 24th May, 1848.—Letter to Mr. Sinclair, stating that a deputation of the Commissioners will visit the locality.
 4. 26th June, 1848.—Letter to Trinity House, regarding new lighthouses, and stating that Holborn can only be regarded as a local light.
 5. 24th December, 1856.—Secretary directed at meeting to write to Board of Trade for instructions.
 6. 5th February, 1857.—Letter from Trinity House, conveying sanction to erect lighthouse.
 7. 12th February, 1859.—Letter from Board of Trade, conveying sanction.
- Matter postponed, owing to disagreement about ground. A full copy of the correspondence has been sent to the Commissioners.

Cantickhead.

1. 29th January, 1848.—Recommendation for a light in letter from Lieutenant Thomson, R.N.
 2. 26th June, 1848.—Letter from Trinity House, with reference to Lieutenant Thomson's recommendation, and agreeing with him as to importance of having a light.
 3. 26th October, 1853.—Engineer proposes that a light should be erected. Approved.
 4. 16th November, 1853.—Meeting resolved to erect a lighthouse.
 5. 1st December, 1853.—Letters to Trinity House and Board of Trade for sanction.
 6. 23d May, 1854.—Letter from Board of Trade conveying sanction.
 7. 2d April, 1856.—Contract for building the lighthouse to be entered into.
- Erected and light exhibited 1858.

Hoy Sound.

- See also Parliamentary Report on Lighthouses 1845, appendix p. 557.
- 7th December, 1846.—Trinity House approved of erecting lighthouses.
- Erected and lights exhibited 1851.

Grimsness Head.

1. May, 1855.—Petition from fish curers, fishermen, and others in the Orkney Islands for a light on Grimsness Head, in South Ronaldshay, as a guide to fishermen coming in from sea to the herring fishing stations.
2. 30th May, 1855.—Stating that the Commissioners cannot undertake to erect any lighthouse of a temporary character, such as is wanted.

Orkney.

- Thieves Holm. Hellyar Holm.
1. 16th September, 1858.—Memorial from Manager and Directors of Aberdeen Shipping Company, to have a light in Shapinska Sound.
 2. October, 1858.—Memorial from Harbour Trustees of Kirkwall, as to importance of light on Thieves Holm, to lead into Kirkwall Bay, &c., or on headland of Durness.
 3. December, 1858.—Joint memorial from commissioners of supply, and road trustees of Orkney for light on Thievesholm, as it would conduce to the safety of vessels navigating Orkney islands.
 4. 3d January, 1859.—Report by Messrs. Stevenson on merits of Thieves Holm and Hellyar Holm, but stating that the relative costs of a light on either site would be found to have considerable weight in coming to a conclusion.
 5. March, 1859.—Petition from ship owners, ship master and pilots of Kirkwall, and others (65 signatures appended) urging a light.
 6. 7th December, 1859.—Report by Engineers that they had made survey, and recommend a small light on Hellyar Holm. Secretary directed to intimate to petitioners that the Commissioners are of opinion that Hellyar Holm is the proper site, in order that they may have an opportunity of forwarding observations.
 7. 8th December, 1859.—Letter to Mr. Aytoun, sheriff of Orkney, stating that Hellyar Holm appears to Commissioners to be the best site.
 8. 3rd January, 1860.—Answer from Mr. Aytoun, conveying observations in favour of Thievesholm, as the best site.
 9. 12th January, 1860.—Letter from Mr. Aytoun, enclosing extract of minute of commissioners of supply of Orkney, detailing the superior advantages of Thievesholm.

XIV.

LIGHTHOUSES—GENERAL RETURN.

XIV.

SCOTLAND.
Circular II.
Question
XIV.

10. 12th January, 1860.—Letter from Mr. Frazer, Kirkwall, enclosing excerpt from minutes of trustees for Orkney roads, in favour of Thievesholm.

11. 17th January, 1860.—Letter from Mr. Scarth, Lloyds agent, Kirkwall, stating that the general opinion of shipmasters is in favour of Thievesholm.

12. 31st January, 1860.—Supplementary report by Messrs. Stevenson, that as the question is entirely as to lighting Shapinsha Sound and the String, they are still of opinion that Hellyar Holm is the best site.

The whole subject re-committed to Messrs. Stevenson, as when this report was written by them, they had not before them the last letters on the subject.

13. 11th February, 1860.—Further supplementary report by Messrs. Stevenson, still in favour of Hellyar Holm.

14. Letter from Mr. Aytoun, 25th February, 1860, conveying further opinions in favour of Thievesholm.

15. 13th March, 1860.—Letter from Mr. Aytoun, enclosing a document signed by every ship owner in Kirkwall (29 in number) recommending Thievesholm.

Consideration delayed.

Auskerry.

1. 7th February, 1848.—Letter from Admiralty, with enclosure from Lieutenant Thomson, R.N., recommending *inter alia*, a light on island of Auskerry.

2. 10th February, 1848.—Engineer reports that the application seems to have reference rather to the local wants of Orkney than to the necessities of general navigation.

3. 26th June, 1848.—Letter from Trinity House, concurring with Lieutenant Thomson, that a light on Auskerry would be useful as a coast light.

Nothing further done.

North Ronaldshay.

1. 16th March, 1848.—Letter to Trinity House, stating the Commissioners resolution of erecting a lighthouse here, instead of renovating Start Point light, and increasing its range.

2. 17th April, 1848.—Letter from Trinity House, conveying their sanction.

3. 11th January, 1851.—Resolved to build the lighthouse in course of ensuing year.

Erected and light exhibited 1854.

Bressay or Kirkabisterness.

1. 16th November, 1853.—Commissioners resolve to erect a lighthouse at the south entrance to Lerwick.

2. 1st December, 1853.—Letter to Trinity House for sanction.

3. 11th January, 1854.—Reply from Trinity House, stating that light on Bressay would be useful, but should be considered strictly local; however, in the spring they intend making a personal examination of the locality, with a view of obtaining the best site.

4. 2d August, 1854.—Letter from Trinity House, stating that they have visited the locality, and are of opinion that the outermost point of Kirkabisterness is the best site.

5. 10th November, 1854.—Report by engineers, stating that having made a survey, they find that Kirkabisterness commands so great a range of illumination, that it is preferable to the site suggested nearer Lerwick.

6. 27th December, 1855.—Letter to Board of Trade, transmitting plans of proposed lighthouse.

7. 12th January, 1856.—Reply from Board of Trade approving of ditto.

Erected and light exhibited 1858.

Whalsey.

1. 19th November, 1851.—Board resolve to erect a lighthouse.

2. 19th November, 1851.—Letter to Trinity House, wishing their sanction.

3. 27th November, 1851.—Reply from Trinity House, conveying sanction.

4. 5th October, 1853.—Offer of Mr. Kinghorn to build lighthouse for 6294*l.* 9*s.* 3*d.*, accepted.

5. 9th January, 1854.—Letter from Board of Trade, declining to sanction estimate for lighthouse.

6. 11th January, 1854.—Letter to Mr. Kinghorn, requesting him to suspend any preparations for the completion of his construct.

7. 24th February, 1854.—Letter from Mr. Kinghorn, requesting to be informed whether the Commissioners intend to proceed with the execution of the contract.

8. 25th February, 1854.—Letter from Commissioners to Board of Trade, transmitting copy of Mr. Kinghorn's letter.

9. 3d March, 1854.—Reply from Board of Trade approving of Commissioners proceeding with the lighthouse.

10. 7th March, 1854.—Letter to Mr. Kinghorn, authorizing him to proceed with the works.

11. 14th March, 1854.—Letter from Board of Trade, enclosing one from Admiralty, as to expediency of immediately erecting two lighthouses in Shetland.

The remainder of the correspondence on this subject has already been communicated to the Royal Commissioners.

North Unst.

1. Reference in engineer's annual report for 1850, stating the great expense which would attend the erection of a lighthouse here. A light would be of no great importance.

2. Engineer states (annual report for 1851) that the necessity for a light cannot be considered as urgent.

3. 11th March, 1854.—Letter from Board of Trade, enclosing one from Admiralty, as to expediency of immediately erecting two temporary lights in Shetland.

4. 23d March, 1854.—Letter from Board of Trade, requesting urgent steps to be taken for the erection of the lighthouse.

5. 3d April, 1854.—Letter to Board of Trade, stating that the Commissioners would make all the necessary arrangement for the erection.

The remainder of the correspondence on this subject has already been communicated to the Royal Commissioners.

Sule Skerry.

(30 miles north of Cape Wrath.)

1. 27th February, 1852.—Application from Mr. Sinclair Thurso, for light or beacon on this dangerous rock.

2. 3d March, 1852.—Letter to Mr. Sinclair stating that Commissioners cannot hold out any prospect of a lighthouse being erected; the expense would be great, the efficiency doubtful.

3. 15th October, 1852.—Letter to Mr. Sinclair, stating that the Commissioners had visited the Sule Skerry, and that although the expense of erecting a beacon would not be great, still the locality was not suitable for the erection of one, and that the height of rock itself served as a conspicuous mark.

4. 10th December, 1852.—Letter from Mr. Sinclair, hoping the Commissioners may further consider the subject.

5. Engineer reports (annual report 1853) against the establishment of a light, owing to expense, other engagements, &c.

Butt of Lewis.

1. 16th August, 1854.—Letter from Board of Trade, directing attention to the Butt of the Lewis, as an eligible site for a lighthouse, the erection of which the Commissioners last year considered as desirable for the safe navigation of the west coast of Scotland.

2. 15th November, 1854.—Engineer submits plans showing proposed site for a lighthouse.

3. 24th December, 1856.—Letter to the Board of Trade, stating that as the lighthouses, approved of in 1853, were nearly completed, Butt of Lewis and others might be constructed.

4. 14th January, 1857.—Answer from Board of Trade, stating that they do not find any definite plans for this lighthouse has been sanctioned by the Trinity House.

SCOTLAND.
Circular II.
Question
XIV.

XIV.

5. 20th May, 1857.—Letter to Trinity House, desiring sanction.
6. 12th June, 1857.—Reply from Trinity House, enclosing a letter they had written to the Board of Trade, communicating their views on this as well other proposals.
7. 20th January, 1859.—Letter from Board of Trade, stating that lighthouse on Butt of Lewis should be proceeded with as soon as possible, and requesting plans.
8. 14th April, 1859.—Letter to Board of Trade, transmitting plans of lighthouse.
9. 2d June, 1859.—Letter to Board of Trade, transmitting tenders and recommending offer of Messrs. Barr to be accepted.
10. 4th June, 1859.—Reply from Board of Trade, approving of Messrs. Barr's offer.

Lighthouse in course of erection.

Stornoway.

1. 29th March, 1848.—Letter from engineer, enclosing one from Admiral Beaufort, and report by Captain Otter, in favour of light at Stornoway.
2. 29th March, 1848.—Letter to Admiralty, stating that proposal for a light has been remitted to a sub-committee.
3. 20th November, 1850.—Commissioners resolved to erect a lighthouse.

Erected and lighted January 1853.

Hebrides. Haskier. Monach.

1. 18th January, 1859.—Letter from Board of Trade, with enclosure from Captain Otter, as to necessity for a light.
2. 27th January, 1859.—Letter to Board of Trade, saying that a deputation of the Commissioners would visit the locality, and report.
3. 8th February, 1859.—Answer from Board of Trade, proposing a joint inspection of Elder Brethren and Commissioners.

A committee of the Commissioners met the Elder Brethren and Captain Otter, and thought that a lighthouse might be advantageous to guide coasting vessels clear of the dangerous rocks and shoals of that part of the coast.

4. 6th October, 1859.—Letter to Board of Trade, desiring their sanction to survey being made.
5. 19th October, 1859.—Letter from Trinity House, stating their opinion that a light on the Monach group of islands would be beneficial.
6. 9th November, 1859.—Letter from Board of Trade, stating that they quite agree with the Trinity House, as to placing a light on west of Monach group, but do not consider further survey necessary.
7. 7th December, 1859.—Report by Engineer, saying a further survey is necessary.
8. 4th January, 1860.—Letter from Trinity House, approving of a lighthouse being built on the Monach.
9. 11th January, 1860.—Ditto, from Board of Trade ditto.
10. 30th January, 1860.—Commissioners remit to Messrs. Stevenson to prepare plans, &c., of lighthouse.

Ushenish.

1. 3d August, 1854.—Communication from Trinity House, as to desirability of a lighthouse at Ushenish.
2. 10th November, 1854.—Report by engineer, with plans of lighthouse.
3. 14th November, 1854.—Letter from Board of Trade, approving of lighthouse being erected.

Erected and lighted November 1857.

Stourhead.

1. 24th December, 1856.—Letter to Board of Trade, stating that as lighthouses approved of in 1853 were nearly completed, Stourhead and others might be constructed.
2. 20th May, 1857.—Letter to Trinity House, requesting sanction.
3. 12th June, 1857.—Reply from Trinity House, enclosing a letter they had written to Board of Trade, giving preference to a projecting lump called "South Ear," as a site for the lighthouse.
4. 20th January, 1859.—Letter from Board of Trade, stating that lighthouse on Stourhead should

LIGHTHOUSES—GENERAL RETURN.

XIV.

- be proceeded with as soon as possible, and requesting plans.
5. 3d June, 1859.—Letter to Board of Trade, transmitting plans and estimate of lighthouse.
 6. 13th July, 1859.—Reply from Board of Trade, stating that my Lords are not prepared to sanction so high an estimate, and that the execution of the work must be postponed.
 7. 15th July, 1859.—Answer from Commissioners, explaining why estimate is so high.
 8. 19th July, 1859.—Reply from Board of Trade, wishing further explanation.
 9. 4th August, 1859.—Answer from Commissioners, giving ditto.

Rhu Rhea.

1. 1st December, 1853.—Letter to Trinity House, for sanction to erect lighthouse on Rhu Rhea.
2. 11th January, 1854.—Reply from Trinity House, stating that they intend visiting locality in the spring.
3. 2d August, 1854.—Letter from Trinity House, stating that having visited the locality, they think that a general passing light should be erected on Rhu Rhea, and a local light on Rona.
4. 11th August, 1854.—Letter to Board of Trade, stating that Commissioners had received a report from the Trinity House, and that they would now proceed to survey.
5. 10th November, 1854.—Engineer submits his report of survey.
6. 14th November, 1854.—Letter from Board of Trade, approving of erection of lighthouse on Rona.
7. 24th December, 1856.—Letter to Board of Trade, stating that as lighthouses sanctioned in 1853 were nearly completed, Rhu Rhea, along with others, might be constructed.

Rona.

1 to 6, same as Rhu Rhea.
Erected and light exhibited, 1857.

Kyleakin.

See also Parliamentary report on lighthouses, 1845, appendix No. 2, p. 577 (Castle Moil, Sound of Skye), remitted to engineer.

1. 4th December, 1844.—Application from Hugh McAskill, Esq., urging necessity for a lighthouse.
2. 23d December, 1845.—Engineer reports that a lighthouse is needed, and suggests the best site.
3. 21st October, 1846.—Commissioners resolve to erect a lighthouse as soon as the other engagements of the board will admit.
4. 27th October, 1846.—Letter to Trinity House, intimating resolution of Commissioners.
5. 5th November, 1846.—Answer from Trinity House, stating that the subject would receive attention pending further communication.
6. 19th November 1846.—Letter to Trinity House in terms of statute.
7. 7th December, 1846.—Letter from Trinity House, that they would visit the station.
8. 10th September, 1847.—Letter from Trinity House, approving.

Erected and light exhibited 1857.

Isle Oronsay.

1 to 6, same as Rhu Rhea.
Erected and lighted November 1857.

Ardnamurchan.

See Parliamentary report on lighthouses, 1845, appendix No. 22, p. 556. Resolved on, and trade to be consulted.

1. 24th January, 1845.—Circular to trade.
2. Answer from various bodies, favourable.
3. 28th February, 1845.—Committee resolve to erect a lighthouse.
4. 19th March, 1845.—General meeting approve, and remit to the committee to proceed.
5. 27th March, 1845.—Letter to the Trinity House, intimating resolution.
6. 8th May, 1845.—Answer, that Elder Brethren will visit the locality.
7. 22d October, 1845.—Letter from Elder Brethren, approving.

Erected and light exhibited, 1849.

XIV.

LIGHTHOUSES—GENERAL RETURN.

XIV.

Sound of Mull.

- 1 to 5, same as Rhu Rhea.
6. 14th November, 1854.—Letter from Board of Trade, approving of erection of lighthouse. Erected and light exhibited 1857.

Corran.

1. 27th December, 1845.—Letter from Admiralty, wishing to know if the Commissioners have any intention of erecting a lighthouse on Corran.
2. 31st December, 1845.—Report by engineer, that a light would prove useful.
3. 11th June, 1846.—Letter from Engineer, recommending the establishment of this light as a harbour light under canal commissioners.
4. 21st September, 1847.—Letter from Captain Robinson, R.N., stating necessity for a light, and conversation with Prince Albert on the subject.
5. 23d September, 1847.—Answer referring to canal commissioners.
6. Correspondence with Captain Robinson, principally as to buoying Linne Loch, also stating that a light at Corran is of too local a description to be undertaken by Commissioners, and that at any rate its execution must rank in importance after many other stations.

7. 22d January, 1848.—Letter from Secretary of Caledonian Canal, stating that he does not find any disposition on part of officers of treasury to recommend the canal commissioners to undertake the erection and maintenance of a light on Corran, and trusting that Commissioners of Northern Lighthouses will attach some weight to the claims of Corran Point for a lighthouse.

8. 25th January, 1848.—Report by engineer or to local character of light, and that the same urgent wants of the mariner must be attended to in preference.

9. 2d February, 1848.—Letter to Caledonian canal commissioners in terms of report.

10. 24th May, 1848.—Report by secretary as to his proceedings while in London, endeavouring to get clauses introduced into the Caledonian Canal Commissioners Bill before Parliament, to empower them to exhibit and erect lights. (Not complied with.)

11. 2d December, 1852.—Letter from engineer, Caledonian Canal, and enclosure from a ship master as to necessity of having a light on Corran Point. Secretary to report on previous proceedings and correspondence.

12. 29th December, 1852.—Report by secretary. Matter to rest until engineer reports on application for a light on Colonsay.

13. 14th January, 1857.—Letter from Board of Trade regarding the erection of various lighthouses in Scotland, and wishing Commissioners to consider as to exhibition of a small light at Corran Ferry.

14. 29th January, 1857.—Answer by Commissioners stating previous proceedings with regard to this lighthouse, and the inexpediency of erecting it.

15. 11th June, 1857.—Letter from Trinity House to Board of Trade, stating that committee had availed themselves of the opportunity of inspecting Corran Point, and found it a very eligible site for a small lighthouse, and recommending the early establishment of one there.

16. 24th June, 1857.—Letter from Board of Trade transmitting copy of letter from Trinity House, and sanctioning lighthouse.

In course of erection.

Lady Rock, Lismore.

7th March, 1860.—Recommendation from Capt. Bedford for a reflected light from Lismore to mark the beacon on this rock. Remitted to Messrs. Stevenson to report.

Phladda.

1. 7th March, 1857.—Captain Bedford having suggested propriety of placing a light on Phladda Island off Luing, report by Messrs. Stevenson stating that they took an opportunity of examining it, and think a lighthouse would be of great utility, and would, in connection with Ruadsgeir and Skervuile, complete the lightings of the sound of Jura.

2. 20th May, 1857.—Commissioners submitted to Trinity House, in terms of Act, for their sanction to build lighthouse.

3. 11th June, 1857.—Letter from Trinity House to Board of Trade, stating that committee had availed themselves of the opportunity of inspecting Phladda Island, and think the best position would be on a rocky ledge on the S.E. point.

4. 24th June, 1857.—Letter from Board of Trade transmitting copy letter from Trinity House, and sanctioning lighthouse.

In course of erection.

Portascaig.

1. 1st December, 1853.—Letter to Trinity House for sanction to erect lighthouse at Portascaig.

2. 11th January, 1854.—Reply from Trinity House stating that a light at Portascaig would only be useful to vessels passing through that Sound, and should, therefore, be considered as a local light, but that they intend visiting locality in the spring.

3. 2d August, 1854.—Letter from Trinity House, stating, that having visited the locality they do not approve of this position, and that Rhu Vaal Head would be the best.

Ruadsgeir.

1. 20th May, 1857.—Commissioners submitted to Trinity House in terms of Act, for their sanction to erect a lighthouse on Ruadsgeir.

2. 11th June, 1857.—Letter from Trinity House to Board of Trade, stating, that having visited the locality, they think that though an eligible site for a lighthouse, they consider it less urgently required than Skervuile or Phladda.

3. 24th June, 1857.—Letter from Board of Trade transmitting copy of letter from Trinity House as to this.

Colonsay.

1. 27th November, 1852.—Letter from Mr. May, Caledonian Canal, enclosing one from Captain Taylor, regarding importance of a light on north end of Colonsay.

2. 11th January, 1853.—Engineer reports that it will be necessary for him to visit the locality.

Rhu Vaal lighthouse, Sound of Islay, has been built instead of one on Colonsay.

Rhu Vaal.

Separate return transmitted on 13th June, 1859.

Skervuile, or Iron Rock.

Copy correspondence sent on 9th August, 1859.

Lachindaal.

See also parliamentary report on lighthouses 1845, appendix No. 22, p. 555. Refused.

1. 9th July, 1846.—Memorial from chairman and directors of association of under writers, Glasgow, as to necessity for a light to open up the harbour of refuge.

2. 25th August, 1846.—Memorial from president and members of the Liverpool Underwriters Association, as to necessity for a light to open up the harbour of refuge.

3. 25th August, 1846.—Letter from General Shipowners Society, regarding memorial from underwriters, Glasgow, hoping it may meet with favourable consideration.

4. 20th October, 1846.—Report by engineer on various applications, and recommending Dune Point as the best site for a lighthouse.

5. 26th October, 1846.—Letter to Trinity House transmitting copy of engineer's report, and stating intention of Commissioners to recommend erection of a lighthouse at first general meeting.

6. 5th November, 1846.—Answer from Trinity House saying that the matter will receive attention, pending further communications on the same subject.

7. 23rd October, 1846.—Letter to Secretary Underwriters' Association, Glasgow, stating Commissioners intention of erecting a lighthouse on Dune Point, so soon as their other engagements will permit.

XIV.

8. 23d October, 1846.—Letter to president of underwriters, Liverpool, in same terms.

9. 26th October, 1846.—Letter to Trinity House respecting sanction.

10. 7th December, 1846.—Answer from Elder Brethren, that they intend visiting the site.

11. 13th January, 1847.—Letter from Lloyd's agent in Islay, approving of the Commissioners' intention to erect a lighthouse, and enclosing a letter from shipowners regarding site.

12. Answer to Lloyd's agent stating that the subject of erecting a lighthouse is under consideration, but no prospect of the work being undertaken during the ensuing spring.

13. 16th September, 1847.—Letter from Trinity House conveying approval.

14. 16th April, 1848.—Letter from Lloyd's agent, regarding a wreck, and the necessity of a lighthouse being proceeded with.

15. 8th March, 1850.—Letter from Lloyd's agent urging necessity for erecting a lighthouse without delay.

16. 22d March, 1850.—Answer to Lloyd's agent, stating that this is not lost sight of, but delayed for want of funds.

17. 5th February, 1851.—Letter from Lloyd's agent regarding a wreck, and necessity for a lighthouse.

18. 12th February, 1851.—Answer referring to previous letter of 22d March, 1850, subject not overlooked, to be taken up as soon as funds and engagements of the Board will admit.

19. 6th March, 1858.—Letter from J. Dickson, Esq., enclosing letter from C. McLean, Esq., urging necessity for a lighthouse, and mentioning wrecks which had occurred.

20. 12th March, 1858.—Letter from Lloyd's agent, urging necessity for a lighthouse, and mentioning wrecks.

21. 18th March, 1858.—Letter to Mr. J. McLean stating that the intention of erecting a lighthouse has for some years been abandoned, as it is inexpedient to invite vessels of large tonnage to this anchorage, and calling attention to the erection of a lighthouse in the Sound of Islay.

Not erected.

Mac Arthur's Head.

1. 14th January, 1857.—Letter from Board of Trade, regarding erection of a lighthouse at Mac Arthur's Head.

2. 29th January, 1857.—Answer stating that Commissioners will give subject of light their attentive consideration.

3. 11th June, 1857.—Letter from Trinity House to Board of Trade, recommending Mac Arthur's Head as a suitable place for a lighthouse.

4. 24th June, 1857.—Letter from Board of Trade, transmitting copy of letter from Trinity House, and sanctioning lighthouse.

In course of erection.

Sanda.

See also parliamentary report on lighthouses, 1845, appendix No. 22, p. 556. Refused.

1. 18th February, 1846.—Letter from Ballast Board, Dublin, as to removing Kintyre lighthouse to Sanda, while they erect a lighthouse on Rathlin Island.

2. 7th May, 1846.—Letter from harbour master, Greenock, as to necessity for a light on Sanda.

3. 22d May, 1846.—Further letter from harbour master, Greenock, mentioning wrecks which had occurred on Patterson's Rock, a short distance from Sanda.

4. 13th October, 1846.—Report by engineer against removal of Kintyre light, and recommending Ship Rock of Sanda as a site for a lighthouse.

5. 24th October, 1846.—Letter to Ballast Board, stating inexpediency of removing light at Kintyre, and conveying Commissioners' resolution of erecting alighthouse on Ship Rock of Sanda.

6. 24th October, 1846.—Letter to harbour master, Greenock, conveying resolution of Commissioners to erect a lighthouse on Sanda.

7. 19th November, 1846.—Letter to Trinity House in terms of statute for sanction.

LIGHTHOUSES—GENERAL RETURN.

XIV.

8. 7th December, 1846.—Reply from Trinity House, approving.
Erected and light exhibited, 1850.

Devaar.

See also Parliamentary Report on Lighthouses, 1845, appendix No. 22, p. 555. Reserved.

1. 13th October, 1846.—Report by engineer that a light on Devaar would complete the chain of lights leading from the ocean to a safe refuge in Campbeltown harbour.

2. 5th November, 1846.—Letter to Trinity House, recommending that a light be placed on Devaar.

3. 6th November, 1846.—Letter to magistrates of Campbeltown, stating the intention of Commissioners to build a lighthouse on Devaar.

4. 7th December, 1846.—Approval of Trinity House.

Erected and light exhibited 1854.

Girvan.

1. June, 1850.—Petition from magistrates of Girvan, for a light on coast of Carrick in the Bay of Girvan, to serve both as a harbour and coast light.

2. June, 1850.—Engineer reports that a light is unnecessary on this part of the coast.

3. 11th July, 1850.—Letter to town clerk, stating that Commissioners do not consider a light necessary in the locality, and that they have no power to erect harbour lights.

Cairn Ryan.

See also parliamentary report on lighthouses, 1845, Appendix No. 22, p. 557. Reserved.

1. 6th June, 1845.—Letter from Captain Edmondston, suggesting the importance of a light at the entrance to Loch Ryan.

2. 10th June, 1845.—Report by engineer, on above letter agreeing as to usefulness of light.

3. 7th July, 1845.—Meeting resolve to recommend to ensuing general meeting that beacon on Cairn Ryan should be converted into a lighthouse.

4. 8th July, 1845.—General meeting direct statutory notice of alteration to be made to Trinity House.

5. 8th July, 1845.—Letter to Trinity House conveying statutory information.

6. 17th July 1845.—Answer from Trinity House, stating that Elder Brethren will visit the station.

7. 22nd October, 1845.—Letter from Trinity House, approving.

Erected and light exhibited, 1847.

Heston (Solway).

1. 22d March, 1847.—Letter from Admiralty, suggesting light on Heston Island.

2. 30th March, 1847.—Report by engineer, stating that the call for a light cannot be viewed as pressing.

3. 1st January, 1848.—Letter from Solicitor General, enclosing five petitions from ship owners, &c. interested in safety of Solway navigation.

4. 10th January, 1848.—Answer, stating that the call for a light is not so urgent as to induce the Board to erect one at present.

5. Correspondence in winter of 1848-9, as to article in "Dumfries and Galloway Courier," and letter from Mr. Sandford, sheriff of Kirkcubright, enclosing memorial, urging importance of a small coasting light, owing to increased traffic in the Solway.

6. 29th May, 1849.—Report by engineer, stating that it is inexpedient to erect a light on Heston Island.

7. 4th June, 1849.—Letter to memorialists in terms of engineer's report.

8. 3d November, 1849.—Answer from Mr. Maxwell, disagreeing with Commissioners views in regard to this.

9. 24th January, 1849.—Letter to Captain Robinson, R.N., stating that Commissioners had come to no conclusion as to erecting a light on Heston.

Nothing further done.

LIGHTHOUSES—GENERAL RETURN.

XIV.

SCOTLAND.
Circular II.
Question
XIV.

Southernness (Solway).

1. 4th March, 1859.—Proposal from River Nith Commissioners for the surrender of this light to the Northern Lighthouse Board.

2. 10th March, 1859.—Letter to Nith Commissioners as to range of light.

3. 20th May, 1859.—Reply by Nith Commissioners, giving range.

4. 26th May, 1859.—Letter to Nith Commissioners regarding difficulties in way of surrender.

The Commissioners on their tour of inspection visited this station on the 22d July, 1859, and were unanimously of opinion that the proposed transfer should be rejected.

1. On account of the very inefficient state of the premises; and
2. Because it was very much to be doubted whether this was the best site for the light house.

Bahama Bank Floating Light.

1. 28th November, 1846.—Letter from Glasgow and Liverpool Steam Company, stating that they mean to memorialize Commissioners of Northern Lighthouses for floating light, and wishing to know if same comes within the province of the Board.

2. 2d December, 1846.—Answer stating that Commissioners had no powers.

Douglas Head.

1. 21st May, 1857.—Letter from Harbour Commissioners, Isle of Man, wishing the Northern Light Commissioners to free them from maintenance of light.

2. 18th June, 1857.—Letter to Harbour Commissioners wishing information as to description of tower, lighting apparatus, &c.

3. 24th June, 1857.—Letter from Harbour Commissioners, that no dues are levied by them.

4. 26th June, 1857.—Answer, stating that if Commissioners assume the light, they must be empowered to levy dues.

5. 6th July, 1857.—Letter from Harbour Commissioners, conveying information as to height of tower, &c.

6. 20th July, 1857.—Commissioners of Northern Lighthouses, on their tour of inspection visited the station, and agreed to apply for the sanction of Board of Trade to the proposed surrender.

7. 6th October, 1857.—Letter to Board of Trade in conformity.

8. 24th October, 1857.—Reply stating difficulties in way.

9. 21st December, 1858.—Letter from Harbour Commissioners, saying they are prepared to waive difficulties, and consent to a transfer.

10. 31st December, 1858.—Letter from Board of Trade, desiring an estimate of cost of transfer, maintenance, &c.

11. 2d June, 1859.—Answer by Commissioners conveying estimate.

12th. 7th June, 1859.—Reply by Board of Trade, approving of transfer.

This light was taken in charge by the Commissioners, and lighted by them on 1st August, 1859.

Langness, Isle of Man.

1. 1st April, 1846.—Memorial from merchants, ship owners, &c. of the Isle of Man as to necessity for a light.

2. 2d April, 1846.—Answer, stating that Commissioners cannot erect any more lighthouses in Isle of Man, for want of powers.

3. 27th August, 1859.—Memorial from John McMeiken, agent for Shipwrecked Fisherman's Society, &c., as to importance of light and fog-bell attached, mentioning wrecks which had occurred, and enclosing extract from Captain Washington report, urging the great necessity for a light.

4. 8th December, 1859.—Report by Messrs. Stevenson on above memorial, stating that a light here would be useful, and suggesting a survey.

5. 15th December, 1859.—Letter to Board of Trade, for authority to make survey.

6. 19th December, 1859.—Reply, stating that as at present advised, they see no necessity for another light in the Isle of Man, but that Commissioners may apply through Trinity House.

7. 5th January, 1860.—Letter to Trinity House, desiring their opinion as to the erection of a light-house.

8. 11th January, 1860.—Reply from Trinity House, stating that they see no sufficient cause for an additional light in the locality.

9. 16th January, 1860.—Letter to J. McMeiken, Esq., stating that Government had decided against it.

LIST of sites for lighthouses, submitted to President of Board of Trade, 1853.

- St. Abb's Head.
- Inch Colm.
- Carline Nose.
- Fifeness.

1857	29,867	13 3	30,487	14 4	31,716	1 9	62,203	16 1
1858	26,337	15 5	30,621	7 2	29,125	8 1	59,746	15 3

a During the year 1846, two reductions of light duties came into operation. The first was one halfpenny per ton for the Bell Rock Light; one farthing per ton for each of the lights of Corsewall and Mull of Galloway, and one eighth of a penny for Pladda Light. This reduction was in operation during the first half of 1846.

The second reduction, which was in force during the last six months of 1846, gave, including the previous one, an aggregate abatement to coasting trade of 50 per cent. for each light.

b, c, d, e, see next page.

- SCOTLAND. XVII. LIGHTHOUSES—GENERAL RETURN. XVII.
- Circular II. Question XVI. XVII.
- XVI. If the proposal be considered deserving of attention it is remitted to Messrs. Stevenson to make experiments in a temporary lightroom provided for this purpose at Inch Keith, and they report the result. The Board previously had temporary cabins at Gulaneness, where extensive comparative trials were conducted by them.
- XVII. DATES of all applications for power to construct or reconstruct or alter lighthouses, since October 1853, with date of final approval, and in case of non-compliance, the reason given for any deviation.
1. 16th November, 1853.—Commissioners resolved to erect the following lighthouses:—
 1. One at or near Portaskaig, in the Sound of Islay.
 2. One at or near Tobermory, in the Sound of Mull.
 3. One at the south entrance to the Sound of Skye.
 4. One on the Island of Rona, north entrance to the Sound of Skye, in addition to the light already resolved upon at Kyleakin.
 5. One on the coast of Sutherland, at or near Stourhead or Rhu Rhea.
 6. One at Little Holbornhead, near Thurso.
 7. One on Cantickhead or Switha, in Orkney, and
 8. One on Bressay, at the south entrance to Lerwick.
 2. 1st December, 1853.—Letter to Trinity House for sanction.

A copy of the above letter sent to the Board of Trade same day.

 3. 11th January, 1854.—Letter from Trinity House, stating that they had come to the following conclusions with respect to the eight proposed lights:—
 1. That a light at Portaskaig would only be useful to vessels passing through that sound, and should, therefore, be considered as a local light.
 2. That a light near Tobermory would be useful to indicate the northern entrance to that sound, and should be considered as a local light.
 3. That a small light at the southern portion of the sound of Skye, would also be useful as a local light.
 - 4, 5. The Elder Brethren thought that though a small light on Rona might be found useful to open up the Sound of Applecross, the necessity of its erection would become unquestionable, if the first class light proposed for Stourhead or Rhu Rhea Head were placed on the latter headland.
 6. A small light for Thurso Bay would be found useful, but should be deemed strictly local and chargeable as such.
 7. That a light on Cantickhead or Switha, would be beneficial to vessels passing through the Pentland Frith, as indicating the entrance to the anchorage of Longhope, and might with propriety be charged as a general local light; and
 8. That the light on Bressay would be useful, but should be considered strictly local.

And that, in the event of the intended erection, any portion of them meeting the sanction and concurrence of the Board of Trade, they will in the spring make a personal examination of the several localities with the view of forming a definite opinion as to the most eligible site.
- b* In the year 1854 the light duties were reduced from one farthing per ton for coasting vessels, to the sixteenth of a penny, less ten per cent.; and an abatement of 25 per cent. was granted from the duties paid by the overseas shipping.
- The total expenditure since 1854 has been defrayed from the Mercantile Marine Fund, the income having since then been paid to that fund.
- c* Up to 30th June 1856, the income included light duties collected at all the ports in the United Kingdom, payable for Northern Lighthouses only. Subsequent to that date, the income stated consists of duties received for all British and Irish lights collected at ports in Scotland and the Isle of Man, for each of the three Boards.
- d* In April 1857, the abatement allowed from the duties was increased to 25 per cent. for coasting, and 40 per cent. for overseas shipping.
- In the preceding return, under the head ordinary maintenance, is given the whole expenditure (including shipping, salaries, superannuations, and all other outlays) incurred for the lighthouses. The sums annually expended for new works are given separately.
- e* In 1852 the Commissioners were placed under the control of the Board of Trade when various alterations, were by directions of the Board of Trade made in stating the mode of the accounts. These alterations changed the relative amounts of ordinary and extraordinary expenditure, as charging the Engineer's salary to extra expenditure which was previously stated against ordinary expenditure, &c. The commission of 5 per cent. on the receipts paid to collectors, was also cut off.
4. 26th January, 1854.—Letter to Board of Trade, sending copy of Trinity House's letter.
 5. 2d August, 1854.—Letter from Trinity House, stating that pursuant to their intention they had visited the coast of Scotland with the object of giving a definite reply as to the particular site which they might approve as most eligible for each of the new lighthouses, under sanction of the Board of Trade.
 - 1st. At or near Portaskaig, in Sound of Islay; does not approve of this position, but that Rhu Vaal Head would be the best.
 - 2d. That the outlying north-east point of Mull is the most suitable position.
 - 3d. Sound of Skye; that the lighthouse should be placed in the extreme point seaward of the Island of Gillian.
 - 4th. Rona; that this site is well chosen.
 - 5th. Stourhead in Sutherland or Rhu Rhea in Ross-shire. Stourhead presents a good elevation for a lighthouse should one be found necessary; but the coast between it and Cape Wrath is free from danger, the distance between them being only 26 miles. In considering the relative advantages of the Rhu Rhea and Rona as sites, they beg leave to observe, that for vessels coming up the Minsh, and stretching towards the coast for Cape Wrath, the site on Rhu Rhea would be most advantageous, whereas for vessels proceeding either north or south through the Eastern Channel that on Rona would be most beneficial. Were it not for the dangerous sunken rocks lying off the north end of Rona, a good light on Rhu Rhea would be sufficient; but the distance being 17 miles apart, a light on Rhu Rhea would not be sufficient in thick weather, when most wanted. Under these circumstances, the Elder Brethren are led to the conclusion, that if the trade of the channels is sufficient to justify the expense, a general passing light should be erected on Rhu Rhea, and a local light on Rona. In this case no lighthouse will be necessary on Stourhead, seeing that it is situate about midway between Cape Wrath and Rhu Rhea, and no dangers lying between them.
 - 6th. Thurso Bay and Scrabster Roads. There does not appear to be any difficulty steering towards this anchorage, which lies a little round the headland called "Holbornhead," which is bold and clear to seaward, and a vessel having got sight of Dunmethed at night, or of the head during day, would have no difficulty in finding her way to the anchorage in Scrabster Roads. At the same time a local harbour light would be useful, and might induce small craft to frequent this anchorage in contrary winds.
 - 7th. Cantickhead; preferred before Switha.
 - 8th. Bressay. The outermost point of Kirkabisterness is the best site—*Ushenish*.

The Elder Brethren have understood that a suggestion has been offered to erect a lighthouse in the vicinity of Huish Point, upon which, though not adverted to in your letter of 1st December, they beg to remark that Ushenish Head projects beyond Huish Point, consequently a light placed on that point would be of little use as a coasting light, although it might lead to the anchorage of Loch Skipport; and no doubt a light on that head would be very useful for the navigation of the coast to vessels bound either northward or southward.

The head is of moderate elevation, and suitable for a lighthouse.
 6. 8th August, 1854.—Report of engineer, on letter from Trinity House, as to new lighthouses; with two exceptions, the sites had been approved of, these were—
 - 1st. The Sound of Islay. The Trinity House objects to the proposed site, and after full consideration, I think the grounds on which their objections are based are well founded. They accordingly recommend a light on Rhu Vaal Head to open up the north entrance.

(Correspondence in full already sent.)

XVII.

LIGHTHOUSES—GENERAL RETURN.

XVII.

SCOTLAND.
—
Circular II.
Question
XVII.

2d. The second site, regarding which the Trinity House report adversely, is Bressay Sound. The point recommended by them is Kirkabisterness, whereas the spot I suggested is near Southness. The site which has the greatest range should have the preference, which can be found by taking bearings.

7. 11th August, 1854. — Letter to Board of Trade, stating that as the Commissioners had received a report from the Trinity House on the new lighthouses, they will now proceed with surveys of the different stations selected, in order that plans may be prepared and the ground purchased, as directed in my Lords letter of the 23rd May last.

8. 16th August, 1854. — Letter from Board of Trade, directing that attention to two other sites for lighthouses; the erection of which the Commissioners last year considered as desirable for the navigation of the west coast of Scotland; viz., the Butt of Lewis, and an intermediate station between Island Glass and Barra.

My Lords concurring that lighthouses should be erected at these places, requested the Elder Brethren, if opportunity occurred, to inspect these sites also; the Elder Brethren were able to examine only one station, viz., Ushenish, a cape midway between Barra and Island Glass; and my Lords think it would be desirable that the engineer should visit the Butt of Lewis, and Ushenish as well as the other station approved of by the Elder Brethren.

9. 18th October, 1854. — The engineer reported that the surveys of sites for new lighthouses were far advanced, and he had to bring under the notice of the Board the necessity of determining as soon as possible what works are to be undertaken next year, with a view to the preparation of the estimates and preliminary arrangements for organizing the works to be carried on.

10. 10th November, 1854. — Engineer submitted his report of the several surveys:—1st, Kirkabisterness; 2d, Butt of Lewis; 3d, Rona; 4th, Rhu Rhea; 5th, Kyleakin; 6th, Isle Oronsay; 7th, Rhu Ushenish; 8th, Rhuna Gall Tobermory; 9th, Rhu Vaal.

Sites not surveyed, Cantickhead, and Holbornhead.

11. 14th November, 1854. — Letter from Board of Trade, approving the erection of lighthouses on the sites recommended by the Trinity House in their report of (2d) August.

12. 14th March, 1854. — Letter from Board of Trade, transmitting one from Admiralty, as to the expediency of erecting two lighthouses on North Unst and Whalsey Skerries.

13. 23d March, 1854. — Letters from Board of Trade, requesting North Unst and Whalsey Skerries to be proceeded with as temporary lights.

14. 3d April, 1854. — Letter from Board of Trade, desiring that preparations for erecting the temporary lights upon Whalsey Skerries should be proceeded with, but that North Unst should be postponed, as considerable difficulty exists as to the selection of a site, and until the Trinity House makes a personal examination.

(Full correspondence already sent.)

15. 29th March, 1854. — Start Point. — Letter to Trinity House from Commissioners, intimating that so soon as North Ronaldshay Light shall be exhibited it will be necessary to alter the character of Start Point lighthouse from a revolving to a fixed light.

16. 5th April, 1854. — Letter from Trinity House, concurring in the application.

17. 6th April, 1854. — Letter to Board of Trade, requesting their approval to the change.

18. 11th April, 1854. — Letter from Board of Trade, sanctioning the change.

19. Skervuile, 31st October, 1856. — Letter to Board of Trade, intimating that applications had been made for a lighthouse on Skervuile.

20. 23rd July, 1857. — Answer from Board of Trade, that it will be better not to undertake more works for the present beyond those recently sanctioned.

21. 30th November, 1858. — Letter from Commissioners, transmitting estimates for lighthouses

for 1859, and suggesting that Skervuile or Iron Rock might be proceeded with.

22. 7th January, 1859. — Answer from Board of Trade, concurring with Commissioners, and requesting that plans, specifications, and estimates should be proceeded with.

23. 28th March, 1859. — Letter to Board of Trade, transmitting plans and specifications which Commissioners estimate at 9603*l.* 9*s.*

24. 11th April, 1859. — Letter from Board of Trade, intimating that they cannot sanction unless reduced to 6,000*l.*

(Full correspondence already sent.)

25. 24th December, 1856. — Letter to Board of Trade, stating that as the lighthouses which had been approved of by the Board of Trade from the list sent in 1853, were nearly completed, others might be constructed which had been under my Lords consideration. These were, 1st, Rhu Rhea; 2d, Butt of Lewis and Holbornhead.

26. 30th January, 1857. — Wrote to Trinity House for sanction, and received it, 5th February.

27. 29th January, 1857. — Wrote to Board of Trade for sanction, and received it 12th February, 1857.

28. 14th January, 1857. — Letter from Board of Trade, stating that it was not their wish to undertake or suggest the erection of lighthouses, which those who have more immediate knowledge do not consider necessary, but they would wish to have it considered whether a small light at the point of Corran Ferry, to aid the navigation of the Caledonian canal, and a light at the south entrance of the Sound of Islay (Mac Arthurs-head) are not needed.

29. 28th January, 1857. — Communication ordered to be opened by Commissioners with the Elder Brethren in regard to a light at the south entrance of the Sound of Islay.

30. 29th January, 1857. — Letter to Board of Trade, stating that they will give the subject of a light at the south entrance of the Sound of Islay their attentive consideration, and

31. (Same date.) — That the light at Corran has long been under the Commissioners consideration. It would unquestionably be of great utility to vessels navigating the Caledonian canal.

32. 7th May, 1857. — Report by Messrs. Stevenson, on proposed lighthouses on Hebrides, stating that Captain Bedford having suggested the propriety of placing a light on Bladda or Pladda Island, off Luin, they took an opportunity of examining it, and think that a light there would be of great utility, and would, in connection with Ruadsgier and Skervuile, complete the lightings of the Sound of Jura.

33. 20th May, 1857. — Commissioners submitted to Trinity House, in terms of Act, for their sanction, resolutions to build lighthouses on, 1st, Skervuile; 2nd, Ruadsgier; 3rd, Bladda or Pladda; 4th, Rhu Stour; 5th, Butt of Lewis.

34. Letter from Trinity House to Board of Trade, of 11th June, 1857, on the subject of the new lighthouses after having made a visit of inspection.

1. Skervuile (already sent.)

2. Ruadsgier. The Elder Brethren, although viewing it as an eligible site for a lighthouse, consider it less urgently required than Skervuile or Phladda.

3. Phladda or Bladda. — They consider this the most difficult portion of the sound for vessels navigating by night, and they consider that the best position would be on a rocky ledge on the south east point.

4. Stourhead. — The best site would be on the projecting lump called the "South Ear."

5. Butt of Lewis. — Had not an opportunity of visiting it, and referring to the Board of Trade's letter of 14th January last, they had an opportunity of visiting Corran, a small light of the 3rd order. Would be valuable for guiding vessels as they entered or left the Caledonian canal. And advertising to the preference which the Elder Brethren had considered should be given to the "Black Rock," at the Sound of Islay, having carefully examined this rock or rocks, it became evident

SCOTLAND.
Circular II.
Question
XVII.

XVII.

that a lighthouse could not be constructed on the outermost of them, and they now therefore recommend McArthurhead, as being best for guiding vessels clear of the Black Rocks and Glass Island.

35. 18th December, 1857. — Sent plans of Corran, Phladda, and McArthurhead to Board of Trade for approval, and after some correspondence as to cost, &c. were at last, in March 1858, sanctioned.

36. 9th July, 1858. — Letter from Board of Trade, postpones the erecting of Holbornhead, owing to proprietor of the land not coming to Commissioners terms (full correspondence already sent.)

37. 31st December, 1857. — Commissioners wrote to Board of Trade, advertising to the loss of two steamers in the Firth of Forth, and they think that a light on Fifeness would be a sufficient guide for the Carr Rock, while with the lights on the Isle of May, it would indicate the entrance to the Firth of Forth, and be very useful for vessels running for shelter from the north in a gale of wind.

Also lighthouse would be very useful on St. Abbs Head, being the turning point of vessels entering the Firth from the southward.

38. 23d February, 1858. — Letter from Board of Trade, stating that the Elder Brethren will visit the locality for the purpose of determining on a site on the south side of the Forth.

39. 18th March, 1858. — Letter from Board of Trade, stating that after consultation of the Elder Brethren, it appeared to my Lords that the proposed light on Fifeness would not likely meet with *their* approval, but that one was wanted on

LIGHTHOUSES—GENERAL RETURN.

XVII., XVIII.

St. Abbs Head, and they would avail themselves of an early opportunity of visiting the locality.

40. 28th April, 1858. — Letter to Board of Trade, that a deputation of the Commissioners will wait on the deputation of the Trinity House, in order to investigate the call for additional lights, and if such be found necessary to consider the best site.

41. 19th May, 1858. — Letter to Trinity House, with reference to the correspondence about lights in Firth of Forth, and to the conference that passed between the deputation of the Elder Brethren and Commissioners, the Commissioners have resolved to erect a lighthouse on St. Abbs Head, on the spot fixed by the joint committee, and now ask for the statutory approval of the Elder Brethren. A copy of this letter has been transmitted to Board of Trade.

42. 26th May, 1858. — Letter from Trinity House, with copy of their letter to Board of Trade, communicating the concurrence of the joint committee on the proposed light at St. Abbs Head; and 2d June 1858, letter to Commissioners from Trinity House, enclosing the Board of Trade's approval, dated 31st May, 1858.

43. 20th January, 1859. — Butt of Lewis. Letter from Board of Trade, wishing the Commissioners to proceed with the proposed lights on Stourhead and Butt of Lewis.

47. None.
48. None.
49. Coastguard report every six months; favourable.
50. Commissioners, secretary, and superintendent.
51. April, June, July, August.
52. In November 1858 the light was extinguished for a few minutes by a lightkeeper, while being educated, going to sleep. He was dismissed.
53. One spare lamp in upper lightroom; oil in cellar under ground.
54. Rain gauge, barometer, and thermometer.
55. No.
56. No.
57. Occasionally.

126.

BELL ROCK, OFF FORFARSHIRE.

4. One light.
5. In 1793 Admiral Sir A. Cochrane called attention, but a special Act of Parliament was obtained in 1806, under which the lighthouse was erected.
7. To point out the position of the rock.
8. 1811.
9. Robert Stevenson, Engineer, under whose immediate superintendance the lighthouse was erected.
10. Sea light.
11. Stone, solid; painted every three years.
12. Yes; copper rod.
13. 117 feet.
14. 90 feet.
15. About 10 nautic miles.
16. About 16 nautic miles.
17. All round the compass.
18. Revolving alternate red and white.
19. Every two minutes.
20. From going away of daylight to return.
21. Catoptric.
22. First order.
23. None.
24. Clark, Edinburgh; Soho Works, Birmingham; Dove, Edinburgh.
25. Smoke tubes and air apertures.
26. A bell tolled outside the tower.
28. Twenty-four.
29. 61,331l. 9s. 2d.
30. Finished.
31. Dimensions of lantern: diameter, 11 $\frac{1}{2}$ feet; height, 8 feet. For price, see note to Drawing, No. 15, General Return.
32. No.
33. 17l. 11s. 5d., mostly by days' wage.
34. Every third year 8l. cost annually, not by contract.
35. Principal, 68l.; 1st assistant, 62l. 15s.; 2d assistant, 55l. 8s.; 3d assistant, 55l. 8s. Rations on the rock, and 4l. each for garden.
36. See note to Drawing, No. 4, General Return.
37. About 9l. 10s. annually.
38. 611 and 647 gallons, 12 gross cotton wicks, annually, circular web, 1 size.
39. Colza. 1857, 4s. 1 $\frac{1}{2}$ d.; 1858, 3s. 4 $\frac{1}{4}$ d.
40. 2l. annually; cotton wick, circular web, 1 size.
41. Not known.
42. Mercantile Marine Fund. Payment to Paymaster General.

Kirkaldy.	Tay.
Kirkwall.	Troon.
Leith.	Wick.

- V. BUOYS ARE NOT CLASSIFIED EXCEPT AS TO SIZE; A
 LIST IS GIVEN SEPARATELY. (See pages 190,
 191, *over leaf*.)
 VI. THE COMMISSIONERS USE THE CAN BUOY GENER-
 RALLY IN ALL POSITIONS.
 VII. NO. THEY ARE GENERALLY INSPECTED BY A
 BUOY MASTER, AND IF REPAIR IS REQUIRED,
 THEY ARE TAKEN AWAY AND ANOTHER SUB-
 STITUTED.
 VIII. ALL UNDER THE CHARGE OF ONE BUOY MASTER,
 WHO MAKES AN ANNUAL SURVEY.
 IX. BEACONS ARE NOT CLASSIFIED.
 X. SEE SEPARATE LIST, page 192.
 XI. NONE BEING SUBSTITUTED, BUT THE COM-
 MISSIONERS HAVE HAD VARIOUS SUGGESTIONS
 BEFORE THEM.
 XII. YES. See below, THE SYSTEM.

REPORT by the SECRETARY to the COMMISSIONERS of
 NORTHERN LIGHTHOUSES on the proposed establish-
 ment of a uniform Code of Buoy and Tide Signals.

In submitting to the Commissioners a proposal for the
 establishment of a uniform Code of Buoys, the reporter
 in the outset disclaims all pretence at originality of concep-
 tion; that and the suggestion of the system is due to
 Captain Bedford, R.N., Admiralty Surveyor, Oban, who
 brought it under the notice of the reporter.

All that the reporter has done—and even in this he has
 been much aided by Captain Bedford—is to carry out the
 system so as to make it generally applicable to all localities,
 and at the same time to keep it so simple in its nature as
 to render its misapprehension by mariners almost impos-
 sible.

Neither Captain Bedford nor the reporter were aware
 that the system had been adopted in France, and it is only
 since the arrangement now to be reported on was devised
 that the reporter has seen the French system. Captain
 Bedford, so far as known, has not yet seen it. The coinci-
 dences of the French system will be noticed in the progress
 of the Report.

§ 1.—BUOYS.

1. To mark the boundary of a main channel it is pro-
 posed that, on sailing inwards all buoys on the starboard
 hand should be coloured *red*, all buoys on the port hand
 coloured *black*. This arrangement is coincident with that
 found to be adopted by the French.

2. To indicate the turning point *seaward* it is proposed
 that the most seaward red and black buoy respectively
 should have in addition a mast and ball of corresponding

XII. (System.)

colour. This is indicated in France by a *white* buoy, but
 with the view of avoiding as much as possible the multipli-
 cation of colours, and keeping up simplicity, the mast and
 ball seem to be the preferable indication.

3. To indicate a small centre danger in the main channel,
 buoyed as above, it is proposed to place upon such danger
 a buoy chequered black and red, thus combining the two
 bounding colours to indicate pass either side. The French
 propose to indicate this by black and red *belts*. Either
 sign understood would be sufficient, but the reporter has
 reserved belted buoys for another purpose.

4. If the centre danger be of some size, and lies *across*
 the main channel, it is proposed to mark this by red and
 white chequered buoy at the port end, and by black and
 white chequered buoy at the starboard end; thus still pre-
 serving the distinctive colours. The French system does
 not provide for this.

5. If the danger extend *up and down* the main channel,
 it is proposed to mark this with buoys in red and white
 vertical stripes at the upper end, and black and white ver-
 tical stripes at the lower end. The French system does
 not provide for this. If the danger be large enough to
 call for it, Nos. 4 and 5 may be repeated in their respective
 localities.

One particular and very great advantage attending the
 adoption of a uniform system of buoyage is, that it does
 not signify how often the buoys are repeated. Thus, in a
 main channel the red and black buoys, like a chain of
 sentries, might with advantage, and without the slightest
 possible risk of confusion, be repeated every half mile, or
 even at shorter intervals; the same with the centre dangers.
 It is apprehended, therefore, that the five distinctions now
 given would enable the most intricate navigation to be
 buoyed with perfect accuracy, and that any mariner could
 pass through them with complete security.

At present, no doubt, where there are numerous or at
 least a choice of channels, it is of vast importance to the
 mariner to know which channel he is navigating, *because*
the buoys vary in the various channels; but if the uniform
 system be once adopted, this knowledge is of minor impor-
 tance, for whatever channel he is in, he is safe so long as he
 attends to the two bounding colours. He would also be
 at no loss to know what all the differently coloured buoys
 pointed out.

But this consideration has not induced the reporter to
 overlook the benefit of marking different channels, because
 there may be a variety of depths of water in different
 channels. Where they are at present indicated by lights,
 as at the entrance of the Thames, or by bell buoys or other
 distinctive marks, he would not propose to interfere with
 them. When buoys, however, are used, the reporter
 proposes.—

6. To indicate fairways, buoys coloured in belts, with the
 word "Fairway" in conspicuous letters, with the addition,
 if thought necessary, of the name of the channel. Thus,
 still keeping up the distinctive colouring—

1. Black and white belts would indicate port fairway.
2. Black and red belts centre fairway.
3. Red and white belts starboard fairway.

There are many additional distinctions which could be
 adopted for fairways.

The French in their system number the boundary buoys,
 equal numbers being affixed on red buoys, and unequal
 numbers on black buoys. Although it is easy to imagine
 cases in which numbers might prove useful, yet to make it
 an imperative portion of the system appears to the reporter
 to be too minute and intricate, divesting the system of that
 simplicity which it is so desirable to maintain. There can
 be no doubt of its applicability in many localities, and
 therefore it should not be prohibited. If it served no
 other purpose, it would more readily lead to the identifi-
 cation of buoys breaking adrift.

The reporter has considered the propriety of adopting
 some different and equally distinctive system for marking
 what may be termed *along-shore dangers* in contradistin-
 ction to the entrance or departure from harbours, bays,
 creeks, rivers, &c. &c. In this view he could have pro-
 posed distinctive colours to indicate the cardinal points of
 the compass; but on full consideration he has abandoned
 this as tending to perplex.

BUOYS AND BEACONS.

XII. (System.)

SCOTLAND.
Circular V.
Question
XII.

This last observation would apply to such a district as Yarmouth Sands, which may be called "an along-shore" danger; but he found it on consideration to be a much more simple course to fix whether Yarmouth Sands should be treated as the entrance to Yarmouth or the highway to London, and in either case to buoy it accordingly on the rules before given. On either supposition there would be no difficulty in carrying out the system in its integrity and rendering that intricate navigation more intelligible and secure than it is at present.

The reporter has the satisfaction of knowing that all practical seamen who have looked into the proposed system are satisfied of its advantages and of its applicability in all localities. One suggestion emanates from the French which is worthy of being noted, if not of being carried into practice, and that is where small rocks at the entrance to a port or bay come above the level of the sea, whether they should not be coloured on the same principle as the buoys.

§ 2.—BEACONS.

There can be no doubt that if the uniform colouring could be applied to beacons as well as buoys, it would prove exceedingly useful; but while in narrow channels the colouring could be adopted with great advantage, there are considerations which lead to considerable difficulty in its uniform and universal application; and if this last cannot be attained perhaps it would be better to leave dangers alone. In the majority of cases beacons mark dangers extending from the shore, and warn the mariner to keep off, so that with this knowledge *visibility* becomes of primary consequence, and some colours adopted in the particular positions of beacons would tend to impair this visibility. At all events the reporter has not been able to present a matured plan on this branch which he could at present with confidence recommend.

§ 3. TIDE SIGNALS.

The reporter has devised a system of signals to indicate the rise and fall of tides, with the depth of water, which is capable of being used at every harbour in the world day and night.

The chief instrument is a flagstaff at the entrance of the harbour.

A red ball *by day* at the masthead indicates the tide rising.

A green ball—the tide falling.

The depth of water is indicated in feet by the exhibition of white balls in varied positions, as specified in detail in a code given in the Appendix, No. 11.

The same signals are intended to be displayed by night with lamps instead of balls.

Danger—No signals by day or night.

Since the above system was devised the reporter has discovered that the French have a somewhat analogous system in operation. They indicate the rise and fall by *flags*, and depth by *black* balls, in varied positions. The reporter has no hesitation in rejecting this system. Flags are at best an uncertain signal, except when the wind blows across the direction of observation. Black has also been rejected, as it is not a colour available at night. For the sake of simplicity, it has been considered best to keep the colours for day and night signals alike.

The system has been rendered as simple as practicable. In the majority of cases a couple of white balls and two white lights will answer the whole purpose, while the indicating tidal colours at the masthead might be given by a *reversible disc* by day and *one reversible lamp* by night, as in railway signals.

There is another great advantage which would attend this system, that vessels in the offing could just as easily telegraph their draught of water as the depth could be signalled from the shore.

In an Appendix are given, in a tabular form, two codes, one for buoys and the other for tide signals. If the systems be ever adopted, these tables would form complete manuals in the hands of a mariner, which he could never mistake. Indeed, they are quite adapted for printing on most charts.

Submitted by

(Signed) ALEX. CUNINGHAM,

Edinburgh May 1858.

Secy.

APPENDIX No. 1.

Proposed CODE of UNIFORMITY in the Colour of Buoys for all Nations.

	Colour.	Purpose Served.	Sailing Direction in Entering.	Remarks.
1	Red - -	Bounding main chain l.	Keep on Starboard hand.	—
2	Black - -	Do. do.	Keep on Port hand.	—
3	Black and Red chequered.	To mark small centre danger.	Pass on either hand.	—
4	Red and White chequered.	Bounding Port end of centre danger across main channel.	On Starboard hand.	Never pass between No. 4 and 5.
5	Black and White chequered.	Bounding Starboard end of do.	On Port hand	—
6	Red and White vertical stripes.	Bounding Upper end of centre danger up and down channel.	On either hand	Never pass between No. 6 and 7.
7	Black and White vertical stripes.	Bounding Lower end of do.	On either hand	—
8	Black or Red mast ball.	An Elbow or Turnupoint in channel.	Pass according to colour as No. 1 and 2.	—
9	In Belts with the word "Fairway" in bold letters.	Fairways	On either hand	1. Black and White Port Fairway. 2. Black and Red centre do. 3. Red and White Starboard do.
10	Green - -	Wreck.	—	—

APPENDIX No. 2.

Proposed CODE of UNIFORM SIGNALS for all Harbours.

Flagstaff and Balls—By Day.

Tide Flowing—Red Ball at masthead.

Tide Ebbing—Green Ball at masthead.

Depth of Water indicated, both Rise and Fall.

- 10 Feet—White Ball, half mast.
- 12½ Feet—Do. do. full height.
- 15 Feet—Second White Ball, half mast.
- 17½ Feet—Two White Balls, full height, placed vertically.
- 20 Feet—Third White Ball, half mast.
- 22½ Feet—Three White Balls, vertical.
- 25 Feet—Two White Balls, horizontal.
- 27½ Feet—Third White Ball, half mast.
- 30 Feet—Three White Balls, triangle.

Flagstaff and Lamps by Night.

The same signals as by Day, with similarly coloured Lamps instead of Balls.

Danger—No signals by Day or Night.

NOTE.

The preceding Report having been submitted to the Commissioners, they directed it to be circulated with the following Letter to Shipmasters and others. It is now printed with the Answers which have been received.

Northern Lighthouse Office,
Edinburgh, 1858.

Sir,—The secretary having recently submitted to the Commissioners of Northern Lighthouses a Report on his proposed Code of Uniform Buoys and Tide Signals, the Commissioners have resolved to take the opinion of practical seamen on the proposal, and I am now directed to send you a copy of the Report.

The Commissioners will esteem it a favour if you will state in a letter to me whether you approve or disapprove of the proposed schemes, and if you will at the same time offer any suggestions or improvements which may occur to you. In considering the general applicability of the scheme, the Commissioners are very desirous that you should keep in view such localities as Yarmouth Sands and the entrance to the Thames, and any other dangers of similar description and extent with which you may be acquainted.

I am, Sir,

Your most obedient Servant,
(Signed) ALEX. CUNINGHAM, Secy.

SCOTLAND.

Circular V.
Question
XII.

XII. (System.)

ANSWERS.

Inveresk, by Musselburgh,
28th June, 1858.

Sir,—Having carefully perused and well considered all the propositions laid down in the Report by the Secretary to the Commissioners of Northern Lighthouses, on the proposed establishment of an uniform code of buoy and tide signals, I have the honour to give it as my professional opinion (as requested by the Honourable Commissioners) that I consider the Report quite clear, the suggestion contained in it quite simple, and easy to be understood; and I have no further observations to make than that I hope to see the "Code" universally adopted; and I wish the good work the success it deserves.

I am, &c.,
(Signed) GEORGE B. JEFFREYS,
Inspecting Commander, Coast Guard.

Old "Pharos" Steamer,
Granton, 28th June 1858.

Sir,—I have carefully perused the Report made by you to the Commissioners of Northern Lighthouses on the proposed establishment of an uniform code of buoy and tide signals, and beg leave to say that I quite approve of its general application to all localities; its uniformity and simplicity make it easily understood and retained in memory—a thing of the utmost importance at all times when navigating intricate channels. Where long and crooked channels exist, I think it would be desirable to number the buoys, as in hazy weather it is important to know how far a vessel has advanced up or down, the number on the buoy would at once make it known. I consider it an important advantage of the tide signals that a vessel can show her draught of water under the same uniform code. What you propose to adopt is quite serviceable for any port or harbour, and is enhanced in importance by being as easily distinguished by night as by day.

I am, &c.,
(Signed) WILLIAM WATT.

11, Portland Place,
3d July 1858.

Sir,—I beg to inform you that I have read over the Report which you sent to me yesterday, and that I fully concur in the plans there laid down. The system of buoyage appears to me so plain and simple, that any one may at a glance understand it without danger of making a mistake; and when a stranger, under the old system, would have to have continued recourse to his chart or book of directions, he could, under the new system, run in with perfect confidence and safety. At the same time I think that, where there are two or more channels, the buoys belonging to each should be marked with the name of the channel to which it belongs. With regard to the outer buoy, there is no doubt that one with a mast and ball is the best, as it would be seen farther, the black one especially. Fully concurring, as I do, in your plan, which I have discussed with several shipmasters before seeing the Report, I have only to suggest, that where any abrupt bend may occur in any channel, that the buoy there placed should be distinguished, keeping still the same colours, they might be of a different shape from those either above or below.

I may here remark, that the river Elbe is buoyed on nearly the same plan, the colours being white and black; and I know of no place of equal danger that I would run into without a pilot as into the Elbe, after having got sight of the outer buoy.

With regard to the tide signals, there is no doubt but that balls are preferable to flags, for, when the wind is either blowing to or from the flagstaff, they cannot be well seen; or of course the balls could be seen in any position.

With these remarks, and having no doubt but that your plan will meet with the approbation of all nautical men,

I am, &c.,
(Signed) ROBERT WRIGHT.

3, Harold Terrace, Fairfield Road, Bow,
5th July 1858.

Sir,—I beg to acknowledge receipt of your favour of 2d inst., requesting my opinion on your proposed system of uniform buoys and tide signals.

I have carefully examined the Report enclosed, and I consider the arrangement which you advocate to possess great advantages over the present system, chiefly on account of its simplicity, enabling mariners to navigate any channel without reference to their chart. The scheme would, in my opinion, be eminently adapted to such localities as Yarmouth Roads and the entrance to the Thames.

BUOYS AND BEACONS.

XII. (System.)

I do not think anything better, to indicate the turning point seaward in a main channel, can be suggested than what you propose in rule 2.—viz., a red buoy with a mast and ball of corresponding colour for the starboard side, and a black buoy with a mast and ball of same colour for the port side.

With reference to the signals for indicating a centre danger in a main channel, provided for in clause 3, I think they are all that can be desired; and the same may be said of the buoys for indicating a centre danger of any size in a main channel, and the direction in which it lies, provided for in clauses 4 and 5.

Your system of tide signals, both by day and night, appear to me to be remarkably simple, and with your code in his hand no master would have any difficulty in understanding them.

In conclusion, permit me to say, that I do not think I can suggest anything which will be an improvement on your scheme, as every point seems to have been well considered by you.

I am, &c.,
(Signed) DAVID MEIKLEREID.

H.M.S., "Jackall," Granton,
8th July 1858.

Sir,—In answer to your letter of the 6th inst., I beg to state that I fully approve of the proposed scheme. The want of an uniform code of buoys has long been felt; it is in every way most desirable and necessary. I do not see that I can suggest any improvements.

I am, &c.,
(Signed) C. T. W. G. CERJAT.

Trinity House, Leith,
9th July 1858.

Sir,—I duly received your communication of 2d inst., on the proposed establishment of an uniform code of buoy and tide signals.

After a careful perusal, I very much approve of the same. I would, however, take the freedom of suggesting that, in a long line of course, in a fairway in one direction, at any spot where such course has to be changed several points, a distinguishing buoy might there be placed to indicate the change, say a red and white striped buoy on the starboard, and black and white on larboard hand, which would still preserve the marking colours.

I am, &c.,
(Signed) WALTER PATON.

Trinity House, Dundee,
27th July 1858.

Dear Sir,—Mr. Welch, the Master of the Trinity House, submitted your letter, of the 2d current, to a meeting of the acting committee held to-day, and I refer you to the annexed excerpt from their minutes, showing the resolution come to, which I trust is satisfactory to you.

I am, &c.,
(Signed) JAMES M'EWEN, Sec.

Excerpt from Minutes of Meeting of the Committee of the Fraternity of Masters and Seamen in Dundee, held in the Trinity House, on the 27th day of July 1858.

"The boxmaster laid before the meeting a circular letter which he had received from Alexander Cunningham, Esq., Secretary to the Commissioners of Northern Lighthouses, of date the 2d current, relative to a Report by him on his proposed code of uniform buoys and tide signals, and which Report the Commissioners wished laid before practical seamen for their opinion; the relative Report was read, and the meeting having considered the matter, resolved to approve of the proposed schemes by Mr. Cunningham, and the secretary was instructed to write to him accordingly, with an extract of the minute."

Oban, 5th August, 1858.

My dear Sir,—I beg to inclose a letter from my brother, Captain G. Bedford, on the subject of your Report. He commands a survey on the west coast of Ireland, and has done so for a long time, besides having served in Canada and Africa. You are at liberty to make any use of it you please. I hope soon to hear of other favourable returns from you. In haste,

Yours, &c.,
(Signed) E. J. BEDFORD.

My dear Edward,—I have read Mr. Cunningham's pamphlet on the proposed establishment of an uniform code of buoys and tide signals with much satisfaction, and

Question
XVII,
XVIII.

I give the principle my hearty approval, from a conviction that it is calculated to be of great advantage to the coast and harbour navigation. I congratulate you, as the suggester of this useful scheme, in having found such an able and liberal co-operator as Mr. Cunningham seems to be.

With reference to the scheme proposed, I would remark that, in buoying a complicated place, such as the numerous creeks and channels off North Yarmouth and Lowestoft, some greater variety than that of colour seems to be required to indicate the particular channel, as well as its limits; and I am disposed to name as well as number the buoy, which would not impair the simplicity of the system, as these additional distinctions may be disregarded provided the vessel's position is known; while, in the event of a fog, or other casualty, limiting the vision to a small distance, the sight of a buoy so numbered or named, and marked on the chart, would at once indicate the whereabouts, and enable the vessel to be steered for the next. Where several buoys are required to mark a channel or danger, I conceive this precaution would be useful.

In long and narrow channels, such as Lough Foyle, leading to Londonderry, it is evident that buoys become of little service during dark nights, and to render them available at such a time coloured lights must be substituted. It seems to me desirable that uniformity of colour be maintained; but as black is excluded from lights, and the use of another colour would interfere with the principle of the system, why not substitute green buoys for black, and then have green lights, by which the day and night colours would be kept alike?

Both in Belfast and Lough Foyle, the channel is marked by pile beacons, painted in distinctive colours, and exhibiting coloured lights at night.

There would be no difficulty in making these lights indicate their position, by using transparencies, either in number or name.

Yours, &c.,
(Signed) GEO. AUGUSTUS BEDFORD.

Addressed, Capt. Bedford, R.N.

XIII.

1. STROMA BEACON.

11th July 1853.—Application from Lloyd's for a beacon on Stroma.

15th July 1853.—Remitted to engineer, to report.

1st August 1853.—Reply to Lloyd's, by secretary, stating that the Commissioners have long had under consideration the desirability of placing a beacon on Stroma, and that they had now ordered a survey and estimate to be prepared, in the view of considering whether it may be embraced in the works for next year.

15th December 1854.—Report by engineer, and submitting survey.

18th December 1854.—Letter to Trinity House with plan and report, and requesting statutory sanction.

10th January 1855.—Answer from Trinity House, approving of beacon.

13th January 1855.—Sanction of Board of Trade obtained for beacon in estimate of 1855.

8th November 1855.—Letter from Board of Trade wishing plan of beacon.

21st November 1855.—Answer by secretary, transmitting ditto.

2. SOUND OF ISLAY.

11th April 1854.—Letter from Board of Trade transmitting copy letter from Admiralty enclosing copy report by Captain Bedford, as to desirability of placing a beacon on western head of Black Rock, and also one upon the Culean Rocks.

10th May 1854.—Commissioners remit to engineer for his report, and direct secretary to send copy of Captain Bedford's report to Trinity House, in order that they may have the subject before them when visiting that part of the coast.

11th May 1854.—Letter by secretary to Trinity House in conformity.

3. KILCHOAN.

31st May 1854.—Letter from Mr. Robertson, Kinloch Moidart, as to desirability of a beacon at Kilchoan.

7th June 1854.—Answer by secretary stating that Commissioners do not undertake the erection of buoys of so purely local a character.

15th June 1854.—Reply by Mr. Robertson stating that he cannot look upon a beacon as of so purely a local cha-

acter as the Commissioners, and suggesting that they ought to consult Captain Otter, R.N., or their own officials.
21st June, 1854.—Commissioners consider it unnecessary to do more in the matter.

4. KYLES OF BUTE.

5th October 1854.—Application from Mr. Campbell Ormisdale, for buoy to be placed on rock at entrance to Loch Riddan.

18th October 1854.—Commissioners remit to engineer to report.

18th October 1854.—Reply by secretary to Mr. Campbell, stating that his application had been remitted to engineer for his report, but that Commissioners apprehended it was of too private and local a character to be undertaken by them.

26th October 1854.—Answer from Mr. Campbell, further explaining position of rock, and suggesting that if Captain Bedford were consulted, the Commissioners would be satisfied it was a matter of public utility.

1st November 1854.—Report by engineer on application, and stating that a buoy would no doubt be useful, but ought to be placed and maintained by those having charge of the harbour.

1st November 1854.—Commissioners remit back to engineer, with instructions to communicate with Captain Bedford.

2nd November 1854.—Reply by secretary to Mr. Campbell, stating that the matter had been remitted back to engineer, with directions to communicate with Captain Bedford.

14th November 1854.—Report by engineer with letters from Mr. Campbell and Captain Bedford enclosing a tracing, and stating if a red or chequered buoy were placed as indicated, it would greatly benefit navigation.

29th November 1854.—Application of Mr. Campbell refused, but remit to engineer, to inquire into the expediency of mooring buoys (as part of the general system) throughout the Kyles of Bute.

29th November 1854.—Letter from secretary to Mr. Campbell intimating decision of Commissioners.

23d September 1858.—Report by engineer stating that 2 red buoys on South Channel and a black buoy on north side would complete the buoyage in the most perfect manner.

20th October 1858.—Letter to Trinity House requesting statutory sanction.

26th October 1858.—Answer from do., approving.

3rd November 1858.—Letter from Board of Trade as to expense of buoys.

9th October 1858.—Reply by secretary stating that each buoy will cost from 16*l.* to 18*l.*

5. BLACK ROCKS, LEITH.

17th October 1854.—Application from Mr. Inkster, Leith, for a beacon on the Black Rocks.

23d October 1854.—Report by engineer stating that it ought to be erected by those having charge of the harbour.

1st November 1854.—Secretary directed to refer Mr. Inkster to Leith Dock Commissioners.

6. LOCHS INVER AND INCHARD.

27th March 1855.—Letter from Mr. Mc Iver, Scowrie, as to desirability of placing a perch on rock at entrance to Loch Inchard.

6th April 1855.—Letter from do. as to do. at Loch Inver.

23rd April 1855.—Commissioners remit the above to engineers to report.

3d October 1855.—Report by engineers stating that they consider an iron spur beacon would be of very great service to vessels frequenting Loch Inver, if erected on Bocoalas Rock; and regarding Loch Inchard, as the rock is too low to admit of the adoption of a beacon, a buoy might prove useful to vessels taking shelter during westerly gales.

10th October 1855.—Commissioners of opinion that application should be granted.

12th October 1855.—Letter to Trinity House requesting statutory sanction for beacon on Loch Inver and buoy on Loch Inchard.

12th October 1855.—Letter to Board of Trade, transmitting copy letter to Trinity House, and stating that should my Lords approve, the Commissioners propose to use an iron spur beacon prepared for another site, but not erected in consequence of the Board of Fisheries having placed a beacon on site alluded to.

17th October 1855.—Answer from Trinity House approving of do.

26th October 1855.—Answer from Board of Trade approving of do., and requesting that plans may be furnished of the intended sea marks.

BUOYS AND BEACONS.

XVII. & XVIII.

SCOTLAND.
Circular V.
Question
XVII.
XVIII.

29th October 1855.—Reply to Board of Trade stating that Commissioners had transmitted chart showing position of sea marks to Elder Brethren, and understood that they would have forwarded it to my Lords, and requesting to be informed whether in future any charts, &c. would require to be transmitted in duplicate.
3d November 1855.—Answer from Board of Trade stating that one copy will be sufficient.

7. LIPPA ROCK.

25th May 1855.—Petition from Fishermen, &c. of Orkney for replacing a buoy on Lippa Rock.
30th May 1855.—Engineers to report why buoy was removed, and how it can be replaced.
23d October 1855.—Report by engineers stating that buoy having of necessity been moored in a very rapid tide-way, caused it to *ride under*, and it was considered proper in consequence to discontinue it, but should its restoration be considered essential, it might be possible to design such a buoy as would obviate the effects of the rapid tide-way.
24th October 1855.—Engineers to report whether the restoration of the buoy is essential.

8. BROAD EBB.

10th October 1855.—Petition from shipmasters, Orkney, for a buoy on Broad Ebb.
10th October 1855.—Commissioners remit ditto to engineers to report.
23d October 1855.—Report by Messrs. Stevenson, stating that a buoy there would be very useful.
24th October 1855.—Letter to Trinity House requesting statutory sanction.
24th October 1855.—Letter to Board of Trade transmitting copy letter to Trinity House, and requesting sanction.
30th October 1855.—Answer from Board of Trade conveying approval.
31st October 1855.—Ditto from Trinity House ditto.

9. VASA.

10th October 1855.—Petition from shipmasters, Orkney, for a beacon on Vasa.
10th October 1855.—Commissioners of opinion petition should be granted.
24th October 1855.—Letter to Trinity House requesting statutory sanction.
24th October 1855.—Letter to Board of Trade ditto.
31st October 1855.—Answer from ditto approving of ditto.
31st October 1855.—Answer from Trinity House approving of ditto.
9th January 1858.—Letter from Mr. Baikie, Kirkwall, stating that beacon, being a skeleton one, is nearly useless.
12th October 1858.—Report by Messrs. Stevenson on ditto, and proposing to place a larger ball upon it than at present.

10. SOUND OF SANDA.

1st November 1855.—Letter from Board of Trade transmitting copy letter from Glasgow Local Marine Board, suggesting that a buoy or beacon should be placed on the rocks near Sanda, on which the "Myrtle" steamer struck on 3d August 1854.
8th November 1855.—Commissioners remit ditto to engineer to report.
18th November 1855.—Report by engineer, recommending that the request of Glasgow Local Marine Board be acceded to.
22d December 1855.—Letter to Board of Trade, stating that Commissioners are quite ready, on my Lords' sanction being signified, to moor a buoy on the rock in question.
31st December 1855.—Answer from Board of Trade, requesting plan showing position of proposed buoy.
7th June 1856.—Reply by secretary, transmitting sketch of Mull of Kintyre, and showing position of buoy.
11th June 1856.—Answer from Board of Trade approving, but suggesting that it be placed nearer the shore, and changed in colour.
12th June 1856.—Commissioners direct Messrs. Stevenson to report.
15th June 1856.—Report by Messrs. Stevenson, differing from Board of Trade's suggestions.
30th June 1856.—Commissioners direct secretary to write to Board of Trade in conformity.
14th February 1856.—Letter to Board of Trade regarding ditto.
20th February 1856.—Answer from ditto, stating that my Lords do not wish to fetter the Commissioners' decision in this matter.

11. CAIRNBURG BRIGGS.

28th November 1855.—Report by secretary, stating, that at intervals from 1840 to 1852, this place had been before the Board without any decision having been come to, and pointing out the desirability of erecting a beacon on ditto.
29th November 1855.—Commissioners resolve to erect a beacon, and remit to Messrs. Stevenson to report on site.
29th January 1856.—Report of Messrs. Stevenson, with plan of proposed site.
30th January 1856.—Application to be made to Trinity House and Board of Trade for statutory sanction.
31st January 1856.—Letter to Trinity House requesting ditto.
31st January 1856.—Ditto to Board of Trade ditto.
8th February 1856.—Reply from Trinity House approving.
19th February 1856.—Ditto from Board of Trade, wishing to know expense of beacon before approving.
20th February 1856.—Messrs. Stevenson to prepare estimate.
21st February 1856.—Letter from Messrs. Stevenson stating that they shall revisit the rock before giving an estimate.
21st February 1856.—Letter to Board of Trade as to Commissioners incurring this expense before the work is sanctioned.
25th February 1856.—Reply from Board of Trade, wishing estimate as soon as it can be furnished, which they think can be done without the engineers proceeding to the spot.
27th February 1856.—Commissioners direct Messrs. Stevenson to furnish estimate, and, if necessary, proceed to the spot.
15th November 1856.—Report by Messrs. Stevenson proposing beacon to be of cast-iron, and estimating cost at about 1,000*l*.
20th November 1856.—Letter to Board of Trade stating estimated cost.
9th December 1856.—Application from shipmasters of Frazerburgh for beacon on Cairnburg Briggs.
24th December 1856.—Commissioners direct secretary to transmit ditto to Board of Trade.
29th December 1856.—Reply from Board of Trade to secretary's letter of 20th ultimo, stating that estimated expense appears to be large, and asking whether a cast-iron beacon, or a skeleton beacon with ball, would best serve the purpose.
7th January 1857.—Answer by secretary, stating that it is a cast-iron skeleton beacon which is recommended.
13th January 1857.—Reply by Board of Trade, requesting plans to be submitted for approval of Trinity House.
15th January 1857.—Answer by secretary, stating that plans had been already submitted to Trinity House, and their approval signified.
23d January 1857.—Reply from Board of Trade wishing plans.
29th January 1857.—Answer by secretary, transmitting sketch of beacon.
31st January 1857.—Letter to Trinity House for sanction to kind of beacon.
5th February 1857.—Reply from Trinity House conveying ditto.
27th February 1857.—Letter from Board of Trade sanctioning beacon, but reduced in height.
9th March 1857.—Report by Messrs. Stevenson, with plan of smaller beacon, and stating that it will neither be so well seen, nor will it afford the same means of shelter, in the event of persons being cast ashore on the rock, as the beacon formerly proposed.
11th March 1857.—Commissioners direct secretary to write to Board of Trade, explaining their preference for larger beacon; but remit to Messrs. Stevenson to proceed with plans of smaller one, and to the secretary to take tenders for its construction.
9th April 1857.—Report by Messrs. Stevenson on tenders, and recommending Messrs. Milne and Son.
17th April 1857.—Letter from Board of Trade accepting tender of Mr. Douglas.
24th April 1857.—Letter from Mr. Douglas wishing to withdraw his tender.
25th April 1857.—Letter to Board of Trade as to Mr. Douglas' withdrawal.
4th May 1857.—Reply by Board of Trade releasing Mr. Douglas from his engagement, and requesting that Mr. Scott's offer be accepted.
7th May 1857.—Answer by secretary, stating Commissioners' opinion that Mr. Scott's offer should not be accepted.
12th May 1857.—Reply by Board of Trade, stating they

Question
XVII.
XVIII.

cannot accept of Messrs. Milne's tender when a lower can be had.

22d May 1857.—Answer by secretary, stating, that having submitted to my Lords the reasons which induced them to form a decided opinion against the acceptance of Mr. Scott's offer, they consider they have discharged their duty, and that he had applied to Mr. Scott to know whether he adhered to his offer.

17th June 1857.—Contract with Mr. Scott entered into.

12.—LOCH FYNE.

5th December 1855.—Application from Board of Fisheries for buoy on Big Rock.

6th December 1855.—Report by buoy master, stating that it is unnecessary to place a buoy off the rock referred to.

7th December 1855.—Letter by secretary to Fishery Board in conformity.

13.—SOUND OF SKYE.

21st May 1856.—Letter from Messrs. Hutchison and Co., about necessity of having beacons on west coast.

28th May 1856.—Commissioners direct Messrs. Stevenson to report on ditto.

6th November 1856.—Report by Messrs. Stevenson that various rocks should be marked, and recommending a buoy on the Gulanre Rock, a buoy for the McMillan Rock, a beacon for the Gohblach Reef, Pabba, and either a buoy or beacon for Skeriderrick.

13th November 1856.—Letter to Board of Fisheries intimating that applications for beacons and buoys in Sound of Skye were granted.

13th November 1856.—Letter to Board of Trade transmitting charts, showing positions of dangers proposed to be marked, and requesting sanction.

29th December 1856.—Answer from Board of Trade requesting copy of Messrs. Stevenson report before giving sanction.

7th January 1857.—Letter to Board of Trade transmitting copy of engineers' report.

10th January 1857.—Answer from Board of Trade calling attention of Commissioners that proposed works have not been laid before the Trinity House, and suggesting whether a buoy on the Gohblach Reef would not answer the purpose as well as the expensive beacon proposed by engineers.

15th January 1857.—Letter to Trinity House transmitting copy of Commissioners' communication to Board of Trade and tracings of relative chart, with a request for their statutory sanction.

22d January 1857.—Answer from Trinity House sanctioning buoys on Gulanre and McMillan's Rock, but wishing further information as to Gohblach.

28th January 1857.—Commissioners delayed till sanction of Board of Trade was signified.

17th June 1857.—Messrs. Stevenson to proceed with buoys and beacons in this ground.

1st July 1857.—Messrs. Stevenson to prepare plan of beacon at Pabba.

4th September 1857.—Letter to Board of Trade with tenders for ditto.

15th September 1857.—Answer from Board of Trade approving of Mr. Dove's offer being accepted.

14.—SCARGUN SHOALS.

31st December 1857.—Petition from shipmasters at Kirkwall, and letters from Oban and Leith requesting buoy on ditto.

11th January 1858.—Letter to Trinity House stating that Commissioners are of opinion application should be granted, and requesting their statutory sanction.

13th January 1858.—Answer from Trinity House approving of ditto.

27th January 1858.—Letter from Board of Trade ditto.

15.—SALEN

20th March 1858.—Application for buoy in Bay of Salen.

25th March 1858.—Letter to Trinity House stating that Commissioners are of opinion application should be granted, and requesting statutory sanction.

25th March 1858.—Letter to Board of Trade ditto.

31st March 1858.—Answer from Trinity House conveying sanction, and recommending a large buoy.

1st April 1858.—Ditto from Board of Trade approving sanction.

16.—LOCH CROAG.

8th April 1858.—Application for buoys to mark the entrance to Loch Croag in Mull.

12th April 1858.—Letter to Captain Bedford asking him to favour Commissioners with his opinion on application.

12th April 1858.—Letter to Captain Sinclair, "Skerryvore" tender, ditto.

14th April 1858.—Answer from Captain Bedford stating that the bay is so studded with rocks and the shelter so imperfect that he could not advise Commissioners to offer any inducement to the general trader seeking it for refuge.

22d April 1858.—Reply from Captain Sinclair doubting very much the practicability of mooring a buoy there.

27th April 1858.—Commissioners refuse application.

17.—TUISDALE.

28th April 1858.—Application from shipmasters, Isle of Man, for a beacon in Calf Sound.

13th May 1858.—Report by Captain Anderson agreeing entirely with application, and stating it would be of immense advantage, and add greatly to the safety of vessels passing through the Sound.

15th May 1858.—Letter to Trinity House transmitting application, and requesting statutory sanction.

19th May 1858.—Letter from Trinity House conveying sanction, and transmitting copy letter from Board of Trade to them also approving.

22d September 1858.—Report by Messrs. Stevenson recommending that an iron pillar beacon be erected.

20th October 1858.—Letter to Board of Trade stating that Messrs. Stevenson's estimate cost of beacon at about 800*l*.

3d November 1858.—Answer from Board of Trade wishing sketch of beacon and rock, showing its height, &c.

8th November 1858.—Reply by secretary, transmitting sketch.

18th November 1858.—Answer from Board of Trade inquiring whether a smaller beacon would not be sufficient, as it appears to them, one 20 feet high would do; and if so, requesting an amended estimate.

23d November 1858.—Reply by secretary, stating that Commissioners do not concur in the views expressed by my Lords, and giving special reasons for such.

6th December 1858.—Answer from Board of Trade stating that, after full inquiry and deliberation, they think it unnecessary to incur so much expense, and requesting an amended estimate for a beacon without cage on top.

8th December 1858.—Report by Messrs. Stevenson stating that the saving effected by omitting the cage would be only about 16*l*., and submitting plan of a malleable iron beacon 25 feet in height, at an estimated cost of 400*l*.

10th January 1859.—Reply to Board of Trade transmitting engineer's report and tracing.

14th January 1859.—Answer from Board of Trade requesting to know why Messrs. Stevenson propose that the beacon should be of malleable instead of cast iron, as before proposed, and if the 400*l* is estimated to cover the whole expense of erecting as well as constructing.

17th January 1859.—Letter from Mr. Stevenson in answer giving explanations as to ditto.

24th January 1859.—Answer from Board of Trade requesting to be informed whether Messrs. Stevensons' hesitation about security of the beacon arises wholly from the fact of its exposure to a heavy sea.

25th January 1859.—Reply by secretary stating that it is partly so, and partly from the new material of beacon.

7th February 1859.—Answer from Board of Trade approving of a malleable iron beacon in accordance with tracing sent in letter of 10th ult.

22d February 1859.—Report by Messrs. Stevenson on tenders for beacon, and recommending Messrs. Tods' offer.

24th February 1859.—Letter to Board of Trade transmitting tenders.

1st March 1859.—Answer from Board of Trade approving of Messrs. Tods' tender being accepted.

18.—LONG CRAIG.

2d July 1858.—Application for a beacon on Long Craig, Kirkaldy.

29th November 1858.—Report by engineers stating that the danger can be advantageously marked only by a buoy moored at the outer extremity of the reef.

30th November 1858.—Letter to Trinity House requesting statutory sanction for ditto.

7th December 1858.—Reply from Trinity House conveying sanction.

11th December 1858.—Letter from Board of Trade approving ditto.

19.—LOCH ERRIHOL.

28th June 1858.—Application for a beacon or buoy on Loch Errihol.

28th June 1858.—Remitted to Captain Anderson to report.

20.—ARISAIG.

24th February 1859.—Letter from Board of Trade with enclosures for a beacon at Arisaig.

- SCOTLAND. XVII. & XVIII. BUOYS AND BEACONS. XVII. to XXI. SCOTLAND. Circular V. Question XVII., XVIII.
- 10th March 1859.—Reply by secretary, stating that beacon would be of no benefit to vessels passing, and that no beacon of any permanent character could be erected for 5*l*.
21. APPIN.
- 9th September 1858.—Letter from Captain Bedford as to buoying rocks in ditto.
- 9th February 1859.—Report by Messrs. Stevenson on ditto, with tracing of Sound, and stating that they think a 7½-foot buoy would be sufficient for the Black Rocks, and that a beacon should be placed on the Brander Rock.
- 10th February 1859.—Letter to Trinity House requesting their statutory sanction for a buoy on Black Rocks and a beacon on Brander Rock.
- 2nd March 1859.—Reply from Trinity House conveying sanction.
- 7th March 1859.—Letter from Board of Trade approving, and requesting that an estimate of the probable cost may be furnished.
- 10th March 1859.—Answer by secretary stating that the buoy is estimated to cost 40*l*., and the beacon from 150*l*. to 160*l*.
- 14th March 1859.—Reply by Board of Trade requesting to be informed whether the sum of 150*l*. to 160*l*. for the beacon is estimated to cover the whole cost of construction, including fixing, and whether a beacon like Calliach, which only cost 120*l*., would not be sufficient.
- 24th March 1859.—Answer by secretary, stating that the estimate includes carriage and fixing, as usual; and that, while the beacon on Appin Sound is similar to Calliach, the addition to the estimated cost is mainly caused by the additional cleading which is required for the nature of the situation.
- 29th March 1859.—Reply by Board of Trade approving, and requesting tenders to be invited.
- 15th April 1859.—Letter to Board of Trade with tenders, and recommending that Messrs. Slight's offer be accepted.
- 20th April 1859.—Reply from Board of Trade approving ditto.
22. GENERAL SYSTEM OF BUOYAGE.
- 18th November 1857.—Excerpt Report by Secretary.
- “An understanding has for some time prevailed in the mercantile service, that all buoys on entering port should be coloured red for the starboard hand and black for the port hand, while chequered buoys should mark centre dangers. Captain Bedford having urged very strongly that effect should be given to this arrangement with the Commissioners' buoys, the reporter took the opportunity to do so while repainting and shifting them this season. The changes have proved somewhat extensive; but, beyond the expenses of the notices have not called for any outlay. During the ensuing season, so far as not already accomplished, effect will be given to the approved arrangement, which is exceedingly simple, and cannot fail to prove most acceptable to the mariner. The reporter submits further, whether it would not be desirable to call the attention of local authorities to this change, such as the Clyde and Tay Trustees, and get them to follow the improved system.”
- 17th February 1858.—Letter to Trinity House, Dundee, suggesting the adoption of new system of buoyage in river Tay.
- 17th February 1858.—Letter to Clyde Trustees as to ditto on river Clyde.
- 18th February 1858.—Letter to Admiralty regarding its universal adoption.
- 25th March 1858.—Letter to Trinity House, London, transmitting 10 copies of a notice to mariners regarding ditto.
- 14th April 1858.—Reply from Trinity House, acknowledging receipt of notices, and regretting that Commissioners did not afford them an opportunity of offering an opinion on the subject before the plan was finally adopted and published, and offering suggestions, not with the view of condemning the system adopted by the Commissioners, but of explaining the grounds upon which the Elder Brethren regret that an opportunity was not afforded them of expressing their opinion on the subject.
- 28th April 1858.—Reply by secretary, pointing out how system was introduced, and that the Commissioners were unaware that the attention of the Elder Brethren had not been likewise called to the approved system, regretting that the adoption of such an important change should have come only incidentally before them upon a casual communication of the Commissioners, and thanking them for their observations.
- 9th June 1858.—Report by secretary on subject of the proposed uniform code of buoys and tide signals submitted to Commissioners, and authorized to be printed in the view of circulating it extensively to practical seamen for their opinions and suggestions.
- 18th October 1858.—Secretary reported to Commissioners that he had distributed copies of his report on uniform system to different parties, and he submitted their various answers.
- 18th October 1858.—Secretary authorized to get same printed.
- XVIII. Included in the above.
- XIX. Buoy master and secretary.
- XX. Buoy master and secretary.
- XXI. Advertisement.
- CORRESPONDENCE with BOARD OF TRADE regarding advertising NEW LIGHTHOUSES, &c.
- 1.—Letter from Board of Trade.
- London, 3rd May 1858.
- Sir,—I am directed by the Lords of the Committee of Privy Council for Trade, to request that you will draw the attention of the Commissioners of Northern Lighthouses to the large expenditure incurred in the Accounts for the Quarter ending 31st December last, for postages of foreign and colonial letters containing advertisements of the opening of the new lighthouses, amounting to the sum of 12*l*. 13*s*. 7*d*.
- My Lords direct me to state that, on inquiry at the Trinity House as to the practice of the Elder Brethren on such occasions, the following reply has been received:—
- “Notices to mariners are sent by book post from the Trinity House to the outports in England, to the Commissioners in Edinburgh, and to the Corporation in Dublin, also to the consuls in London for distribution or publication in their respective States. The postage is calculated to be about 1*l*. per 1000 notices (i.e., copies of a notice), and the number issued for an important light is from 2,000 to 3,000.”
- My Lords, therefore, are of opinion that so large an expenditure as that incurred by the Commissioners of Northern Lighthouses for this service is not necessary; and I am to request that you will move the Commissioners to adopt the practice of the Trinity House in all future cases.
- I am, &c.,
(Signed) T. H. FARRER.
(Addressed) The Secretary Commissioners of Northern Lighthouses.
- 2.—Answer by Secretary to Board of Trade.
- Northern Lighthouse Office,
Edinburgh, 13th May, 1858.
- Sir,—Having laid before the Commissioners of Northern Lighthouses my Lords' letter of the 3rd current, on the subject of notices of new lights, I am directed to state that since 1846 the Commissioners have been in use to send copies of their notices:—
1. To the public Boards of Great Britain connected with shipping.
 2. To all chart publishers so far as known.
 3. By advertisement in all the newspapers published in maritime ports of the United Kingdom.
 4. By hand bills circulated to the collectors in Scotland, England, and Ireland, in the different ports, for distribution among mariners.
 5. 500 copies to the India House for circulation in India.
 6. To all the consuls of foreign powers resident in London.
 7. To British consuls at foreign ports.
 8. To collectors of customs at colonial ports.
- Nos. 5, 7, and 8 (the cost of which in postage is now adverted to) were, in 1846, by order of the Commissioners, added to the intimations issued by them. The matter at that time had attracted a great deal of attention, and formed the subject of great discussions in Parliament, arising from the loss of the “Great Britain” in Dundrum Bay (alleged cause, the want of a notice of the new light at St. John's), the loss of an Indianman in the Solway, from not having seen the notice of Little Ross, and mistaking it for a light in the Clyde, and, from a representation made by an officer of the French navy coming up the Moray Firth from Iceland being misled by Corseca, not having seen the notice of its exhibition.
- Such were the reasons which induced the Commissioners to call for a re-consideration of the whole subject, and on a report of the previous practice, to resolve that their notices should be sent abroad. They now understand that it is my Lords' desire that they are to revert to the limited circulation, and to restrict their notices to Nos. 4 and 6 of the preceding list, but, before doing so, I have been directed to submit to my Lords the considerations on which the Commissioners proceeded in extending their distribution.

and to state that they are so satisfied of the advantage arising from the present arrangement that they trust my Lords will not allow the very small outlay to weigh with them in discontinuing that arrangement which has proved so advantageous to the mariner from foreign parts.

I am, &c.,
(Signed) ALEX. CUNINGHAM, Secy.
(Addressed) The Secretary Marine Department,
Board of Trade.

3.—Reply from Board of Trade.
London, 4th June 1858.

Sir,—With reference to former correspondence on the subject of the expense incurred by the Commissioners of Northern Lighthouses for advertising and circulating notices by post relating to new lights, I am directed by the Lords of the Committee of Privy Council for Trade to transmit to you the accompanying copy of a letter from the Elder Brethren of the Trinity House, containing a statement of the practice pursued by that Corporation with respect to publishing notifications of English lights at home and abroad, and showing the expense incurred for each notice.

My Lords suggest for the consideration of the Commissioners that the practice of the Elder Brethren answers the purpose of giving ample publicity to these notices, and that it will therefore be desirable that a similar course should be adopted by all the lighthouse Boards.

The Commissioners will observe that, according to this practice, foreign consuls obtain the requisite notices, and that it is the duty and practice of these officers to send them home to their own countries, just as British consuls send home notices of foreign lights.

I am, &c.,
(Signed) T. H. FARRER.
(Addressed) A. Cuningham, Esq.
(Enclosure referred to.)

Trinity House, London,
29th May 1858.

Sir,—Having brought under the consideration of the Elder Brethren your letter of the 20th instant, relative to the expense incurred by the Commissioners of Northern Lighthouses for advertising and circulating notices by post, relating to new lights, comparing the same with similar items of expenditure in the accounts of this corporation, and stating that the Lords of the Committee of Privy Council for Trade are of opinion that the practice should be uniform, and request to be favored with the Elder Brethren's opinion thereon, and especially whether the course pursued by them answers the purpose of giving ample publicity in the United Kingdom and foreign parts, I am directed to transmit to you for their Lordships' information the accompanying statement and distribution of the notices issued in December last relative to the intended exhibition of the Bishop Rock Light, and the expense incurred in that instance, and to state that the Elder Brethren concur with their Lordships in opinion that the practice in this respect should be uniform as far as may be practicable, and that they have every reason to believe that ample publicity is given in the United Kingdom and in foreign parts by the system of distribution which has for many years been in use by this Board, aided by the re-issue of the notices by the hydrographer of the Admiralty.

Their Lordships will observe that the expense as shown in your statement is considerably in excess of the sum named in your letter, and that then there was a subsequent general issue of the notice on the 29th ult., in consequence of the mistake made by the master of the American ship "Roscius," the expense of which will be nearly the same as above, and although printed notices of the Bishop Rock Light will not be again distributed, the advertisement will have to be re-published occasionally in the newspapers.

I am, &c.,
(Signed) P. H. BERTHON.
(Addressed) The Secretary Marine Department,
Board of Trade.

STATEMENT of the Expense of Printing and Advertising a Notice to Mariners of the Light to be exhibited from the Bishop Rock Lighthouse; and of forwarding Copies to the various Ports, &c. (as shown in the List appended hereto) for distribution:—

	£ s. d.
Cost of printing 2,500 copies of the notice	2 14 0
Cost of advertising same in London papers, as per list	3 18 6
Postage (by book post) of copies for distribution at the outports, as per accompanying list	1 6 0
	£7 18 6

Bishop Rock Lighthouse.—Notice dated 15th December, 1857; sent out 17th December, 1857.

4.—Answer by Secretary.

Northern Lighthouse Office, Edinburgh,
10th June 1858.

Sir,—I have to acknowledge receipt of your letter of 4th current, transmitting copy letter from the Trinity House as to the extent of circulation given to notices of new light-houses. Having laid the same before the Commissioners of Northern Lighthouses, I am directed to state that, in obedience to my Lords' directions, the Commissioners will for the future limit the number of notices to be issued in conformity with the rule adopted by the Trinity House.

The Commissioners are now issuing intimations of the lighting of Kanticthead in Orkney, and they direct me to inquire whether this and future intimations of light-houses, &c. in Scotland are to be withheld from all Scotch and local newspapers, and merely to appear in the London newspapers specified in the Trinity House letter.

I am, &c.

(Signed) ALEX. CUNNINGHAM,
Secretary.(Addressed) The Secretary, Marine
Department, Board of Trade.

5.—Reply by Board of Trade.

London, 18th June 1858.

Sir,—I am directed by the Lords of the Committee of Privy Council for Trade to acknowledge receipt of your letter of the 10th instant, asking, with reference to former correspondence, whether, in future, intimations of new lights and light-houses in Scotland are to be withheld from all Scotch and local newspapers, and are merely to appear in the London newspapers.

In reply, I am to acquaint you, for the information of the Commissioners of Northern Lighthouses, that should the Commissioners think it necessary, my Lords see no objection to the insertion of the advertisements relating to Scotch lights in the Edinburgh and Glasgow newspapers in addition to the advertisement in those papers which are mentioned in the Trinity House List.

My Lords do not wish to bind the Commissioners to select the same newspapers as the Trinity House, but only that they should follow the same general system.

I am, &c.

(Signed) T. H. FARRER,

(Addressed) The Secretary, Commissioners
of Northern Lighthouses.

6.—Letter from Board of Trade.

London, 9th March 1859.

Sir,—With reference to the reply on Query No. 38, relating to the charge of 12*l.* 5*s.* 6*d.* for advertisements in the accounts of the Commissioners of Northern Lighthouses for the quarter ending 30th September 1858, I am directed by the Lords of the Committee of Privy Council for Trade to inform you that my Lords, having caused inquiries to be made respecting the practice of the Trinity House in such matters, have received a letter from their accountant on the subject, a copy of which is enclosed; my Lords direct me to request that you will again bring the subject under the consideration of the Commissioners with the view to making the practice of advertising correspond with that adopted by the Trinity House, so far as the different services will permit.

It is to be remembered that notices of all new lights are circulated by the Admiralty to the different custom houses.

I am, &c.

(Signed) JAMES BOOTH.

(Addressed) The Secretary Commissioners
of Northern Lighthouses.

(Enclosure referred to.)

Trinity House, London.

23d February 1859.

My dear Sir,—In reply to your inquiry of the 17th instant as to advertisements published by the Commissioners of Northern Lighthouses, it is quite evident from the copy of account you enclosed that their advertisements in the newspapers are much more numerous than those of the Trinity House. Their plan appears to be regulated by the locality in which the information is most important, while our practice is uniform in advertising all notices, except those relating to wreck buoys, in eight newspapers, all published in London, and we very seldom send an advertisement to a local newspaper. To give one comparison, the expense of advertising a change of system in buoyage of the Firth of Forth, by the account you send is 32*l.* 2*s.* 11*d.*, being 649 single insertions in different papers. A notice of extra five changes in one of the entrances to the Thames will cost about 4*l.* or 5*l.* for insertion in eight newspapers. Taking the amount of our advertising bill from October 1857 to September 1858 (copy of which I enclose) the total 211*l.* 17*s.* 6*d.* divided by the number of notices, &c. 2 gives 4*l.* 4*s.* 9*d.* as an average, per notice, even though some subjects of unusual importance are advertised two or three times. A general coast light notice would, perhaps, 1 published three times, and the cost of the three insertions in all the papers be about 12*l.*

We consider the Shipping Gazette and Lloyd's List to be the best papers for informing the outports, as there scarcely a port or creek in England where they are not read but they may not be so universally received in Scotland. The Times, Public Ledger, Daily News, Morning Herald, United Service Gazette, and Mitchell's Maritime Register make up the number with those above named.

I am, &c.

(Signed) JOHN INGL

(Addressed) H. R. Williams, Esq.

BUOYS AND BEACONS.

XXI. to XXVI.

SCOTLAND.
Circular V.

7.—Reply by Secretary to the Board of Trade.

Northern Lighthouse Office, Edinburgh,
24th March 1859.

Sir,—I have to acknowledge receipt of your letter of 9th current on the subject of advertising, and enclosing the letter of the accountant of the Trinity House to the accountant of the Board of Trade on the subject.

The letter of the accountant of the Trinity House excludes from view the printed notices which are issued by the Elder Brethren.

The Commissioners do not, in the cases referred to, issue any notices beyond advertising, and they cannot help, notwithstanding the opinion of the accountant to the Elder Brethren, observing that the true principle of giving intimation seems to be that of publishing in a generally circulating medium and in the local papers.

It would be much better for the Commissioners to desist advertising or issuing any notices than to insert them in the papers mentioned in the letter of the accountant of the Trinity House. Not one of these papers is ever seen in the remote parts of Scotland. The Commissioners have, however, no desire to press their opinion, if my Lords think the accountant of the Trinity House to be a superior authority as to the best means of intimating changes in Scotland. The Commissioners will, in deference to my Lords' directions, refrain from advertising in anything but the papers mentioned, although, at the same time, they will protest against it on account of its intility.

I am, &c.
(Signed) ALEX. CUNINGHAM,
Secretary.

(Addressed) The Secretary, Marine
Department, Board of Trade.

8.—Answer by Board of Trade.

London, 4th April 1859.

Sir,—I am directed by the Lords of the Committee of Privy Council for Trade to acknowledge receipt of your letter of the 24th ultimo on the subject of the advertisements issued by the Commissioners of Northern Lighthouses.

As regards the advertisements of the lights, buoys, and beacons, my Lords desire me to refer the Commissioners to the correspondence which took place on this subject in June 1858. To the opinion then expressed my Lords adhere, and they still think that it is quite needless to advertise in many of the papers mentioned in the Commissioners' list. If there are places on the sea coast in Scotland frequented by persons who are likely to pass new lights, buoys, or beacons where the papers of more general circulation are not to be found, and where printed notices circulated by the hydrographer are not posted, my Lords would suggest that the issue of printed notices by the Commissioners to

be posted at those places would better meet the wants of the case than advertisements in newspapers, many of which never meet the eyes of seafaring persons.

As regards notices for tenders, my Lords wish to leave it to the Commissioners to advertise in such papers as are likely to meet the eyes of those for whom the notices are intended.

The letter from the accountant to the Trinity House, I am to add, was forwarded in my letter of the 9th instant simply for the purpose of explaining the practice of the Trinity House, the principle of which practice, as my Lords have stated before, should, in their opinion, be adopted throughout the United Kingdom.

I am, &c.
(Signed) T. H. FARRER.
(Addressed) The Secretary, Commissioners
of Northern Lighthouses.

XXII. No. BUOY MASTER GOES DOWN.

XXIII. A LETTER FROM A NEIGHBOURING LIGHT-KEEPER OR SOME ONE ON THE SPOT IS RECEIVED.

XXIV. NIL, EXCEPT THE CHANGE REFERRED TO IN THE REPORT.

XXV. NONE, EXCEPT AS EXPLAINED IN THE REPORT.

XXVI. STATEMENT OF THE DUTIES OF THE BUOY MASTER.

As the name indicates, the primary duty of this officer is to superintend this department of the service. He has to see to the efficiency of the buoys, their moorings and mooring chains, keeping up a requisite stock of spare ones for the renewal of those damaged, to replace those driving from their moorings; annually to renew the painting of them, and to shift the newly painted for those which have been exposed during the preceding year. To paint, when required, the beacons, and see to their being constantly kept in a proper state of repair.

To assist him in his duties there are depôts at Granton, Cromarty, Oban, Corran, and Campbeltown.

In these depôts the spare buoys and moorings for the respective districts are stored.

The Buoy Master keeps books showing the application of all the buoys, the repairs ordered and executed, and the disbursements which he has to make.

Independent of these duties the Buoy Master is called to report occasionally on applications for new buoys, to superintend their being placed, and to take the necessary bearings of their position.

He has also to assist annually in making up the estimate for the succeeding year's supply, to be submitted to the Board of Trade.

By order of the Board,
ALEXANDER CUNINGHAM
Edinburgh, 22d September 1859. Secretary.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

Applicable to coasts under the superintendence of the Commissioners of Northern Lighthouses.
Numbered on the same system as the Index Map Geographically from west, north, east—sunwise.

33.

I. William Marshall, Merchant and ship-owner, Garliestown, in the port of Wigtown.

II. WIGTOWN BAY.

III. There is no lights or buoys in Wigtown bay, there is none required so far as I know of.

IV. There is a light on the Little Ross near Kirkcudbright, which is of great service to vessels frequenting Wigtown bay.

V. I am not aware of any improvement required.

VI. The only place where a light might be erected would be the Burgh Head, a headland the entrance to Wigtown bay from Luce bay, but it is not much wanted.

II.

VIII. No.

X. None.

XI. A flag is hoisted at Garliestown pierhead when there is water in the harbour, if any vessels are in the offing.

XII. None.

XIII. None.

XIV. No.

XV. None.

XVI. None.

XVII. No reply to this.

XVIII. None.

Circular VI.

- 34.
- I. Capt. John McNeill, retired from sea.
 - II. ISLE of ARRAN, LAMLASH.
 - III. Northern Light Company.
 - IV. I consider they are good.
 - V. Pladda has two lights.
 - VI. No place.
 - VII. Oil.
 - VIII. None.
 - IX. None.
 - X. None.
 - XI. None wanted.
 - XII. None used, and not any wanted.
 - XIII. A red can buoy in the south entrance of Lamlash Harbour.
 - XIV. No.
 - XV. None paid.
 - XVI. I do not know of any.
 - XVII. I hear no complaints.
 - XVIII. No dues.
 - XIX. I know not.
 - XX. None.

35.

- I. William Watson, Jun. and Co., Agents for Lloyd's, Campbeltown, Argyleshire.
- II. CAMPBELTOWN, and ADJACENT COASTS.
- III. Northern Light Commissioners.
- IV. With few exceptions they are ; refer to No. VI.
- V. Present lights and beacons are efficient and well placed.
- VI. Would recommend a light to be placed on Quarry Point, to lead into harbour. Devaar light guides to the Loch, but after that is passed all is dark, and the channel narrow. This building could be erected at small cost, and lighted by town lamp-lighter, gas-pipes being already laid to within a few yards of proposed sight. Would recommend a beacon on reef at north-east point of Devaar island, and one on Smerby rocks, north side of entrance to harbour.
- VII. All lights on this coast are lighted with oil ; pier lamp with gas.
- VIII. The old harbour light was removed on Devaar light being built. Not aware of any accident having occurred in consequence.
- IX. The buoy at "Oterard" has been removed ; we understand on remonstrance from fishermen losing nets against it. We have known the buoy on Arranman's—barrels being shifted by gales of wind, but immediately reported by our local agent, and by us to Northern Light Commissioners, who lost no time in replacing, no accidents having occurred.
- X. Several accidents have occurred, generally from fog, but these we cannot fairly attribute to want of lights, buoys, or beacons.
- XI. The harbour is accessible at all times of tide, and no signals required.
- XII. No fog signals are used. We cannot suggest any apparently useful system.
- XIII. Buoys and beacons are coloured red or black ; of conical form and being entirely under control of buoy-master appointed by Northern Light Commissioners : we conclude are arranged on one system all round the coasts of Scotland.
- XIV. Buoys and beacons in this locality we consider to be well arranged.
- XV. No local dues are levied in such respect.
- XVI. No complaints so far as we are aware, unless our intimation of removal of a buoy by gale may be construed as such.
- XVII. Satisfactory, excepting remarks No. VI.
- XVIII. No complaints against light dues, except improper levy, for instance,—Sailing vessels and steamers trading betwixt Ayr and Campbeltown are charged for Sanda light which they cannot by any possibility see.
- XIX. No local dues except "quay dues" levied here, which have not been entirely applied to the purposes for which nominally levied.
- XX. General opinion in locality as to present management of lights, &c., is favourable.

36.

- I. John McIsaac, Harbour Master.
- II. CAMPBELTOWN, ARGYLESHIRE.
- III. Northern Light Commissioners.
- IV. There is little to improve, except a beacon was placed on Smerby rocks.
- V. If a beacon were placed on Smerby rocks it would be of great benefit to the port of Campbeltown.
- VI. An iron beacon of bar iron might with ease and utility be placed on Smerby rocks, as the rocks are dry at low water, and would be a guide for Otterard rock, which has only ten feet on it at low water, and is about three cables length south-east from Smerby rocks.
- VII. The island Davar light is from oil, the quay light from gas.
- VIII. The lighthouse that formerly led into the harbour was fixed at Kilkerran, but on the erection of the light on the island Devaar, was discontinued by order of the Commissioners of Northern Lights. It was found to be much wanted by vessels entering the harbour after dark, but no accident has occurred through the omission, only if restored and placed about 300 yards to the north-west would be of service as leading through the narrow channel.
- IX. The buoy on Otterard rock has been frequently carried away by gales, and for some years past discontinued, which shows the necessity of a beacon on Smerby rocks, for almost every winter some small craft is found on shore, although few are totally lost.
- X. Cannot state any accident that may be fairly attributed to want of buoys or beacons.
- XI. No tide signals needed, being a deep water harbour.
- XII. No fog signal used at the lighthouse.
- XIII. The buoys and beacons on the starboard hand are red, and on the port hand black in entering. The beacons are of sheet iron, in form of a cone, with ball on top ; the buoys are conical.
- XIV. Would not recommend any change.
- XV. The dues payable for Devaar Light is 6*d.* for 50 tons register, and an additional 6*d.* for every 50 tons. Wind-bound vessels pay neither lights nor dues.
- XVI. Not aware of complaint against light, buoy, or beacon in this locality.
- XVII. Mariners are satisfied generally with the lights, buoys, and beacons, except for Otterard or Smerby rock, which should be beaconed.
- XVIII. There is no complaint I hear of amongst mariners, the dues being much the same as other places on the coast.
- XIX. Cannot answer this question.—The general opinion satisfactory with regard to management of lights, buoys, and beacons.

37.

- I. John MacMillan, Bowmore, pilot in Lochindaal for the last 40 years, Dan McIntosh, Bowmore, pilot in Lochindaal upwards of 30 years.
- II. LOCHINDAAL, ISLAND of ISLAY.
- IV. Lochindaal is not lighted at all, though very much required, owing to a large number of vessels putting in for shelter ; in attempting to do so, many are lost from the want of a proper light and buoys.
- V. Would suggest that a large buoy should be placed on each side of the bar or entrance to the harbour, in order to be discovered, and to guide vessels to the proper anchorage.
- VI. We would recommend that a lighthouse should be erected at the north side of the entrance to Lochindaal, and east of the village of Port Charlotte, as that would enable the mariner entering Lochindaal, to get hold of the harbour light on losing the Rhuns Light, and enable him to come to a safe anchorage.
- IX. There are no buoys in Lochindaal.
- X. A large number of vessels have from time to time gone ashore on Laggen Bay, when making for Lochindaal, not being able to distinguish the one from the other at night, from the want of a harbour light.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

- XIII. None.
 XV. None.
 -XVIII. We have often heard ship-masters complaining of the want of a harbour light, buoys, &c., in Loch-indaul, and stating that they would cheerfully pay harbour dues, were there a light to guide them to the anchorage.

- XV. There are no local dues.
 XVI. I am not aware whether any complaints have been made.
 XVII. The general feeling of the mariners is that the lights and buoys are efficient so far as they exist.
 XVIII. There are no local dues.
 XIX. None.
 XX. They are supposed to be well managed.

SCOTLAND.
 Circular VI.

38.

- I. A. MacKinnon, agent for Lloyd's, Corry by Broadford.
 II. From ARDNAMURCHAN to GAIRLOCH, including the ISLANDS of RUM, CANNA, MUCK, and EIG.
 III. The Commissioners of Northern Lighthouses.
 IV. Yes, with the exceptions under noted.
 V. I have been told by mariners that it is difficult to make out Isleornsay Harbour in a dark night, for want of a distinguishing light to show when they are clear of the north-east point of the island.
 VI. A buoy, I think, is wanted, or rather a beacon, on a rock called Skertarsin, at the north-east entrance to the sound of Rasay. A buoy on Boderg at the entrance of Loch Torridon; a large beacon on Linga Vor, at the entrance of Lochnagall Arisaig; a buoy on the reef at the north-east of Sand Island, at the entrance of Canna Harbour, and one on Skeirintrá, in the entrance to Lochnevis. My reasons are, that I have known accidents occur on all of these.

- VII. Oil.
 VIII. Not that I know of.
 IX. I have not.
 X. I have known accidents occur on all the rocks I have mentioned. Last year I had the wreck of the schooner Eulala on Skertarsin; and a few months ago that of a sloop, called the "Jessie," on the rock called Linga Vor.
 XI. None are used, nor do I consider them necessary.
 XII. None are used, and I hardly think they would be of any use.
 XIII. They are all coloured black on the port side and red upon the starboard side.
 XIV. No.
 XV. There are no local dues.
 XVI. I have never heard of any.
 XVII. The general feeling, I believe, is that the existing lights, buoys, and beacons are efficient.
 XVIII. There are no local dues.
 XIX. Answer to No. XVI. referred to.
 XX. They are considered to be well managed.

39.

- I. James Manson, Kyleakin, pilot in the Naval Surveying Service.
 II. From ARDNAMURCHAN to GAR LOCH, including the ISLANDS EIG, RUM, MUCK, and CANNA.
 III. Northern Lighthouse Commissioners.
 IV. Yes, with the exception after mentioned.
 V. I consider it requisite that a distinguishing light should be shown at the lighthouse at Isleornsay to show a person entering the harbour when he is clear of the north-east rock.
 VI. I would recommend a beacon on Sgeirtarsuinn at the north-east entrance of the Sound of Raasay; another large beacon upon Linga Mhor, at the entrance of Lochna Gaul Arisaig; a buoy on Boderg at the entrance of Loch Torridon, and one on the reef at the north-east of Sand Island, at the entrance of Canna Harbour, and one on Sgeir an T'sruth in the entrance to Lochnevis.
 VII. Oil in all.
 VIII. I am not aware of any.
 IX. I am not aware.
 X. I have known vessels go on shore on all the rocks on which I have recommended beacons or buoys to be placed.
 XI. None are used, and I do not think they are wanted because they are mentioned in all the charts lately published.
 XII. None are used, and I do not consider them necessary.
 XIII. Black on the port hand and red upon the starboard, according to the Admiralty directions.
 XIV. None.

40.

- I. Niel M'Donald, Tacksman, Kilbride, South Uist.
 II. CASTLE BAY, in BARRA.
 III. Commissioners of the Northern Lights.
 IV. Not well lighted or buoyed.
 V. No buoys or beacons in this locality.
 VI. Castle Bay, Barra, being the only harbour in Barra frequented by large vessels, I would recommend a beacon painted white on a rock in the entrance, and two buoys, one red and the other white, on other two sunk rocks in the harbour.
 VII. Colza oil.
 VIII. I am not aware.
 IX. I do not know.
 X. I am not aware of any.
 XI. No tide signals used.
 XII. No fog signals used.
 XIII. No buoys or beacons in this locality.
 XV. I am not aware to whom they are paid.
 XVI. I am not aware of any.
 XVII. A number of ship masters told me that the Ruhusinnish light was good for nothing; I never heard a complaint of the Barra Head light.
 XVIII. I am not aware of their feelings.
 XIX. I am not aware.
 XX. I am not aware.

41.

- I. Niel M'Donald, tacksman, Kilbride, South Uist.
 II. LOCHBOISDEL, in SOUTH UIST.
 III. Commissioners of the Northern Lights.
 IV. Not well lighted nor yet buoyed.
 V. Lochboisdell is a very fine harbour, and is very much frequented in winter by large vessels from the Baltic, and bound to different ports in England and Ireland. There are four dangerous half-tide rocks in the harbour of Lochboisdell, which should have been buoyed long ago with black and white buoys.
 VI. I would recommend a revolving bright light on the Island of Ornsay in South Uist, or on the Island of Firay, in Barra, to lead vessels in distress through the sound between Uist and Barra, from the westward; in the entrance of the sound from the eastward there is a large and capacious harbour called Otter Vore. If the sound was well buoyed, white and red, after a careful survey I am certain it would save an immense deal of life and property. In the year 1853 a large ship, called the "Annie Jean," with upwards of 500 passengers on board, was wrecked on Barra Island, and about the half of that number drowned, within three miles of the entrance of the Sound of Barra. In the year 1856 a large ship belonging to Hartlepool, called the "Hecla," Captain Moore, came through the sound with a ship of 900 tons register, at three-quarters flood, and only touched once; for I have been an eye-witness; large vessels that get too close to the shores of this island in bad weather and westerly winds it is almost impossible for them to work off or round Barra Head. For further explanation see W. Norris's Chart of the West Highlands.
 VII. Colza oil.
 VIII. I am not aware of any.
 IX. There were never any buoys laid down in this place that I am aware of.
 X. The schooner "Eward," of Leer, was wrecked here on the 24th November, 1859, and told me that he did not see a red light on Ruhusinnish, though he passed within a few miles of it; consequently his vessel was wrecked at five o'clock next morning, with a valuable cargo of linseed from Riga.

SCOTLAND.
Circular VI.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

- XI. No tide signals used nor yet required.
XII. None used or yet required.
XIII. No buoys or beacons in this locality, though very much required.
XV. I am not aware.
XVI. I am not aware of any complaints.
XVII. A number of shipmasters told me that the Rubinnish Light was good for nothing, Captain Ellison of the brig "Cambyes," of South Shields, wrecked at Barra last year, told me that he was knocking about within a few miles of the light, and could not pick it up, and also Captain Kotting, of the schooner "Edwin," of Lea, told me the same.
XVIII. I am not aware of their feelings regarding the dues.
XIX. I do not know.
XX. I am not aware.

42.

- I. Alexander Macdonald, Ballranauld, North Uist, by Lochmaddy, agent to Lloyds.
II. LOCHMADDY ISLAND OF NORTH UIST, INVERNESS-SHIRE, N.B.
III. There is none at present.
IV. There are neither buoys nor beacons at Lochmaddy, and no lighthouse nearer than Glass light, on the south coast of Harris, 22 miles east-north-east, and Rhu-Ushinish light on the south-east coast of South Uist, about 20 miles south-west by south by compass from the entrance of this harbour.
V. In absence of a harbour light, a beacon of masonry, and one buoy, would be very serviceable.
VI. I would recommend a harbour light to be erected on the south point of the entrance, and a buoy on the edge of the shoal lying off the north-east side of the Reele group of islands, for the following reasons, viz., there is such a sameness in the coasts on both sides of the entrance, that it is difficult to make it out in a dark night or in thick weather; that it has been the mail packet station for upwards of 50 years, and is now a good deal frequented by steamers and other trading vessels, which must lie to off the entrance in dark nights for daylight; besides, it is a harbour where any sized vessel can find shelter in.
VII. No lights nearer than those mentioned in No. IV.
VIII. I know of none.
IX. I do not know of any.
X. I know of several shipwrecks and loss of life on the north-west coast of North Uist, entirely owing to the want of a lighthouse on that part of the coast.
XI. None required here.
XII. If there was a lighthouse, a fog signal would be of service, but otherwise it could not be attended to.
XIII. There are none.
XIV. No buoys.
XV. No local dues.
XVI. I do not know of any.
XVII. It has been the opinion of many shipmasters, frequenting the port, that a harbour light was very much required.
XVIII. No local dues paid here.
XIX. No local dues collected.
XX. I heard no complaints against the management of any of the lighthouses I have already mentioned.

43

- I. W. and R. Morison, merchants, and agents to Lloyd's, Stornoway.
II. STORNOWAY.
III. The only light is on Arinish Point, where there is also a beacon, both erected by the Commissioners for Northern Lights, and under their control.
IV. No.
V. The light on Arinish Point is so low, that in hazy weather it cannot be seen above three miles seaward, and then only a mere flash, the space for exhibition being too contracted, and the revolution too quick; this being a fine harbour, and much frequented, the light should be more elevated and improved.

- VI. There should be beacons on a rock in Sandwick Bay, and on a reef inside of Arinish Point; also on a ledge outside of Holm Point, being all half-tide rocks, and in the tract of ships entering and leaving the harbour with adverse winds. (See Captain Otter's charts.) There is also a buoy or beacon required on Skrivon, a rock near the centre of Broadbay, where several vessels have been wrecked.
VII. Colza oil.
VIII. We are not aware.
IX. The buoy on Skerinoe, off Glass, L. H., was twice washed away, but replaced as soon as possible, and in the interim a schooner (the Lawrence O'Connor Doyle) was totally wrecked on it.
X. Several vessels have struck, of late years, on the rocks described in question 6; one so late as the 5th November 1859; the "Frederick Wilhelmine," of Danzig, struck on the reef inside Arinish Point.
XI. No tide signals required, as there is sufficient depth of water at all stages of the tide.
XII. We are not subject to fogs.
XIII. There is only one iron beacon off Arinish Light, black, with white top, of a conical form, on which a light reflects at night, from the east base of the tower.
XIV. No.
XV. No local dues, except the usual charge for Arinish, as one of the Northern Lights, and a small tonnage rate on vessels using the quays.
XVI. We have heard no complaints.
XVII. Mariners complain of the Arinish Light being too low, and the want of beacons as specified in question VI.
XVIII. We have heard no complaints.
XIX. The small amount collected for quayage is expended for keeping the quays in repair.—11th Jan., 1860.

44.

- I. Dugald Graham, master, Clansman Steamer, of Glasgow.
II. STORNOWAY HARBOUR, ISLAND OF LEWIS.
III. The Northern Lighthouse Commissioners.
IV. No, not sufficiently.
V. Two beacons are required for the harbour, one upon the reef in Sandwick Bay, and one upon the Packet Rocks. The lighthouse upon Arinish Point is not of sufficient elevation; the light is not half powerful enough and the flash is too short; I often was within two and a half to three miles of it before I could pick it up.
VI. I have already referred to the harbour of Stornoway in No. V. The Raven Rock entrance of the Glen d'hu, Sutherlandshire, the Sgeir Tarsuain, off Scalpa Island, near Portree, and the entrance of Loch Carron, require beacons; a considerable traffic is in each locality at the fishing season; besides the regular trading of the steamers upon the coast, these are the most important. Several other localities are also needful of buoys and beacons, but not so much as those stated.
VII. Whale oil.
VIII. No, not aware.
IX. Most of the buoys get adrift from time to time in winter season; I do not, however, know of any accident in consequence.
X. A schooner was lost upon Sgeir Tarsuain, above referred to, a year ago, besides many narrow escapes from them all.
XI. None used, and not wanted.
XII. Not used, nor required.
XIII. There are none used.
XVI. Several representations have been made to the Northern Light Commissioners about the lighthouse on Arinish Point, and the beacons referred to have also been recommended; no result.
XVII. Very dissatisfied with the efficiency of the light, and the want of the beacons referred to in particular.

45.

- I. Magnus Lyon, Strommess, master of "Royal Mail" Steam Post Office Packet to Thurso.
II. HOY, WALLS, and PENTLAND FIRTH, West.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

SCOTLAND.
Circular VI.

- III. Northern Lighthouse Commissioners.
- IV. No.
- V. Nil.
- VI. Little Holhorn Head, Caithness Lights, bearing north-east and south-west, and a red light on Rora Head, Ruckwick, Hoy, Orkney.
- VII. Vegetable oil.
- VIII. No.
- IX. No.
- X. The Glasgow packet of Wick, I. Leith, master, grounded on the lower western point of the outer Holm of Stromness, on the 12th December current.
- XI. Nil.
- XII. A gong on the west lighthouse, Hoy Sound, would be useful in dark and foggy weather.
- XIII. Black on the port, and red on the starboard sides; form, nun and flat buoys.
- XIV. Black is preferred, being best seen.
- XV. None.
- XVI. None worth notice.
- XVII. Good.
- XVIII. None.
- XIX. None.
- XX. Nothing particular.—16th January, 1860.

46.

- I. Jno. Robertson, Stromness, agent to Lloyd's, &c.
- II. The WEST and SOUTH COAST and MAINLAND of ORKNEY, with the ISLAND ADJACENT THERETO.
- III. Commissioners of Northern Lights.
- IV. No.
- V. Nil.
- VI. A small iron beacon on the west point of the outer holm of Cairston; buoy on the outer point of the bank, sheltering Cairston Roads; a buoy on the rock on the west side of Scapa Bay; buoy on Lippa Rock, Watersound; and buoy and beacon on St. Margaret's Hope, St. Roland's Bay, see Mr. Lycris's report.
- VII. Oil.
- VIII. Not that I am aware of.
- IX. Lippa Rock Buoy was taken away some years ago, and various accidents have occurred in Watersound and St. Margaret's Hope.
- X. The Ina, Arthur, of Sunderland, from Quebec, struck on the bank east of Cairston Roads on the 16th December 1858, and filled with water. Various ships have grounded on the same shoal, and within the harbour for want of a beacon on the holm.
- XI. No tide signals, but much needed on Grinner's Head, Southern Wray, particularly fog signals, during the herring fishing season.
- XII. None.
- XIII. The beacon on Neva Holm is red, as also the one in Skerry Sound; the buoys are red port side, and black starboard side; chequered buoy on the Grinds, when the passage is any side.
- XIV. No.
- XV. None.
- XVI. When made they have generally been answered favourably.
- XVII. Pretty good feeling of late years.
- XVIII. Not to my knowledge.
- XIX. None collected.
- XX. Nothing particularly; generally satisfactory.—17th January 1860.

47.

- I. Wm. Cromarty, J. P., Merchant, St. Margaret's Hope, Orkney.
- II. More particularly ST. MARGARET'S HOPE and WATER SOUND.
- IV. No.
- V. A metallic beacon, instead of an old stick placed on a reef at the entrance to St. Margaret's Hope, and a buoy on a sunken rock called Scovil Flæes, on the opposite side of the entrance.

- VI. A buoy on the rock called Lippa, lying in the entrance to Water Sound; this buoy would require to be of considerable size, as the tide runs strong in this sound, and I think the colour should be black.
- XV. No dues levied here.
- XVII. What I have described in the foregoing is generally thought by the seafaring class frequenting this port as a desideratum.

48.

- I. S. P. Lanth, deputy agent for Lloyd's, St. Margaret's Hope, Orkney.
- II. ST. MARGARET'S HOPE, WATER SOUND, WIDEWALL BAY, PAN HOPE, and HOLM SOUND.
- III. Commissioners of Lights.
- IV. No.
- V. None.
- VI. A buoy on Lippa Rock, in Water Sound; a buoy on the shoal lying in the bay of St. Margaret's Hope, called Scovil Flæes; a metallic beacon on the reef shoal lying on the west side of St. Margaret's Hope entrance, and a light on Grimness Head. Vessels frequently go on the above shoals, and the want of a light is much felt for vessels taking Holm and Water sound, as also for herring boats during the fishing season.
- VII. Oil.
- VIII. None.
- IX. Lippa Rock buoy was removed; said to have run down by the tide (which was not the fact). A petition was sent to the Commissioners of Northern Lights, on 30th May, 1855, for the replacement of the Lippa Rock Buoy, as also for a light on Grimness Head.
- X. A number of vessels have run on Lippa Rock for want of the buoy; vessels taking the harbour of St. Margaret's Hope go on the shoals there.
- XI. None.
- XII. No fog signals are here; a gun on Grimness Head to be used during the herring fishery season, say from 12th July to 20th September, to guide vessels and boats employed in said fishing would be a great boon to the fishermen of the Isles of Orkney, as fogs are prevalent during the above time, and boats frequently find themselves in Pentland Firth, when they often lose their drift of nets, for want of a signal to Watersound. Neva Skerry beacon is a metallic common black. Grinds buoy, chequered white and black; Holm Sound beacon, metallic, pillar red. "Cubsay buoy," Holm Sound, black.
- XIV. None.
- XV. No local dues.
- XVI. Vide No. IX.
- XVII. Inefficient.
- XVIII. None.
- XIX. Nil.
- XX. Generally satisfactory.

49.

- I. A. Sutherland, Lloyd's agent for Shetland.
- II. The SHETLAND ISLANDS.
- III. Commissioners of Northern Lights.
- IV. The east coast of Shetland is now well lighted, but on the whole west coast there are none, and to my certain knowledge ships and lines are lost for want of a light—say on the Vee Skerries. Many buoys are required on the east coast from Lerwick to Yell Sound on sunk rocks, say one on the Soldian rock two miles north-east from Brenna; one on the Unicorn at the entrance of Catfirth Voe; one in Yell Sound on a sunk rock called Yell's Baa, near by the Island of Urfacy; one in the north entrance to Lerwick near by Rovey Head; one on the Havre du Grind sunk rocks, three miles south-east from Foula. A vessel from Archangel was lost on this rock a few years since, and no doubt others are lost in

SHETLAND.
Circular VI.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

- it which are never heard of, as many anchors and chains have been seen on the Havre du Grind sunk rock, and also about the Vee Skerries; the latter are partly above the surface.
- VI. A buoy should be placed near the south entrance to Lerwick on a shoal called the Baa of Twagoes. A buoy should also be placed on a sunk rock about half a mile north from the Green Holm, three miles from the north entrance to Lerwick.
- VIII. I am not aware of any such occurrence.
- IX. There are only two buoys laid down on the whole coast of Shetland, and those are in the harbour of Lerwick, sometimes accidents did occur formerly, but none since these two were placed. These two buoys have been placed by the Commissioners of the Northern Lights.
- X. I may state without any doubt that many accidents have occurred principally on the west coast for want of a light. Two vessels were, not long since, lost with their crews, viz., the "True Blue" of Glasgow, and "Charles Jones" of London, both of which might have been saved had there been but one light to direct them.
- XI. I do not think tide signals are required on this coast.
- XII. There never were any fog signals used on any part of Shetland; perhaps at times they might be of use.
- XIII. Black, form round, one of which is placed on a rock, the outer on a shoal about a quarter of a mile distant from each other.
- XIV. I am not aware they require any alteration.
- XV. There are dues chargeable here for lights, paid to the collector of customs at the same rates as at any other part of the kingdom.
- XVI. I am not aware of any.
- XVII. The general feeling of mariners frequenting the port of Lerwick is very good, and since the erection of a light recently on the south end of Bressa, this harbour can now be approached by day or night free of danger.
- XVIII. There are no local dues.
- XIX. No local dues.
- XX. I am not aware of any in particular, as far as regards lights. My own opinion is, that it would be of the greatest importance to have a light on Fair Isle, situated 'twixt the Orkneys and Shetland about half way.
-
- I. Joseph Leask, merchant, Lerwick, Shetland.
- II. PORT of LERWICK, and the SHETLAND ISLANDS generally.
- III. Commissioners of Northern Lights.
- IV. Lerwick harbour and the east coast is now very well lighted, but there are several sunk rocks off the north entrance of Lerwick harbour requiring buoys. See No. VI.
- VI. A light is much required on the Vee Skerries, lying a few miles to the westward of Papa. There are no lights on the west coast. The Vee Skerries is a very dangerous reef of rocks. There are several sunk rocks off the north entrance to Lerwick harbour on which buoys should be placed, namely, the Soldian, Nimbans, off the east side of Rossary, and one on a sunk rock near Rovey Head, in the north entrance, also on the Unicorn rock off the entrance to Catfirth Voe. A buoy or beacon would be necessary on the Havre du Grind rocks, three miles south-east of Foulas. A beacon is also necessary on the Rumble Skerries in Yell Sound.
- VII. Oil.
- VIII. I am not aware of any such occurrence.
- IX. There are only two buoys laid down on the whole coast, and they are in Lerwick harbour; previous to their being laid down some accidents did occur. The buoys have not been displaced since they were laid down.
- X. A vessel from Archangel was wrecked on the Havre du Grand rocks a few years ago, which might not have taken place had there been a light on the Vee Skerries.
- XI. There are none, and none required.
- XII. There are none, and do not think they are required.

50.

- XIII. The colour of the buoys in Lerwick harbour are black; one is laid on a rock and the other on a shoal.
- XIV. No.
- XV. There are no local dues levied on shipping.
- XVI. I have not heard of any complaint.
- XVII. Since the light was placed recently on the south end of Brassay, the entrance to our harbour, the mariners are generally well satisfied with the lights on the south-east side of the islands.
- XVIII. There are no causes of complaint, there being no local dues charged.
- XIX. No local dues.
- XX. I have not heard of any complaint on the management of the coast lights by the Commissioners of Northern Lights.

51.

- I. James Hoseason, Merchant, Mosshank, Shetland.
- II. To the SHETLAND ISLANDS generally.
- III. Commissioners of Northern Lights, I believe.
- IV. No.
- V. It would be almost impossible to light and buoy every part of the Shetland islands, as they would require to render their navigation safe to strangers; for them most particularly required refer to No. VI.
- VI. I would recommend a light to be placed on the Vee Skerries, near Hillswick; there are at present a light on each end of the group, and one on the east side, but the west side is quite unlighted; a light on the Vee Skerries would in a great measure supply that desideratum. I would also recommend a beacon to be placed on each of the Rumble Skerries in Yell Sound. Yell Sound is the usual passage through the islands from the German ocean to the Atlantic and vice versa, and with easterly winds much used by the Greenland fleet on their outward passage, and the Rumble Skerries are two very dangerous half-tide rocks right in the middle of it.
- VII. I do not know.
- VIII. I am not aware of any such.
- IX. There are no buoys in Shetland except two in Lerwick harbour, and only recently laid down.
- XI. I understand that Greenland vessels have occasionally grounded on the Rumbles, but I am not sufficiently informed to give names or dates of the numerous wrecks on our islands. There is little doubt many are attributable to the want of lights, two of the three coast lights have only been recently lighted.
- XI. There are none, and none required.
- XII. There are none, and could be of no service.
- XIII. Refer to No. VIII.
- XIV. Refer to No. VIII. I am not aware that they require any alteration.
- XV. I do not know whether any for the lights recently erected; for buoys or beacons none.
- XVI. In an answer to former queries, and have already pointed out the desirability of a light on Vee Skerries, and beacons on the Rumble Skerries.
- XVII. I think it is what I have expressed in these answers.
- XVIII. Light dues have recently been exacted from our fishing vessels prosecuting the fishery on the coast and banks of Faro, and as the light under the charge of the Northern Light Commissioners can be of little or no service to them, dissatisfaction has been expressed. I am ignorant, however, whether these dues have been charged for the northern lights generally, or for the two lights recently erected on our coast, but all are equally useless to the fishing vessels at or near the coasts of Faro.
- XIX. Refer to XVIII.
- XX. I am not aware of any general opinion other than that our fishing vessels, which, generally without seeing or being near a British light, proceed direct to the Faro islands, and then prosecute the fishery for one or two months at once, and return without the aid of any benefit from said lights, should not be charged.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

52.

- I. William Watson, ship agent, Cromarty, agent for Lloyd's, Cromarty district.
- II. PORT of CROMARTY, MORAY FIRTH, CROMARTY and INVERNESS FIRTHS.
- III. Commissioners of Northern Lights; Alexander Cunningham, Esq., Secretary, residing in Edinburgh.
- IV. Most certainly, with the exception of a buoy wanted on the bank, described in answer to Query VI. on this paper.
- V. The lighthouse stands about 100 yards above high-water mark, in consequence of which, vessels are frequently aground, on a sand bank, about a quarter of a mile lower down, which a buoy placed on it would remedy.
- VI. On the sandbank referred to in answers to query Nos. IV, and V, on this paper, bearing E.N.E., about a quarter of a mile lower down the firth than lighthouse.
- VII. Colza oil used in lighthouse.
- VIII. Never; the lights being well attended to all along the coast.
- IX. The buoys are never displaced in this firth. The Commissioners of Northern Lights have them overhauled, painted and securely anchored anew every twelve months.
- X. None whatever in this locality.
- XI. No tide signals of any kind used in our harbour. A tide signal would be most advantageous at the harbour of Cromarty. A light by night, and a flag or black ball by day.
- XII. No fog signals used in this locality.
- XIII. The buoys are all red on starboard side going up the firth, and black on the port side, form of a sugar loaf, arranged as stated before.
- XIV. No; they suit very well as at present.
- XV. Yes; by officer of customs, and paid over to the Commissioners of Northern Lights.
- XVI. No complaints.
- XVII. Perfectly satisfied.
- XVIII. Quite satisfactory; I hear no complaints.
- XIX. Most certainly.
- XX. The general opinion is that the management is admirable, and can scarcely be improved upon.—22d December, 1859.

53.

- I. James Geddie, shipbuilder, Kingston, Speymouth.
- II. SPEYMOOUTH.
- III. None.
- IV. There are neither light, buoy, nor beacon within eight miles of this port.
- V. None.
- VI. Our pilots use tide signals occasionally, but they would not answer to be stationary, as the channel shifts so very often, owing to the strong current of the river and the great quantity of loose shingle at its mouth.
- XIII. Our pilots use small buoys, but have occasion to shift them very often, as occasion requires them by the shifting of the shingle.
- XV. None.
- XVI. None.
- XVII. Never heard any remarks made.
- XVIII. Never heard any complaints.
- XIX. As far as ever I heard.
- XX. Never heard any complaints.

54.

- I. John Stephen, seal and whale ship "Milenka," FRASERBURGH—shipmaster.
- IV. No.
- V. I consider that Rattray Head is the most dangerous headland on the whole east coast of Scotland, being very low, and the shore light sand, makes it scarcely perceptible at night, especially in moon-light nights; and also that it has very dangerous reefs laying seaward of it, one in particular to the south-east, which extends $1\frac{1}{2}$ miles from high-water mark, and I consider it necessary that a large nun buoy should be laid down in six fathoms at low water, on the outer end of this reef, and also that Kinnairds Head and Buchan Ness light should be so arranged as to make this head passed in greater safety, such as Buchan Ness light masked shore ward to the line of the

buoy on the said reef, and also Kinnaird's Head, and then it to show up a red light between the line of the buoy on Rattray Brig, and until Carinbulg Brigs were passed, and the light to appear in the same colour as it is at present. There is a large iron beacon on Carinbulg Brigs, lately put on, which is of very great service.

SCOTLAND.
Circular VI.

- VI. I may also state, that a buoy would be of very great service on the outer part of the reef of rocks which lies about one mile of Scoteston Head; it is also very dangerous, and wrecks often occur upon it.
- VII. The light on Kinnaird's Head is from oil. The leading lights at the harbour of Fraserburgh are from gas, but would recommend them to be much larger, as they are a safe guide to vessels passing Carinbulg Brigs.
- X. It is my opinion that much life and property have been lost on these headlands, which would in all likelihood have been saved had the lights, &c. been arranged as above.
- XI. There are no tide signals used at this port, and I consider there should be, and shown at two-thirds flood by ball or flag by day, and a green light by night.
- XII. There are no fog signals used here, but they would be of the greatest importance at this port, especially in the fishing season.
- XIII. There are no buoys about this port but one, and it is very often adrift and on shore, from which great inconvenience is found. For the safety of the navigation of this port, I consider it necessary that a nun buoy should be placed at the north side of the channel, on the outer side of the outer lush, and another on the south side of the channel, on the bush of the beach.
- XVII. The general feeling of seafaring people here is as stated at No. XIII.

55.

- I. John Park, shipowner, Fraserburgh.
- II. FRASERBURGH.
- IV. No.
- V. A large nun buoy should be placed on the outer end of the reef of rocks at Rattray Head.
- VI. Because the reef at Rattray Head extends $1\frac{1}{2}$ miles seaward, and is very dangerous.
- VII. The light on Kinnaird's Head is from oil; the harbour lights are from gas.
- X. There have been many wrecks on Rattray Head, no doubt several have taken place from want of a buoy and proper lights.
- XI. There are no tide signals at this port; a flag was hoisted for a short time at half flood, but it has been given up, which I consider very improper; a flag or ball ought to be hoisted at half flood.
- XII. None.
- XIII. Only one buoy, and it is sometimes adrift; two buoys should be laid down, one to the north, and the other at the south entrance of the channel.

56.

- I. I. J. and T. Kirkwood, merchants and agents for Lloyd's.
- II. DUNBAR and ADJACENT COAST.
- IV. We do not think this coast is sufficiently lighted.
- VI. Goatness Point, about three miles south-east from Dunbar, because a very large proportion of the wrecks which occur in our district, which extends from St. Abb's Head to Gullan Ness, happens in that neighbourhood. In our opinion this is caused by the chain of the Lammermoor Hills, which commences at St. Abb's Head, and recedes inland to a distance of several miles from this Point, being mistaken for the line of coast, the intervening country being flat, and the point itself very low, are not observable from sea at night.
- VII. Oil.
- VIII. We are not aware that such has ever happened.
- IX. There are no buoys on this coast.
- X. See our answer to No. VI.
- XI. There are none, and we do not think they are required here.
- XII. None, and not required.
- XIII. There are none.
- XV. None.
- XVII. Similar to our answer to No. VI.

SCOTLAND.

Circular VI.

EVIDENCE COLLECTED THROUGH LLOYD'S AGENTS.

57.

- I. John Spence, merchant, Dunnet, Thurso.
- II. PENTLAND FIRTH DISTRICT.
- III. Commissioners of Northern Lights.
- IV. I do consider them well lighted. There are no buoys, nor, as far as I am aware, occasion for any.
- V. I cannot suggest any improvement in these respects.
- VI. See V.
- VII. I am informed the combustible in use at Dunnet Head is Colza oil.
- VIII. I am not aware of any such occurrence.
- IX. No buoys. See IV.
- X. I am not aware of any such subsequently to the erection of a beacon on the Skerry of Stroma, which took place about two years ago.
- XI. There are no tide signals used, nor in the circumstances of the locality do any appear necessary.
- XII. There are no fog signals used, and, owing to the rapid tides, I do not see that they could be of great use.
- XIII. There is but one beacon—that on the Skerry of Stroma, which is of a pyramidal form painted red.
- XIV. I consider the form and colour good, and do not think any change would be of advantage.
- XV. There are no local dues.
- XVI. I am not aware of any.
- XVII. The general feeling appears to be that these arrangements are the best possible in the circumstances.
- XVIII. No local dues. See XV.
- XIX. See above.
- XX. The general opinion appears to be favourable.

57.

- I. James Calder, shipmaster, Ratter, Dunnet, Thurso.
- II. PENTLAND FIRTH DISTRICT.
- III. Commissioners of Northern Lights.
- IV. I do consider them well lighted. There are no buoys nor, as far as I am aware, occasion for any.
- V. I cannot suggest any improvement in these respects.
- VI. See V.
- VII. I am informed the combustible in use at Dunnet Head is Colza oil.
- VIII. I am not aware of any such occurrence.
- IX. No buoys. See IV.
- X. I am not aware of any such subsequently to the erection of a beacon on the Skerry of Stroma, which took place about two years ago.
- XI. There are no tide signals used, nor in the circumstances of the locality do any appear necessary.
- XII. There are no fog signals used, and owing to the rapid tides, I do not see that they could be of great use.
- XIII. There is but one beacon, that on the Skerry of Stroma, which is of a pyramidal form, painted red.
- XIV. I consider the form and colour good, and do not think any change would be of advantage.
- XV. There are no local dues.
- XVI. I am not aware of any.
- XVII. The general feeling appears to be that these arrangements are the best possible in the circumstances.
- XVIII. No local dues. See XV.
- XIX. See above.
- XX. The general opinion appears to be quite favourable.

The numbers in the margin correspond with the numbers of the Questions in Circular I.

IRELAND.

CIRCULAR I.—CONSTITUTION OF GENERAL AUTHORITIES, &C.,
INCLUDING
OFFICE STAFF, GENERAL BUSINESS, EXPENDITURE, &C.

BALLAST BOARD, DUBLIN.

I. NUMBER OF DAYS OF ATTENDANCE OF MEMBERS, AND THEIR DATES, IN 1857 AND 1858.

THOMAS CROSTHWAIT, Esq., J.P.,

President of the Chamber of Commerce, Director of the Bank of Ireland; appointed 1820=33 Years a Member.

		3		5

Upon the decease or resignation of a member, notice is published in the Gazette and other newspapers, that, upon a certain day therein named, the Board will proceed to elect a "fit and able person" to fill the vacancy. The Corporation is then specially summoned, and at their meeting the party is balloted for, and a return, under the corporate seal, of his election, forwarded to the Lord Lieutenant and Privy Council; and should no disapproval be given within 21 days after the return has been left at the Privy Council office, he then becomes a member of the Corporation, and is sworn in at the first meeting he attends.

See 2d Geo. 3. c. 19. s. 11. (Answer VI.)

The members' services are gratuitous.

Answer to Query No. II.

Duties of the Corporation, Committees, &c. &c.

The general supervision of the lights, buoys, and beacons on the Irish coast, the receipt and disbursement of all monies paid in respect thereof, and the direction and control of all persons engaged in their management.

The committees are appointed by selection from the members of the corporation. They are as follows:—

LIST OF COMMITTEES.

Library.	Lightship.	Inspecting.	Accounts.
Chas. Halliday. Robert Callwell. Geo. Roe. M. Stanton. The Earl of Meath. Sir J. Donbrain.	Sir J. Donbrain. The Earl of Meath. Col. La Touche. Chas. Halliday. Robert Callwell.	Sir J. Donbrain. Meath. Geo. Roe. Henry Thompson. Robert Callwell. Col. La Touche.	Thos. Cross-thwait. Mich. Stanton. Sir J. Donbrain. H. Thompson. J. P. Hardy. Thos. Bewley.

Life Boat Committee.	Harbour Byelaws Committee.	Graving Dock Committee.
Sir James Donbrain. Charles Halliday, Esq. Francis Codd, Esq. Colonel La Touche. Thos. Cross-thwait, Esq. Robert Callwell, Esq.	Charles Halliday, Esq. Francis Codd, Esq. Thomas Bewley, Esq. Sir James Donbrain.	Sir James Donbrain. Charles Halliday, Esq. Thomas Bewley, Esq. Jno. J. Robertson, Esq. Francis Codd, Esq. J. P. Hardy, Esq.

East Quay Wall Tax Committee.	Pilotage Committee.
Charles Halliday, Esq. The Lord Mayor. Thomas Cross-thwait, Esq. Alderman Kinahan. Alderman Moylan. Sir James Donbrain. George Roe, Esq.	Sir John K. James, Bart. Thomas Cross-thwait, Esq. Charles Halliday, Esq. Robert Callwell, Esq. Michael Stanton, Esq. Sir James Donbrain. Colonel La Touche. J. P. Hardy, Esq. Francis Codd, Esq. Thomas Bewley, Esq. The Earl of Meath.

The above are the Standing Committees of the Board, but others are appointed from time to time as special business may require; they are summoned whenever any important matters are referred to them; no record is, however, kept of their meetings.

Answer to Query No. III.

Days of Meeting, &c.

Ordinary days of meeting are Thursdays and Fridays in each week, but special meetings are summoned when any particular business requires to be transacted, and the offices are visited by one or more members of the Corporation nearly every day.

Answer to Query No. IV.

Names of members who attended each meeting in 1857 and 1858, with the dates of each attendance.

See reply to Query No. I, first part.

Answer to Query No. V.

Names of Members who have been employed on Special Services or Inspections, in 1857 and 1858, with a Statement showing the Nature of the Services on which they were employed, and the Time occupied:—

Name.	Nature of Service.	Time occupied.	1857.	1858.
The Earl of Meath, Sir Jas. Donbrain, Geo. Roe, Esq., Robt. Callwell, Esq., Colonel La Touche.	Inspecting light-houses, buoys, and beacons round the Irish coast.	16 days.	From 5th to 20th May inclusive.	
Sir Jas. Donbrain, The Earl of Meath, H. Thompson, Esq., Robt. Callwell, Esq.	Do.	19 days.	From 10th to 28th of September inclusive.	
Robt. Callwell, Esq., The Earl of Meath, Sir Jas. Donbrain.	Do.	12 days.		From 4th to 15th of May inclusive.
Sir Jas. Donbrain, G.A. Hamilton, Esq., The Earl of Meath, Geo. Roe, Esq., Chas. Halliday, Esq.	Waiting on President of Board of Trade as to procuring a steamer for permanent service of the Corporation.	3 days.	From 8th to 10th July.	
The Earl of Meath, Sir Jas. Donbrain, Thos. Cross-thwait, Francis Codd, Chas. Halliday, Esq.	Waiting on President of Board of Trade as to procuring a steamer for the permanent service of the Corporation.			19th and 20th April.

I. to IX.

CONSTITUTION OF GENERAL AUTHORITY, &c.

I. to IX.

Circular 1.
Questions
1. to IX.

The meetings of the Corporation are regulated by the Act, copy of which is herewith sent.

26 Geo. 3. c. 19.

First meeting to be on or before first May next.—A Ballast-office to be appointed.—Each member to take the oath herein.

5. And be it enacted by the authority aforesaid, that the members of the said Corporation hereby appointed, or some three of them, do and shall meet and assemble themselves at the Royal Exchange in Dublin, on or before the first day of May next, and do and shall at such meeting appoint and constitute one office in some proper and convenient place in the said city, which from thenceforth shall be called and known by the name of "The Ballast Office of the Port of Dublin;" and that each and every of the members of the said Corporation shall, before they or any of them proceed to execute the purposes of this Act, take and subscribe the following oath or affirmation:—

"I, B. do solemnly promise and swear, that I will faithfully and impartially, according to the best of my skill and knowledge, execute the several powers and trusts committed to me in and by an Act of Parliament now in force in this Kingdom, entitled 'An Act for promoting the Trade of Dublin, by rendering its Port and Harbour more commodious,' without favour or affection, prejudice or malice; and I do also solemnly swear, that I have not entered, and that during my being a member of the Corporation appointed by the said Act will not enter, into any contract, directly or indirectly, for executing the purposes of the said Act or any of them, or for supplying any materials for carrying on or executing the same, nor will I be engaged in any security for any person or persons holding or who shall hold any office by virtue of the said Act, or for any person or persons entering into or who shall enter into any contract relating to the execution of any part of the said Act.

"So help me God."

Which oath or affirmation any three or more of the said members are hereby empowered to administer to each other, and the same is to be entered in a book to be kept particularly for that purpose.

No Act deemed an Act of the Corporation if three members be not present.

6. And be it further enacted, that no act of the members of the said Corporation shall be deemed an act of the said Corporation unless there shall be at the least three members of the said Corporation duly assembled, present at such act, and that the act of the majority of the members present, not being fewer than three, at every meeting duly assembled, shall be and be considered as the act of the said Corporation.

May meet when they think proper.

7. And be it further enacted by the authority aforesaid, that from and after such time as such office shall be so appointed as aforesaid the said Corporation shall and may, at such times and as often as they shall think fit, meet and assemble themselves at the place so to be appointed, or at such other place as shall or may from time to time be appointed by them for such office, and shall and may at such meetings give and sign orders for the necessary, current, and usual expenditures for the carrying on the general and usual business of the said Corporation.

May summon a meeting when deemed necessary.—sign orders, —appoint officers.—establish salaries.—renew officers, —make rules, &c.—Such rules, &c. not to be contrary to law.

8. And be it further enacted by the authority aforesaid, that it shall and may be lawful to and for the said Corporation from time to time, when and as often as they shall think necessary or find it expedient, by summons to be left at the usual place of abode of each and every of the members of the said Corporation, to convene a meeting or meetings of the said Corporation to be held at the said office, which summons shall express the purpose for which such meeting shall be intended, and that it shall and may be lawful to and for the said Corporation, at such respective meeting or meetings so to be convened as aforesaid, to give and sign orders for the payment of all extraordinary or unusual expenditures which they shall find and judge necessary for carrying into execution the purposes of this Act, and to elect and appoint such officers as they shall think fit and proper for the execution of the several matters comprised in this Act, and to establish such salaries and allowances to be paid to such officer and officers, and every of them respectively, out of the produce of the payments and duties herein-after directed to be paid, as to the said Cor-

poration shall seem fit and reasonable, and the same to increase or diminish from time to time as to them shall seem reasonable, and also from time to time, when it shall appear to the said Corporation that such officers, or any of them, shall have been guilty of any neglect or improper conduct, to remove such officers or any of them, and to elect such others in their stead, as they shall think fit, and also from time to time to make and ordain such rules, orders, byelaws, and regulations for cleansing and improving the said port, harbour, and river of Dublin, and for regulating the conduct of the masters and owners of shipping resorting to the said port and harbour, in the throwing out and taking in their ballast, and in stationing and mooring their ships and vessels, and for regulating the conduct of the owners and managers of lighters, gabbards, and other vessels to be employed in furnishing ballast to and taking ballast from such shipping, and for securing of ships and vessels trading to the said port and harbour, and for regulating and conducting the business of the aforesaid office, and for the well governing of the said office, and the several officers and clerks to be employed therein, and in and about the business thereof, and for regulating the conduct of and well governing the several pilots, pilot-masters, and haven-masters to be appointed as herein-after mentioned, and for appointing the place in which such office as aforesaid shall be from time to time held, as the said Corporation shall judge necessary or expedient; all which rules, orders, byelaws, and regulations shall be as binding and conclusive, to all intents and purposes, as if the same were enacted by this Act: Provided such rules, orders, byelaws, and regulations, or any of them, or any matter therein to be contained, shall not be contrary to any of the laws or statutes of this realm, or to this Act, or any of the clauses herein contained.

Returns in writing to be made of all such proceedings, and laid before the Chief Governor and Council;—if disapproved of by them, void.

9. And provided also, that no such appointment or appointments as aforesaid, of any such officer or officers as aforesaid, or of the salary or salaries, allowance or allowances, to be paid to them or any of them, shall be valid, nor shall any rule, order, byelaw, or regulation to be made by the said Corporation be of any force or effect, unless a return in writing of such appointment or appointments, salary or salaries, allowance or allowances, as aforesaid, and a true copy of such rule, order, byelaw, or regulation as aforesaid, as the case shall happen to be, (which return or copy shall be under the seal of the said Corporation,) shall be laid before the Lord Lieutenant or other chief governor or governors and the Privy Council of this kingdom for the time being, by delivering the same at the office of the clerk of the Privy Council twenty-one days at least before such appointment or appointments, rule, order, byelaw, or regulation shall be intended to take effect; and if the said Lord Lieutenant or chief governor or governors and Privy Council shall, within the said twenty-one days, signify to the said Corporation at their said office their disapprobation of such appointment or appointments, rule, order, byelaw, or regulation respectively, the same shall be of no force or effect.

If their disapprobation be not signified within twenty-one days, such proceedings deemed valid.

10. Provided always, that if the said Lord Lieutenant or other chief governor or governors and Privy Council for the time being shall not within the said twenty-one days, to be computed from the day of delivering at the office of the clerk of the Council in manner aforesaid such return or copy as aforesaid, signify to the said Corporation at their said office their disapprobation of such appointment or appointments, rule, order, byelaw, or regulation respectively, the same shall from the time of the expiration of the said twenty-one days stand in full force and effect, notwithstanding that such Lord Lieutenant or chief governor or governors and Privy Council shall not have signified any express approbation thereof.

May elect members when vacancies happen.—The Lord Mayor, &c. to elect an alderman to be a member of said Corporation, when any of those hereby appointed shall die, &c.—Three aldermen to be always in the Corporation.

11. And be it further enacted by the authority aforesaid, that for continuing the succession of the said Corporation from time to time, when and as often as any of the said persons hereby named, or hereafter to be elected members of the said Corporation, shall happen to die, or resign, or refuse or decline to act, the remaining members of the said Corporation, at a meeting to be convened by public advertisement in the Dublin Gazette, and in such other public

I. to IX.

CONSTITUTION OF GENERAL AUTHORITY, &c.

I. to X.

IRELAND.
Circular I.
Questions
I. to IX.

newspaper in the city of Dublin as three or more of the said members shall appoint, and also by summons as aforesaid, shall from time to time elect, nominate, and appoint a fit and able person, or fit and able persons, to be member or members of the said Corporation, in the room and stead of such person or persons as shall so happen to die or resign, or refuse or decline to act, save only that in case such vacancy shall happen either by the death or resignation or by the refusing or declining to act of the said Alderman James Hamilton, Alderman William Alexander, or Alderman Henry Howison, then and in such case the Lord Mayor and Board of Aldermen of the said city shall, within twenty-one days from the time such vacancy shall happen, elect, nominate, and appoint one or more alderman or aldermen to be a member or members of the said Corporation, in the room of such of the said aldermen who shall so happen to die or resign, or refuse or decline to act, and shall continue so to do when any of the said aldermen shall die, resign, refuse or decline to act, so as that at all times hereafter there may be three aldermen of the said city in the said Corporation.

Upon neglect of Lord Mayor and Board of Aldermen for twenty-one days, it shall not afterwards be in their power.

12. Provided, that in case the said Lord Mayor and Board of Aldermen shall omit or neglect to make such election, nomination, or appointment as aforesaid within the said twenty-one days from the time such vacancy shall happen, the said Lord Mayor and Board of Aldermen shall not afterwards have any right or power of electing any alderman or aldermen or other person or persons in the room of such of the aforesaid aldermen as shall so happen to die, resign, or refuse to decline or act.

Such person to be approved of by the chief governor and Council.

13. Provided always, that no person so to be elected shall have power to act as a member of the said Corporation unless a return in writing, containing the name and addition of the person who shall be so elected, shall be laid before the Lord Lieutenant or chief governor or governors and Privy Council of this kingdom for the time being, by leaving the same at the office of the clerk of the Privy Council twenty-one days at least before such person shall in any manner act as a member of the said Corporation; and that if the said Lord Lieutenant, or chief governor or governors, and Privy Council, shall, within the said twenty-one days, signify to the said

Corporation at their said office their disapprobation of such election, and direct a new one to be made, then such election shall be void, and the said Corporation shall go to and hold in like manner a new election for the filling up such vacancy or vacancies, and so from time to time until such person shall be so elected as shall not be disapproved of by the Lord Lieutenant, or chief governor or governors, and Privy Council, as aforesaid.

If disapprobation be not signified within twenty-one days, the election valid.

14. Provided always, that if the said Lord Lieutenant or chief governor or governors and Privy Council for the time being, shall not within the said twenty-one days, to be computed from the day of delivering in manner aforesaid such return as aforesaid, signify to the said Corporation at their said office a disapprobation of such election as aforesaid, the same shall, from the time of the expiration of the said twenty-one days, be valid and effectual to all intents and purposes, notwithstanding that such Lord Lieutenant or chief governor or governors and Privy Council shall not have signified any express approbation thereof, and then and from thenceforth every person so to be elected shall have full power and authority to act and do in all things comprised in this Act, in as full, large and ample manner, to all intents and purposes, as any of the members hereby nominated and appointed.

Any member absent for three months without licence shall cease to be a member, unless prevented by sickness.

15. And be it enacted by the authority aforesaid, that if any of the persons now nominated or who shall hereafter be elected a member of the said Corporation, pursuant to the powers of this Act, shall continue to absent himself from the meetings of the said Corporation for the space of three calendar months, without licence from the said Corporation previously given and entered in the minutes of the said Corporation, such person shall, from and after the expiration of the said three months, be deemed and considered as having declined to act, and shall to all intents and purposes cease to be a member of the said Corporation, and the said Corporation shall proceed in manner herein-before directed to the election of and shall elect a person in the room of the person so absenting himself, unless it shall fully appear to the said Corporation that such person was prevented from attending the meetings of the said Corporation by sickness.

XII.

The accounts, both of the Receipts and Disbursements, are transmitted to this Corporation by their accountant quarterly.

Are audited quarterly by a Committee of this Corporation. Are transmitted quarterly to the Board of Trade, who audit them.

And the Board of Trade then transmit them to the Board of Audit for final adjustment.

J. HANKS,
Accountant of this Corporation.

Office, Port Dublin Corporation,
January 1860.

XIII.

The system employed in conducting the financial department of the establishment, &c.

The light dues in Ireland have always been received by the collectors of customs or their deputies at the various ports and creeks, and are remitted in bills or letters of credit on the Bank of Ireland, to this office, and are subsequently lodged to the credit of the Corporation's Revenue account, which, when it accumulates to 1,000*l.* or upwards, is drawn upon and the amount remitted by the Bank of Ireland, to be placed to the credit of Her Majesty's Paymaster-General, on account of the Mercantile Marine Fund.

With respect to obtaining money, an annual estimate under the several heads of expenditure is submitted to the Board of Trade, on which they sanction advances by the Paymaster-General to meet the necessary expenses; these advances are made through the Bank of Ireland, and are placed to the credit of the "drawing account." The demands from contractors, workmen's accounts, and bills for articles supplied, are submitted to the Board, and, if found certified by the proper officers, and in every way correct, are initiated by the chairman, and passed for payment; a draft signed by three members is then issued for the total amount of the bills, and the chief clerk makes payments accordingly, taking the proper receipts; and no

payments whatever are made except by draft issued by the Board in the manner already stated.

The accounts are subsequently submitted to one or more members of the accounts' committee, when they are examined, and, if found properly vouched, are initiated, and the result is reported to the Board, and a record of the fact placed upon their proceedings.

At termination of each quarter the accounts and vouchers are forwarded to the Board of Trade, where they are again minutely examined, and finally transmitted to the Audit Board as a portion of the expenditure of the Mercantile Marine Fund.

XIV.

Names, ages, dates of appointment, and salaries of the persons comprising the establishment of the office, &c., duties, &c.

Year to September 1859.

* The superintendent is allowed 100*l.* a year in lieu of residence, in addition to his salary.

† The secretary is allowed 150*l.* a year in lieu of residence, in addition to his salary.

‡ The marine inspector is solely employed in the lightship and buoy department.

The officers are daily employed in the services of both "lighthouses" and "port." In 1853 this subject was closely investigated by the Board of Trade, and their lordships decided that the port duties might be considered as about one third of the whole; the establishment was then regulated by an Order in Council on that principle, and all appointments since made have been in accordance with this rule.

XV.

Mode of selecting and appointing the officers.

When vacancies occur in the establishment, a reasonable time is given for all applications to be made to the Board, and advertisements in some cases inserted in the public papers, the Board are then specially summoned, and after due examination of the parties and their testimonials they select the names of the most eligible of the candidates (usually three), and proceed to a ballot. The party having the majority of votes is appointed, subject to the approval of the Lord Lieutenant (see 26 Geo. 3, c. 19, s. 9.) and the Board of Trade.

XXV.

Names of Lightkeepers.	Dates of Appointment.	Age when appointed.	Previous Employment.	Actual Employment when appointed.	By whom selected.	Mode of Examination, if any.
Thomas Moore	- 1854	18	Occasional temporary keeper, being son of a lightkeeper.	Answers in previous column applicable to this.	Selected and recommended to Board by Superintendent of Lighthouses.	The general usage is that the person selected to be a lightkeeper appears before the Board, when such questions are put to him as the Commissioners judge proper. Letters of recommendation are submitted, also testimonials of character from clergymen and magistrates of the locality in which the applicants have resided. In all cases a knowledge of reading, writing, arithmetic, and a moderately good education is held indispensable.
Richard Stapleton	- 1854	21	Do.			
William Legge	- 1854	44	Builder.			
Michael Power	- 1854	20	Boatman at lighthouse works.			
John Young	- 1854	18	Occasional temporary keeper, being son of a lightkeeper.			
Francis Dunne	- 1854	37	Messenger in Ballast Office.			
Michael O'Donnell	- 1855	19	Occasional temporary keeper, being son of a lightkeeper.			
Robert Phelan	- 1855	18	Do.			
Daniel Somers	- 1855	21	Tradesman in service of Port of Dublin Corporation.			
Charles Page	- 1855	19	Occasional temporary keeper, being son of a lightkeeper.			
John Whelan	- 1856	20	Do.			
William Brownell	- 1857	19	Do.			
Robert Redmond	- 1857	26	Tradesman in service of Port of Dublin Corporation.			
George Kelly	- 1857	46	Do.			
Henry Gardener	- 1857	28	Occasional temporary keeper, being son of a lightkeeper.			
John Donlevy	- 1857	38	Coast guard service, and afterwards watchman during building of Dundalk Lighthouse.			
Joseph Monks	- 1857	27	Hosier and occasional temporary keeper, being son-in-law of lightkeeper.			
Patrick Keenan	- 1858	22	Tradesman in service of Port of Dublin Corporation.			
William Callaghan	- 1858	27	Do.			
Jervis Brownell	- 1858	19	Occasional temporary keeper, being son of a lightkeeper.			
Thomas Redmond	- 1858	22	Do.			
James Williams	- 1859	21	Do.			
Thomas Reilly	- 1859	23	Do.			
John McKenna	- 1860	20	Do.			

Ballast Office, Dublin, November 1860.

GEORGE HALPIN,
Superintendent of Lighthouses.

RETURN OF MASTERS appointed to the Command of Lightvessels of the Port of Dublin Corporation since the 1st of January 1854.

NAME.	Date of Appointment as Master.	Age at the time of Appointment.	Employment previous to joining Service of Corporation.	Actual Employment when promoted to Master.	By whom selected as Master.	Mode of Examination, if any.
Alexander Crichton	1 Jan. 1855	47	In North American trade.	Mate of the Kish Bank lightvessel.	Recommended by Marine Inspector.	Having served as mate in a lightvessel for 21 years, an examination for master was not considered necessary, as the duties of master and mate are similar, they having charge alternately each month.
William Braden	1 Sept. 1857	47	Master of a merchant vessel trading to Bordeaux.	Mate of the Arklow Bank lightvessel.	Recommended by Marine Inspector.	Having served as mate of a lightvessel for 15 years, an examination for master was not considered necessary. <i>Note.</i> —No person is appointed mate of a lightvessel unless he has previously passed for mate before the Mercantile Marine Board.

E. F. ROBERTS, Commander, R.N., Marine Inspector.

XXVI. In 1844, Mr. Halpin, the present superintendent of lighthouses, suggested a mode of distinguishing the light then about to be exhibited at St. John's point, Dundrum Bay, by an apparatus for making it intermittent. This was accomplished, and was the first of the kind introduced in Great Britain, although a different arrangement of intermittent apparatus had previously been used in Scotland by Mr. Stephenson.

Some modification of this plan has since been adopted in Ireland and elsewhere, in such positions as a difficulty was found in distinguishing lights from each other.

In 1851, Mr. Babbage proposed what he called his "numerical system," but as the plan suggested was not considered so effective, in some respects, as the distinction attainable by revolving or flushing lights, it was not adopted.

CIRCULAR NO. II.—LIGHTHOUSES.—GENERAL RETURN.

III. General principles which regulate the choice of site for lighthouses are those now generally adopted by other lighthouse authorities. The selection for sea lights the most salient points are selected, such as Inishtrahull Island, Tory Island, Slyne Head, Rathlin Island. Off shore rocks, as Skelligs Rock,

Fastness Rock, Tuskar Rock, Rockabill, Maiden's Rocks, especially when such sites are available for guidance along a line of coast, and in approaching its principal harbours. In harbours and channels of estuaries, or of navigable rivers, selection is made of sites most useful in guiding safely through the channels, and in marking tidal rocks and other dangers, as Tarbert Rock, Beeves Rock, &c.

- V. It is generally considered inexpedient to exceed heights of from 150 to 200 feet. Elevated positions are frequently liable to be obscured by fogs. It has, however, in a few cases been found necessary to exceed the heights of 200 and even 300 feet over the sea.
- VI. The description of apparatus heretofore used in the lighthouses of Ireland have been the catoptric, catadioptric, and dioptric. Different modification of arrangement being practicable with each description of apparatus named.
- VII. Selection of the particular description of illuminating apparatus adopted at each site is made according to the distance at which it is required that the light should be seen, the portion of the circle to be lighted, the distinctive character of lights previously established on the same coast, and from which the new light to be established should be strongly distinguished.
- VIII. Different characters of illuminating apparatus employed:—fixed, revolving, flashing, intermitting, with modification. Some of the flashing lights might be termed fixed, varied by flashes, in cases in which the upper and lower tiers of prismatic zones are fixed, and the flashes produced by the motion of the polygonal lenses; but in such cases the peculiar character is the flash.
- IX. In modern lights the general principles which govern the selection of the character of illuminating apparatus have been based on the requirements of the case in each instance, as—the distance to which it would be useful that the light should be seen, the number and character of neighbouring lights previously established, the adoption of a distinctive character readily distinguishable with certainty.
- X. Drawing or tracing of each description of illuminating apparatus used has been prepared.
- XI. Copy of table has been filled.
- XII. All the important lighting stores (as indeed most other stores are supplied by open contract, as lamp oil, rapeseed, or colza), lamp glasses, cotton wicks, The lamp oils are tried by burning in lamps, examination of specific gravities, running through tube of small diameter, dropping of acids on their films of the oil tried,—trials by burning and by gravities, and with alcohol, being the most ready and certain. Ordinary stores are usually supplied by open contract, as coals, timber, and articles used in repairs of lighthouses.
- XIII. The only fog-signals heretofore used in the lighthouses under management of this corporation have been fog bells struck by machinery worked by weights. Gongs have been used in the light-vessels of the corporation.
- XIV. The only tide signals used have been half-tide signals, as at Rollbeg and Carlingford. During day time signal balls being raised at half-flood, and kept up until half-ebb, when they are lowered. During night, half-tide lights are shown at nearly mid height of the tower.
- XV. Merchants and others at Strangford, co. Down, memorial for a light on "Rock Angus," at the entrance to that Lough.—1846.
- Corporation reply that a beacon is about to be erected there, which it is hoped will answer the purpose.—1846.
- Beacon since erected.
- Cork Harbour Commissioners apply for a light on "Cable Island," co. Cork.—January 1846.

IRELAND.
Circular II.

XIV. XV. XVI.

LIGHTHOUSES—GENERAL RETURN.

XVII. XVIII. XIX.

Board resolve to erect one there, March 1846. Commissioners informed accordingly.

Ship owners and others at "Tralee," memorial for a harbour light on "Sapphire Island."—June 1846.

Since erected.

Inhabitants of "Dingle" apply for a light at that harbour.—October 1846.

Not complied with.

Dundalk Harbour Commissioners apply for two lights at the entrance of that bay.—January 1846.

Trial screw pile-driver at the entrance of harbour 1848; and light since exhibited there, 1855.

Inhabitants near Broadhaven, memorial for a light at that place.—October 1846.

Beacon tower erected, and since converted into a lighthouse, and light exhibited 1855.

Lord Monteaige applies for a light at "Foynes," River Shannon.—November 1846.

After due consideration it was decided to erect a light on "Beave's Rock" instead of at Foynes, March 1847. Limerick Harbour Commissioners informed accordingly.

Light since erected.

Londonderry Harbour Commissioners apply for a light on "Rathlin-o-birne."—October 1846.

Board resolve to erect a lighthouse there, January 1847. Commissioners informed accordingly.

Lighthouse since erected.

Lord Courtown applies for a light at Courtown Harbour, co. Wexford.—September 1847.

Not complied with, being purely local.

Relief Committee at Dingle apply for a light at that harbour.—December 1847.

Not complied, being solely for local purposes.

Cork Harbour Commissioners apply for lights at "Ballycotton and Ballymacraut Head," co. Cork.—February 1848.

Board resolve to erect lighthouses on Ballycotton, Minehead, and Youghal. Parties informed accordingly, April 1848.

All three lights since exhibited.

Lord Bernard forwards memorial from parties praying for a light on "Gally Head," co. Cork, 1848.

Consideration postponed.

Application from parties in the vicinity of Newcastle for a light on the pier of that harbour.—July 1848.

Small lighthouse erected.—1849.

Mr. Giles forwards application for a light at Dungarvan.—1848.

Informed that Board will erect one there.—November 1848.

Since erected.

XVI. With respect to light apparatus, actual trial of the apparatus, examination of the parts, comparison with apparatus procured from the same or other manufacturers, regard being chiefly had as to the practical effect at various ascertained distances, and as viewed from seaward.

XVII. This corporation apply for power to construct a lighthouse at "Straw Island," "Galway Bay."—4th November 1854.

Board of Trade refuse to sanction, on the grounds that the benefit would be purely local.—29th November 1854.

This board recommend the establishment of

lights at "Calf Rock," "Black Rock," and "Foze Rock."—January 1857.

Board of Trade sanction the two first-named, but defer consideration of the latter to a future day.—June 1857.

This corporation recommend the modification of the lights at St. John's Point, Kish, Arklow, and Blackwater Bank, on the exhibition of Rock-a-Bill light.—January 1859.

Board of Trade comply.—March 1859.

This board recommend the re-establishment of the suppressed light at "Aranmore," county of Donegal, and the modification of the lights at Tory and "Rathlin-a-beirne" islands.—June 1859.

Board of Trade comply.—November 1859.

XVIII. Copies of regulations and copies of printed forms in use relating to lighthouses have been collected.

XIX. The Port of Dublin Corporation, since vested with control of the lighthouses in Ireland in 1811, have in better positions built new lighthouses in lieu of most of the old lighthouses erected by the Revenue Board, as Howth Baily, Wicklow, Old Head of Kinsale, Fastness Rock, in lieu of Old Cape Clear light, Loophead, Aran, two lights at extremities of the chain of islands in lieu of the old light on summit of the Great Aran Island, and have constantly endeavoured to procure the best and most modern apparatus, as will appear on comparison of some of the dioptric apparatus last erected with that of earlier date.

Reference to the accompanying book of charts and to the special returns will explain, by examples, the general principles adopted in selecting sites for lighthouses, and different character of illuminating apparatus employed.

XIX. In reply to Queries No. 19, in General Lighthouse and No. 20, in General Floating Light Return, and as directed by letter No. 702, 11th June 1859.

Subjects of correspondence with the Trinity Board or Board of Trade, in which requests, suggestions, or remonstrances have been made by the Port of Dublin Corporation on subjects which they have considered of importance to the interests in their charge, but on which the views enforced by them have not met with the concurrence of these departments.

This corporation recommend the establishment of a light on Straw Island, Galway Bay.—4th November 1854.

Board of Trade refuse to sanction the expense, on the grounds that the benefit would be only local.—29th November 1854.

This corporation again apply for a light on Straw Island, Galway.—30th December 1854.

Board of Trade refuse to sanction, for reason before stated.—8th January 1855.

This corporation apply for leave to place a fog bell at Dundalk lighthouse.—16th February 1856.

Board of Trade refuse to sanction expense, being for local purposes.—11th March 1856.

The corporation apply for the permanent use of a steamer.—23d August 1856.

Board of Trade refuse to sanction.—15th September 1856.

This corporation recommend the establishment of a light on "Gally Head," S.W. coast of Ireland, in connection with other lights.—10th March 1857.

Trinity House will not agree to recommend to Board of Trade as a passing light.—4th April 1857.

This corporation apply, by a deputation to Board of Trade, for the permanent use of a steamer.—9th July 1857.

Board of Trade refuse to sanction.—9th July 1857.

A similar application by a deputation is made in March 1858.

Board of Trade again refuse to sanction.—March 1858.

This corporation recommend the better marking of the approaches to Galway.—9th October 1858.

Board of Trade refuse to sanction expense, on the grounds of the benefit being purely local.—16th October 1858.

This corporation recommend that the "Tun Bank" buoys (Londonderry) should be taken

XIX.

LIGHTHOUSES.—GENERAL RETURN.

XIX.

IRELAND.
Circular II.

under their jurisdiction, being outside the limits of the jurisdiction of the harbour authorities.—27th August 1859.

Board of Trade refuse to sanction unless a charge be made on shipping for their maintenance.—8th November 1859.

This corporation recommend the substitution of dioptric for catoptric apparatus at Tory Island, Roches' Point, and Copeland Island.—22d October 1859.

Board sanction expense at Tory Island, but refuse to sanction at Roches' Point or Copeland Island.—1st November 1859.

This corporation recommend (again) the placing of a fog gun on board the "Kish" lightship.—22d November 1859.

Board of Trade adhere to former opinion, and refuse to sanction.—3d December 1859.

This corporation recommend the placing of a light on Straw Island, Galway Bay.—25th November 1859.

Board of Trade sanction only on condition that the local authorities contribute two thirds of cost of its maintenance.—24th December 1859.

This corporation recommend (through the Trinity Board) the placing of a fog gun on board the "Kish" lightship.—19th February 1859.

Board of Trade refuse to sanction, on the grounds of additional expense, and that *it might be mistaken for the gun at Holyhead*, but suggest that a bell, in lieu of the gong, be substituted if the latter be found insufficient.—18th April 1859.

This corporation recommend that the sum of 15*l.* should be contributed towards the expense of the pier near the lighthouse at "Larne," which is a great convenience to the lightkeepers.—15th August 1859.

Board of Trade refuse to sanction, on the grounds that the benefit would be local.—3d September 1859.

This corporation recommend the placing of a light on the "Spit of Passage," and a beacon on the "Falskirt Rock, Waterford," to enable vessels to take shelter in the harbour.—6th December 1859.

Trinity Board refuse to recommend to Board of Trade, being, as they state, more for local than general purposes.—14th December 1859.

This corporation again apply for a light on Straw Island, Galway Bay.—11th February 1860.

Board of Trade adhere to their former decision, viz., that the local authorities should contribute two-thirds towards its maintenance.—22d February 1860.

This Corporation recommend the placing of a beacon to mark the "Pladdy Lug," Lough Strangford.—May 1858.

Board of Trade refuse to sanction, being purely for local benefit.—June 1858.

Lord George Hill applies to have "Gweedare" Harbour marked.—July 1854.

Board of Trade refuse on the ground that the benefit would be purely local.—August 1854.

CIRCULAR NO. III.—LIGHTHOUSES.—SPECIAL RETURN.

The numbers to the Answers correspond to the Arabic numbers at the Questions in Circular III.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

129.

POOLBEG.

East Coast of Ireland, on outer End of South Pier, Dublin Harbour.

Lat. $50^{\circ} 20' 30''$, Lon. $6^{\circ} 9' 16''$ W.

3. Port of Dublin Corporation.
4. Two lights, an upper and a lower; the lower light is a half-tide light.
5. Not ascertained.
6. Not ascertained.
7. To guide from seaward into Dublin Bay, and to light from the Kish Bank to the bar through the Bar Channel, and within inner reach of the Harbour Channel.
8. 1768.
10. Harbour light.
11. Cut stone tower, solid walling, of circular form, coloured white.
12. No separate external conductor.
13. 63 feet.
14. 68 feet.
15. 8 miles.
16. 12 miles.
17. 225° S. W. $\frac{1}{2}$ S. to W. N. W.
18. Fixed; light of the natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company.
25. Through dome of lantern.
26. Two fog bells struck by machinery.
27. 22 days.
28. 22 days.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high, *l*.
32. Not purchased.
33. *l*. 15s. 6d.
34. Coated with paint once every year, 51*l*. 9s. 1d. Paints procured by contract; workmanship not by contract.

37. 1857, repairs, 1*l*. 8s.; cylinders, 7*l*. 4s.; cleaning stores, 2*l*. 3s. 4d. 1858, repairs, 1*l*. 10s.; cylinders, 7*l*. 4s.; cleaning stores, 2*l*. 3s. 4d.
38. 1857, oil, 970 gallons; wicks, 15 gross. 1858, oil, 1,037 gallons; wicks, 15 gross.
39. Pale rapeseed oil. 1857, 4s. 2½*d*. per gallon. 1858, 3s. 5*d*. per gallon.
40. Argand cotton wicks. 1857, 3s. 6*d*. per gross; 2*l*. 12s. 6*d*. total cost. 1858, 3s. 6*d*. per gross; 2*l*. 12s. 6*d*. total cost.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
48. 1852, quarter, nil.
44. 1852, 857*l*. 6s. 8*d*. 1858, 885*l*. 4s. 1*d*.
45. None.
46. None.
47. None.
48. No representation made as to the light being unnecessary, or placed in an unsuitable position.
49. None.
50. By Committee of the Board and by the Superintendent of Lighthouses.
51. Inspected on several occasions in 1857. Ditto, in 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store adjoining lighthouse.
54. None in 1858.
55. Light shown in lower lantern in tower from half-flood to high water, and from high water to half ebb. Black ball borne on staff, raised and shown during same periods of tide.
56. No other night signals than the tide signals are used.
57. Keeper on watch relieved in the lightroom at 12 o'clock, mid-night. Keepers changed from the station as changes from other lighthouses require and allow.

130.

KINGSTOWN, WEST.

East Coast of Ireland, Centre of West Pierhead.

3. No local authority.
4. One light. There is a revolving light on the east pierhead, which is the principal light of the harbour, and for which there is a special return.
5. Lights on pierhead formed part of the original design for harbour.
6. Commissioners of Kingstown Harbour.
7. As being the centre of west pierhead, and best position subsidiary to the east pier light to define limits of entrance of harbour.
8. 1845.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation, Superintendent of Lighthouses. Built under his direction by workmen of the Corporation, and not by contract.
10. Harbour light.
11. Cut stone, solid walling, tower is circular, its shaft of the natural colour of the stone (granite), dome coloured white.
12. No separate external conductor. Central metal column and metal stairs forms a continuous conductor from top to base of tower.
13. 29 feet.
14. 36 feet.
15. 6½ miles.
16. 4 miles.
17. 270°.
18. Fixed.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 4th order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company.
25. Through dome of lantern.
26. None.
27. None.
28. None.
- 29.
30. Finished.
31. Lantern sash 2 feet in diameter, 8 feet high, *l*.
32. Not purchased.
33. 2*l*. 15s. 6*d*.
34. Coated with paint once every year, 19*l*. 3s. 5*d*. Paints procured by contract; workmanship not by contract.
35. One keeper at 4*l*. 6s.
37. 1857, cylinders, 18s.; cleaning stores, 10s. 10*d*. 1858, cylinders, 18s.; cleaning stores, 10s. 10*d*.
38. 1857, oil, 56 gallons; wicks, 1 gross. 1858, oil, 54 gallons; wicks, 1 gross.
39. Pale rapeseed oil. 1857, 4s. 2½*d*. per gallon. 1858, 3s. 5*d*. per gallon.
40. Argand cotton wick. 1857, 3s. 6*d*. per gross. 1858, 3s. 6*d*. per gross.
41. None.
42. From Mercantile Marine Fund.
43. For No. 43 see Kingstown East. Two lights charged as one.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Board, and by the Superintendent of Lighthouses.
51. From proximity of the lighthouse to Dublin, often inspected during every year.
52. Not known to have been extinguished.
53. Spare lamp and burner kept. Oil stored in oil store at light-keeper.
54. None in 1858.
55. No tide signals used; no application made to have them used. The harbour is navigable at low water by the class of steamers and vessels which resort there.
56. No night signals used; not found requisite.
57. One keeper.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

131.

KINGSTOWN, EAST.

East Coast of Ireland, on Centre of East Pierhead.

Lat. 53° 18' N., Lon. 6° 8' W.

3. No local authority.
4. One light.
5. Light determined on as a necessary part of the plan for Kingstown Harbour.
6. Light on the pierhead was proposed by the engineer of Kingstown Harbour.
7. To guide from seaward to Kingstown Harbour, and to light the entrance between the pierheads, and for guidance within the harbour.
8. 1822 (first old light, since removed).
9. Present lighthouse and dwellings designed by late George Halpin, Engineer to Port of Dublin Corporation, built from his designs by Mr. Muller, contractor under Board of Works for Kingstown Harbour Works. Lantern erected by Port of Dublin Corporation.
10. Harbour light.
11. Cut stone; solid walling; tower and dwellings around of circular form. Since erection of lighthouse a battery has been built around pierhead, over which the upper part of lighthouse is visible.
12. No separate external conductor. Usual arrangement of wrought-iron handrail.
13. 41 feet.
14. 41 feet.
15. 7 miles.
16. 10 miles.
17. 304° S.E. $\frac{1}{4}$ E. to S. $\frac{3}{4}$ W.
18. Revolving, showing white and red lights alternately.
19. Strong light or flash appears every half minute; the red light, appearing once in every minute.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 3rd order.
23. No alteration in the general character of the illuminating apparatus.
24. Reflectors from the Soho Plate Company. Revolving machine by Gegg of Dublin. Wrought-iron frame by workmen of the Corporation.
25. Usual arrangement through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. Large fog bell struck by machinery. Fog bell is placed in a detached belfry.
27. 52 days.
28. 52 days.
29. Not ascertained; the building erected from the designs of the Engineer of the Port of Dublin Corporation, having been erected by Board of Works from funds granted for construction of the pier and harbour.
30. Finished.
31. Lantern sash, 8 feet diameter, 6 feet high. 489*l.* (including cut stone blocking.)
32. Not purchased.
33. 2*l.* 15*s.* 6*d.*
34. Coated with paint once every year, 19*l.* 3*s.* 5*d.* Paints procured by contract; workmanship not by contract.
35. Two keepers at 46*l.* 3*s.* each.
36. Lighting apparatus, 237*l.*; machine, 127*l.*; 35*l.* Total, 399*l.*
37. 1857, repairs, 2*l.* 8*s.*; cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 2*s.* 8*d.* 1858, repairs, 7*l.* 12*s.* 11*d.*; cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 2*s.* 8*d.*
38. 1857, oil, 163 *g* 11*ons*; wicks, 5 gross. 1858, oil, 167 gallons; wicks, 5 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 17*s.* 6*d.* total cost. 1858, 3*s.* 6*d.* per gross; 17*s.* 6*d.* total cost.
41. Large bell, 229*l.*; machine, 170*l.*; belfry, &c. 214*l.* Total, 613*l.*
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 36*l.* 5*s.* 6*d.* 1858, quarter, 9*l.* 0*s.* 5*d.* Total for 1852, 145*l.* 1*s.* 11*d.*
44. 1858, 180*l.*
45. None.
46. None.
47. None.
48. No complaint or representation as to the light being unnecessary or in an unsuitable position.
49. None.
50. By Committee of the Corporation and by the Superintendent of Lighthouses.
51. From proximity of the lighthouse, often inspected during every year.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store near to the lighthouse.
54. No one in 1858.
55. No tide signals used; no application made to have them used. The harbour is navigable at low water.
56. Signal mast and flag. No night signals used; not found requisite.
57. The keeper on watch relieved from the lightroom at 12 o'clock, midnight.

132.

WICKLOW, LOWER.

East Coast of Ireland, on the Point of Wicklow Head.

Lat. and Lon. as stated on Special Return for Wicklow, Upper.

3. No local authority.
4. One light in lower tower; distant from the Wicklow Upper Lighthouse 180 yards, bearing S.E. by E. $\frac{1}{4}$ E. The upper and lower lights kept in line lead through the Wicklow swash or channel between the banks.
5. Not ascertained; two old lighthouses, of which one tower is still left standing as a sea mark, were transferred from the Revenue Board in 1810. The Port of Dublin Corporation adopted present positions, farther out on Wicklow Head.
6. Not ascertained.
7. A coast light being requisite there, next southward of the Dublin Bay Lights, and as a fitting position for leading lights to guide through the Wicklow swash to the channel within the banks.
8. 1818, first exhibition of present lights.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation. Built under his direction by the workmen of the Corporation, not by contract.
10. Sea light.
11. Cut stone tower; circular; built with solid walling; painted white externally. The two lights (upper and lower) mark the position by day.
12. No separate external conductor; usual arrangement of wrought iron handrail to form a continuous conductor from lantern to base of tower.
13. 46 feet.
14. 121 feet.
15. 12 $\frac{1}{2}$ miles.
16. 17 miles.
17. 220° N. to S.W. $\frac{1}{2}$ S.
18. Fixed; light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in the general character of the light; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company (Boulton and Watt).
25. Through dome of lantern; there are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None.
27. None.
28. 22 days.
29. 9,213*l.*, including cost of lantern light, apparatus, &c.
30. Finished.
31. 950*l.* (including cut stone blocking.)
32. Not purchased; erected by Corporation.
33. 3*l.* 0*s.* 10*d.*
34. Coated with paint once every year, 33*l.* 17*s.* 1*d.* Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 64*l.* 12*s.* 4*d.*; one at 46*l.* 3*s.*
36. 675*l.*; 100*l.* Total, 775*l.*
37. 1857, cylinders, 5*l.* 8*s.*; cleaning stores, 2*l.* 4*s.* 4*d.* 1858, repairs, 15*l.* 7*s.* 8*d.*; cylinders, 5*l.* 8*s.*; cleaning stores, 2*l.* 4*s.* 4*d.*
38. 1857, oil, 652 gallons; wicks, 11 gross. 1858, oil, 662 gallons; wicks, 11 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2 $\frac{1}{2}$ *d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross, 1*l.* 18*s.* 6*d.* total cost. 1858, 3*s.* 6*d.* per gross, 1*l.* 18*s.* 6*d.* total cost.
41. None.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 877*l.* 14*s.* 11*d.* 1858, quarter, 765*l.* Total for 1852, 3,510*l.* 19*s.* 6*d.*
44. 1852, 429*l.* 19*s.* 14*d.*, including cost of carriage of oil and other stores. 1858, 344*l.* 9*s.* 4*d.*, ditto.
45. None.
46. None.
47. None.
48. No representation or complaint.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store, close to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; no application made for use of tide signals.
56. Signal mast and flag; no night signals used.
57. Keeper on watch relieved in lightroom at 12 o'clock, midnight. Keepers are changed from the station as removals from other lighthouses require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

133.

WICKLOW, UPPER.

East Coast of Ireland, on the Point of Wicklow Head.

Lat. 52° 57' 50" N., Lon. 6° 0' 5" W.

3. No local authority.
4. One light; distant from the Wicklow Lower Light 180 yards, bearing N.W. by W. $\frac{3}{4}$ W.
5. Not ascertained; two old lighthouses, of which one tower is still left standing as a sea mark, were transferred from the Revenue Board in 1810. The Port of Dublin Corporation adopted the present positions, farther out on Wicklow Head.
6. Not ascertained.
7. A coast light being requisite there, next southward of the Dublin Bay Lights, and as a fitting position for leading lights to guide through the Wicklow swash to the channel between the banks.
8. 1818, first exhibition of present lights.
9. Designed by the late George Halpin, Engineer to Port of Dublin Corporation. Built under his direction by the workmen of the Corporation, not by contract.
10. Sea light.
11. Cut stone tower; circular; built with solid walling; painted white externally. The two lights (upper and lower) mark the position by day.
12. No separate external conductor; usual arrangement of wrought iron handrail to form a continuous conductor from lantern to base of tower.
13. 75 feet.
14. 250 feet.
15. 18 miles.
16. 22 miles.
17. 22° N. to S.W. $\frac{1}{2}$ S.
18. Fixed; light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in the general character of the light; burners adapted for use of raperseed oil.
24. Reflectors from the Soho Plate Company.
25. Through dome of lantern; there are also ventilators in blocking and floor of lightroom to regulate supply of air.
26. None.
27. None.
28. 22 days.
29. 9,21*l.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. 950*l.* (including cut stone blocking.)
32. Not purchased; erected by Corporation.
33. 3*l.* 0*s.* 10*d.*
34. Coated with paint once every year, 3*l.* 17*s.* 1*d.* Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 64*l.* 12*s.* 4*d.*; one at 46*l.* 3*s.*
36. 675*l.*; 100*l.* Total, 775*l.*
37. 1857, cylinders, 5*l.* 8*s.*; cleaning stores, 2*l.* 4*s.* 4*d.* 1858, repairs, 8*l.* 11*s.* 6*d.*; cylinders, 5*l.* 8*s.*; cleaning stores, 2*l.* 4*s.* 4*d.*
38. 1857, oil, 651 gallons; wicks, 11 gross. 1858, oil, 665 gallons; wicks, 11 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross, 1*l.* 18*s.* 6*d.* total cost. 1858, 3*s.* 6*d.* per gross, 1*l.* 18*s.* 6*d.* total cost.
41. None.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 877*l.* 14*s.* 11*d.* 1858, quarter, 765*l.* Total for 1852, 3,510*l.* 19*s.* 6*d.*
44. 1852, 429*l.* 19*s.* 1*d.*, including cost of freight of oil and other stores. 1853, 344*l.* 9*s.* 4*d.*, ditto.
45. None.
46. None.
47. None.
48. No representation or complaint.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store close to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; no application made for use of tide signals.
56. Signal mast and flag; no night signals used.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers are changed from the station as removals from other lighthouses require and allow.

134.

TUSKAR ROCK.

East Coast of Ireland, off East Coast of County of Wexford.

Lat. 52° 12' 9" N., Lon. 6° 12' 21" W.

3. None. Lightkeeper holding constant communication with Ballast Office, Dublin, transacts the business of the station.
4. One light.
5. 1811.
6. Chamber of Commerce, Waterford.
7. As the best position for a general sea light on that south-eastern angle of the coast, and in order to mark the Tuskar Rock, and other dangers in the vicinity.
8. 1815.
9. Designed by (the late) George Halpin, Engineer to Port of Dublin Corporation, built under his direction by the workmen of the Corporation, and not by contract.
10. Sea light.
11. Cut stone tower, solid walls, coloured white outside, identified by its appearance as a lofty circular tower with projecting gallery below lantern, and standing on a low rock $\frac{1}{2}$ miles distant from the mainland.
12. No separate external lightning conductor.
13. 110 feet.
14. 101 feet.
15. 11 $\frac{1}{2}$ miles.
16. 15 miles.
17. 360°. Lighted all around the circle.
18. Revolving. Two sides of light of natural colour, white, and one red.
19. Light flashes every second minute, appearing of red colour every sixth minute. Flash lasts nearly ten seconds, gradually increasing and declining in strength.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. Burners suited to use of raperseed oil.
24. Parabolic reflectors by the Soho Plate Company.
25. Ventilation through dome. Ventilation also in blocking to floors of lightroom to regulate supply of air.
26. Bells tolled by machinery.
27. 14 days.
28. 14 days.
29. 35,877*l.*, including all expenses to year 1818.
30. Lighthouse finished. It is intended to have an addition built on the dwelling annexed to the tower outside.
31. Lantern sash 13 feet in diameter, 8 feet high. 1,097*l.* (approximate.)
32. Was not purchased, was built by the Port of Dublin Corporation.
33. 4*l.* 16*s.* 1*d.*
34. General coating of paint once in each year. 61*l.* 1*s.* 5*d.* Paints procured by contract. Workmanship not by contract.
35. Two keepers; one at 64*l.* 12*s.* 4*d.*, one at 46*l.* 3*s.*
36. 1,999*l.* (approximate.)
37. 1857, repairs, 19*l.* 2*s.*; cylinders, 7*l.* 8*s.*; cleaning stores, 2*l.* 5*s.* 4*d.* 1858, cylinders, 7*l.* 8*s.*; cleaning stores, 2*l.* 5*s.* 4*d.*
38. 1857, oil, 729 gallons; wicks, 12 gross. 1858, oil, 744 gallons; wicks, 12 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; total cost, 2*l.* 2*s.* 1858, 3*s.* 6*d.* per gross; total cost, 2*l.* 2*s.*
41. 450*l.* (probable.)
42. Light maintained from Mercantile Marine Fund. Revenue is collected and paid as per statement in Special Return No. 1.
43. 1852, 872*l.* 14*s.* 5*d.* 1858, 765*l.* 7*s.* 7*d.* Total for 1852, 3,490*l.* 17*s.* 7*d.*
44. 1852, 1,052*l.* 0*s.* 2*d.*, including attendance of decked cutter and freight of stores. 1858, 671*l.* 18*s.* 3*d.* ditto.
45. None.
46. None.
47. None.
48. No representation as to the light being either unnecessary or placed in an unsuitable position, but on the contrary, it has been frequently referred to as of great importance and use, from its position.
49. None; the light has often been mentioned in published statements as being very efficient.
50. By Committee of the Board and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857 and 1858.
52. Not known to have been extinguished on any occasion since first lighted.
53. At least one spare lamp and two spare burners kept in readiness. Oil stored in oil store in the lighthouse.
54. Barometer and thermometer.
55. No tide signals; from the distance of the rock from the shore not requisite. No application made from any quarter for the exhibition of tide signals at the station.
56. Signal mast and flag.
57. Keeper on watch relieved in lightroom at 12 o'clock midnight. Keepers are changed from the station as changes from the other stations require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

135.

HOOK TOWER.

South Coast of Ireland, on outer End of Hook Point, East Side of Entrance to Waterford Harbour.

Lat. $52^{\circ} 7' 25''$ N., Lon. $6^{\circ} 55' 53''$ W.

3. No local authority.
4. One light.
5. Not ascertained.
6. Not ascertained.
7. Position of old beacon tower adopted and continued. Useful and requisite as a sea light before the erection of the Tnskar and Minehead sea lights, and before the placing of the Saltees or Coningbeg (floating) lights, serving also to guide from seaward to Waterford Harbour, and to light the channel from the Hook Point to the bar.
8. 1791 (as a lighthouse light).
9. Name of builder and engineer of the Old Hook Tower not ascertained. Lantern erected by Port of Dublin Corporation.
10. Sea light.
11. Massive stonework, chiefly rubble in courses. The floors on arches of masonry. Tower is circular, coloured white, with three broad red belts.
12. No separate external conductor.
13. 115 feet.
14. 152 feet.
15. 15 miles.
16. 18 miles.
17. 294° N.N.E. $\frac{1}{2}$ E. to E.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Co.
25. Through dome of lantern. There are also ventilators in the blocking of lightroom to regulate supply of air.
26. Two fog bells struck by machinery.
27. 21 days.
28. 21 days.
29. Improvements, 4,300*l.*, such as lantern, apparatus, &c.
30. Finished.
31. Lantern sash, 11 feet diameter, 6 feet high. 750*l.* total cost.
32. Not purchased, transferred by the Revenue Board to the Port of Dublin Corporation.
33. 3*l.* 15*s.*
34. Coated with paint once every year, 39*l.* 7*s.* 8*d.* Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 64*l.* 12*s.* 4*d.*; one at 46*l.* 3*s.*
36. 945*l.* total cost (approximate).
37. 1857, cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 3*s.* 4*d.* 1858, repairs, 23*l.* 13*s.* 8*d.*; cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 3*s.* 4*d.*
38. 1857, oil, 811 gallons; wicks, 13 gross. 1858, oil, 826 gallons; wicks, 13 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 2*l.* 5*s.* 6*d.* total cost. 1858, 3*s.* 6*d.* per gross; 2*l.* 5*s.* 6*d.* total cost.
41. Two fog bells, 300*l.*; machine, 150*l.*; erection, &c., 75*l.* Total cost, 525*l.*
42. From Mercantile Marine Fund. Revenue collected and paid as per Special Return No. 1.
43. 1852, quarter, 821*l.* 4*s.* 6*d.* 1858, quarter, 741*l.* 1*s.* 1*d.* Total for 1852, 3,284*l.* 18*s.*
44. 1852, 886*l.* 4*s.* 4*d.*, including cost of freight of stores from Dublin. 1858, 519*l.* 17*s.* 11*d.*, ditto.
45. None.
46. None.
47. None.
48. No complaints or representation as to the light being unnecessary or placed in an unsuitable position.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store close to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; none applied for.
56. Signal mast and flag. No night signals used. It is proposed to adopt a code of signals at some of the principal stations.
57. Keeper on watch relieved in the lighthouse at 12 o'clock, midnight. Keepers are changed from the station as changes from other lighthouses require and allow.

136.

DUNCANNON FORT.

South-east Coast of Ireland, East Side of Waterford Harbour.

Lat. $52^{\circ} 13' 13''$ N., Lon. $6^{\circ} 56' 7''$ W.

3. No local authority.
4. Two lights in same tower, 10 feet vertically apart. Fort lighthouse distant from Duncannon north lighthouse half a mile, bearing S.S.W. $\frac{3}{4}$ W. The fort light and north light serve as leading lights to guide over the bar.
5. Not ascertained, having been transferred from the Revenue Board.
6. Not ascertained.
7. To light east side of Waterford harbour within the bar, and to serve for guidance over the bar.
8. 1803.
9. Not ascertained, transferred by the Revenue Board to the Port of Dublin Corporation in 1810.
10. Harbour light.
11. Chiefly rubble masonry, solid wall.
12. No lightning conductor.
13. 25 feet.
14. 53 feet.
15. 8½ miles.
16. 11 miles.
17. 119° S.S.W. to S.W. by S. to seaward.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 3rd order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company.
25. Through dome of lantern.
26. No fog signals used; none applied for.
27. None.
28. 10 days.
29. Improvements, 700*l.*
30. Finished.
31. 150*l.*, estimated cost.
32. Not purchased, transferred from Revenue Board.
33. 1*l.* 13*s.* 5*d.*
34. Coated with paint once every year, 7*l.* 10*s.* Paints procured by contract; workmanship not by contract.
35. One keeper at 2*l.*, exceptional rate.
36. 175*l.*, estimated cost.
37. 1857, repairs, 2*l.* 8*s.* 10*d.*; cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 3*s.* 8*d.* 1858, cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 3*s.* 8*d.*
38. 1857, oil, 170 gallons; wicks, 4 gross. 1858, oil, 170 gallons; wicks, 4 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross, 14*s.* total cost, 1858, 3*s.* 6*d.* per gross, 14*s.* total cost.
41. None.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 119*l.* 13*s.* 8*d.* 1858, quarter, 30*l.* 0*s.* 5*d.* Total for 1852, 478*l.* 14*s.* 6*d.*
44. 1857, 168*l.* 16*s.* 8*d.* (including cost of freight of stores from Dublin.) 1858, 76*l.* 3*s.* 1*d.*, ditto.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in lighthouse building.
54. None in 1858.
55. No night signals used; none applied for.
56. No night signals used; none found requisite.
57. One keeper.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

137.

DUNCANNON, NORTH.

South-east Coast of Ireland, East Side of
Waterford Harbour.

Lat. 52° 13' 13" N., Lon. 6° 56' W.

3. No local authority.
4. One light distant from the Duncannon Fort light half a mile, bearing N.N.E. $\frac{3}{4}$ E.
5. 1882.
6. Waterford Harbour Commissioners.
7. To form with the Duncannon Fort Lighthouse leading lights to guide over Duncannon Bar.
8. 1838.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation. The tower and dwellings built by contract by Mr. Legge, of Duncannon.
10. Harbour light.
11. Cut stone tower; stone walling; tower circular, coloured white externally.
12. No separate external conductor. Usual arrangement of wrought-iron handrail.
13. 35 feet.
14. 128 feet.
15. 13 miles.
16. 17 miles.
17. 2° S.W. $\frac{1}{2}$ S. to S. S. W. $\frac{1}{2}$ S.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 3rd order.
23. No alteration in general character of the illuminating apparatus. Burners adapted for use of rapeseed oil.
24. Parabolic reflectors from Soho Plate Co. Wrought-iron frame by workmen of the Corporation.
25. Usual arrangement of other catoptric lights through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None used; none applied for.
27. None.
28. 10 days.
29. 4,945*l.* 12*s.* 10*d.*, including cost of lantern, lighting apparatus, &c., with cost of arched platform, embankment, roadways, &c.
30. Finished.
31. Lantern sash, 7 feet 6 inches diameter, 4 feet high; *l.*
32. Not purchased; erected by Corporation.
33. No repairs of buildings requisite during five years ending 1858.
34. Coated with paint once every year, 15*l.* 19*s.* 6*d.* Paints procured by contract; workmanship not by contract.
35. One keeper at 46*l.* 3*s.*
36. 210*l.*
37. 1857, repairs, 2*l.* 16*s.* 8*d.*; cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 3*s.* 8*d.* 1858, cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 3*s.* 8*d.*
38. 1857, oil, 170 gallons; wicks, 4 gross. 1858, oil, 170 gallons; wicks, 4 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wick. 1857, 3*s.* 6*d.* per gross; 14*s.* total cost. 1858, 3*s.* 6*d.* per gross; 14*s.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.

44. 1852, 203*l.* 6*s.*, including cost of freight of stores from Dublin. 1858, 123*l.* 13*s.* 10*d.*, ditto.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Port of Dublin Corporation.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store close to the lighthouse.
54. None in 1858.
55. No tide signals used; none applied for.
56. Signal mast and flag. No night signals used.
57. One keeper. Keeper changed from the station as changes from other lighthouses require and allow.

138.

DUNMORE.

South-east Coast of Ireland, on Dunmore
Pierhead, West Side of Waterford Har-
bour.

Lat. 52° 9' N., Lon. 6° 59' 50" W.

3. No local authority.
4. One light.
5. Proposed in plan for Dunmore pier and harbour, constructed for accommodation of the mail steam packet post office service.
6. Determined on by Government.
7. Light necessary on the pierhead to guide vessels to and from the harbour.
8. 1826.
9. Designed by the late Alexander Nimmo, C.E., the engineer of the harbour, under whose direction the tower was built.
10. Harbour light.
11. Solid cut stone tower or column on pierhead.
12. No separate external conductor.
13. 51 feet.
14. 44 feet.
15. 7½ miles.
16. — miles (red light not visible to distance of sea horizon, unless in very clear weather).
17. 84° S. by E. $\frac{1}{2}$ E. to E. by N.
18. Fixed. Light coloured red to seaward; shown of natural appearance, white, to harbour.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 3rd order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from Soho Plate Company (Boulton and Watt).
25. Through dome of lantern.
26. None used; none applied for.
27. None.
28. 16 days.
29. Improvements, 500*l.*
30. Finished.
31. Not ascertained, transferred by Government.
32. Not purchased, transferred by Government.
33. 22*l.* 13*s.* 1*d.* (including cost of special repairs of base and floor of pier, not of lighthouse tower).
34. Coated with paint once every year, 15*l.* 13*s.* 8*d.* Paints procured by contract; workmanship not by contract.
35. One keeper at 64*l.* 12*s.* 4*d.*
36. 210*l.* total.
37. 1857, repairs, 2*l.* 5*s.* 8*d.*; cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 1*s.* 8*d.* 1858, cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 1*s.* 8*d.*
38. 1857, oil, 149 gallons; wicks, 3 gross. 1858, oil, 161 gallons; wicks, 8 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wick. 1857, 3*s.* 6*d.* per gross, 10*s.* 6*d.* total cost. 1858, 3*s.* 6*d.* per gross, 10*s.* 6*d.* total cost.
41. None used.
42. From Mercantile Marine Fund.
43. No light dues charged.
44. 1852, 178*l.* 17*s.* 6*d.* (including freight of oil and stores from Dublin.) 1858, 156*l.* 11*s.* 10*d.*, ditto.
45. None.
46. None.
47. None.
48. No representation or complaint.
49. None.
50. By Committee of Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store adjoining the lighthouse.
54. None in 1858.
55. None used or applied for.
56. Signal mast and flag. No night signals used; none found requisite.
57. One keeper. Relieved from the station as changes from other lighthouses require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

139.

DUNGARVAN.

South Coast of Ireland, Ballinacourty Point, County of Waterford.

Lat. 52° 4' 27" N., Lon. 7° 39' 5" W.

3. No local authority.
4. One light.
5. 1848.
6. Merchants of Dungarvan.
7. Best general position to guide past outer rocks, and to serve as inner harbour light.
8. 1858.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation. Erected by the workmen of the Corporation, and not by contract.
10. Harbour light.
11. Circular stone tower of limestone, solid walls.
12. No outer lightning conductor. Usual arrangement of capping of iron handrail, forming continuous conductor from lantern dome to bottom of tower.
13. 44 feet.
14. 52 feet.
15. 8½ miles.
16. 10 miles.
17. (239°.) L. to N.W. ¼ N.
18. Fixed. Light is coloured red in direction of Carrickapane Rock, green in direction of rocks off Ballinacourty Point, and of natural appearance, white in all other directions in which it is visible.
19. Fixed.
20. During every night from sunset to sunrise.
21. Dioptric.
22. 3rd order.
23. No alteration since lighted. None suggested, the light serving well the designed purpose.
24. Mr. Wilkins, of London.
25. Ventilating tube continued through centre of dome.
26. None.
27. None.
28. None.
29. 6,737l. 6s., including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 10 feet diameter, 6 feet high; 566l. (including cut stone blocking.)
32. Not purchased, built by the Port of Dublin Corporation.
33. Not lighted until 1858.
34. Coated with paint once in each year. 96l. 10s. in 1858. Paints procured by contract. Workmanship not by contract.
35. One keeper at 46l. 3s.
36. 366l. 5s., 107l. 14s. 10d.; total, 473l. 19s. 10d.
37. Not lighted until 1858.
38. Not lighted ditto.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon. 1858, 3s. 5d. per gallon.
40. 1858, cotton concentric wick. Not lighted until 1858.
41. None.
42. From Mercantile Marine Fund. Revenue is collected and paid as per statement in Special Return No. 1.
43. Not lighted until 1858, quarter, 1l. 0s. 2d.
44. Not lighted ditto.
45. None.
46. None.
47. None.
48. No complaints or representation made.
49. No complaint or representation made as to efficiency of the light.
50. By Committee of the Corporation and by the Superintendent of Lighthouses.
51. Station inspected on circuit in 1857, by superintendent in 1858.
52. Not known to have been extinguished during night since first established.
53. At least two spare burners always kept ready. Oil stored in oil store adjoining dwelling and close to lighthouse.
54. None in 1858.
55. No tide signals used. There has not been any application or requisition to have tide signals used at the station.
56. Signal mast and flag. No night signals.
57. One keeper. Keepers are changed from the station as required by changes at other lighthouses.

140.

MINEHEAD.

South Coast of Ireland, County of Waterford.

Lat. 51° 59' 33" N., Lon. 7° 35' 8" W.

3. The Port of Dublin Corporation have not any formally appointed local agents paid, as such correspondence is held directly with the lightkeepers.
4. One light only.
5. 1848.
6. Cork Harbour Commissioners, position previously suggested by Inspector of Lighthouses.
7. Previously to the erection of Minehead and Ballycotton lights, the coast between Cork light and the Hook Tower light was without lights; these were selected as the most judicious points for intervening coast lights. Minehead also marks approach to Dungarvan Bay.
8. 1st June 1851.
9. Walling of tower and dwelling built by contract, from the design and under the direction of Mr. Halpin, Engineer to the Port of Dublin Corporation. Contractor, Mr. W. Raleigh.
10. Sea light.
11. Tower, solid masonry without a separate inner wall, coated inside with cement. Tower, light grey stone colour.
12. General arrangement of connexion of metal inclosure plate of lightroom with the handrail of tower.
13. 68 feet.
14. 285 feet.
15. 19 miles.
16. 23 miles.
17. 209° N.E. by E. ¼ E. to W. ¼ S.
18. Intermittent.
19. Light visible during 50 seconds, and eclipsed during 10 seconds. The arrangement to produce eclipses of this light designed by the Engineer of the Port of Dublin Corporation.
20. During whole night, from sunset to sunrise.
21. Dioptric, fitted with catadioptric zones above and below the main refracting bell.
22. 1st order, one concentric wick lamp lighted.
23. No alteration in description or character of illuminating apparatus since first lighted.
24. Wilkins, of London, maker of the dioptric apparatus; McMaster, of Dublin, made the machine.
25. Central tube through dome of lantern.
26. No fog signals, none having been considered necessary in this position.
27. None.
28. 28 days.
29. 9,790l. 19s. 7d., including cost of lantern, light apparatus, &c.
30. All buildings essentially requisite are completed.
31. Lantern sash 13 feet diameter, 10 feet high, 825l. (including stone blocking.)
32. Lighthouse was not purchased; was built by Port of Dublin Corporation.
33. 2l. 1s. 8d.
34. General coating of paint once in each year, 34l. 5s. Paints procured by contract. Workmanship not by contract.
35. One keeper at 64l. 12s. 4d. per annum. One ditto at 46l. 3s. per annum.
36. 1,574l. 17s. 4d.; 144l. 10s. 3d.; 129l.—Total, 1,847l. 7s. 7d.
37. 1857, repairs, 32l. 13s. 8d.; cylinders, 4l. 4s.; cleaning stores, 7l. 8s. 4d. 1858, repairs, 32l. 12s. 11d.; cylinders, 4l. 4s.; cleaning stores, 2l. 7s. 4d.
38. 1857, oil, 474 gallons; wicks, 33 gross. 1858, oil, 487 gallons; wicks, 33 gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon; 1858, 3s. 5d. ditto.
40. Cotton concentric wick. 1857, 2l. 5s. total cost. 1858, 2l. 5s. total cost.
41. No fog signal apparatus.
42. Light is maintained from the Mercantile Marine Fund. Revenue is collected and paid as per statement in Special Return No. 1.
43. 1858, quarter, 742l. 3s. 7d.; 1858, quarter, 636l. 13s. 11d. Total for 1852-2,908l. 14s. 6d.
44. 1858, 392l. 4s. 2d. (including freight of stores). 1858, 395l. 13s. 9d. ditto.
45. None.
46. None.
47. None.
48. No complaints made as to the light being unnecessary or placed in an unsuitable position since lighted.
49. No complaints or representation as to the efficiency of light since lighted.
50. Committee of Board and by Superintendent of Lighthouses.
51. On circuit of inspection in 1857. Ditto, 1858.
52. Not known to have been extinguished during night since lighted.
53. At least two lamp burners are kept ready. Oil kept in oil store adjoining principal keeper's dwelling, there being some positive advantages in having it kept there.
54. Barometer and thermometer.
55. Tide signals not used at this station, not considered necessary.
56. Mast and flag.
57. Relieved from watch in lightroom at 12 o'clock at midnight changed from station according as changes from other stations require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

141.

YOUGHAL.

South-east Coast of Ireland, West Side of Entrance to Youghal Harbour, County Cork.

Lat. 51° 56' 34" N., Lon. 7° 50' 34" W

3. No local authority.
4. Only one light.
5. March 1848.
6. Suggested by Port of Dublin Corporation.
7. As the most eligible position for a harbour light.
8. February 1852.
9. Designed by George Halpin, Engineer to the Port of Dublin Corporation, and built under his supervision by workmen of the Corporation.
10. Harbour light.
11. Cut stone; solid wall; circular tower, with projecting gallery.
12. No external conductor. Usual arrangement of iron handrail to form continuous conductor from lantern to base of tower.
13. 43 feet.
14. 78 feet.
15. 10 miles.
16. 12 miles.
17. N. $\frac{1}{2}$ E. to S.W. by S.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Dioptric.
22. 3rd order.
23. No alteration in illuminating apparatus since 1845.
24. Wilkins, of London.
25. Ventilating tube through centre of dome, also ventilators through blocking and floor of lantern to regulate supply of air.
26. No fog signals at this station; none applied for.
27. None.
28. 12 days.
29. 4,679*l.* 6*s.* 5*d.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash, diameter, 6 feet high. Total, 467*l.* (including cut stone blocking).
32. Not purchased; erected by Port of Dublin Corporation.
33. 1*l.* 12*s.* 2*d.*
34. Coated once each year, 22*l.* 4*s.* 10*d.* Paints procured by contract; workmanship not by contract.
35. One keeper at 46*l.* 3*s.*
36. 398*l.* 6*s.* 8*d.*; 10*l.* Total, 502*l.*
37. 1857, cylinders, 3*l.* 10*s.*; cleaning stores, 1*l.* 3*s.* 8*d.* 1858, repairs, 1*l.* 16*s.* 6*d.*; cylinders, 3*l.* 10*s.*; cleaning stores, 1*l.* 3*s.* 8*d.*
38. 1857, oil, 318 gallons. 1858, oil, 305 gallons.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Cotton concentric wick. 1857, 1*l.* 17*s.* 6*d.* total cost. 1858, 1*l.* 17*s.* 6*d.* total cost.
41. No fog signal apparatus at this station.
42. From Mercantile Marine Fund. Revenue is collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 21*l.* 2*s.* 8*d.* 1858, quarter, 4*l.* 3*s.* 10*d.* Total for 1852, 84*l.* 10*s.* 10*d.*
44. 1852, nil. 1858, 17*l.* 11*s.* 6*d.* (including cost of freight of stores, &c.)
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. At least two spare burners kept in readiness.
54. None in 1858.
55. No tide signals used at this station; none applied for.
56. No night signals used. Signal mast and flag.
57. One keeper. Keeper changed from the stations as required by changes at other stations.

142.

BALLYCOTTIN ISLAND.

South Coast of Ireland, summit of Ballycotton Island, County of Cork.

Lat. 51° 49' 30" N., Lon. 7° 59' W.

3. The Port of Dublin Corporation have not any formally appointed local agents paid as such.
4. One light only.
5. 1848.
6. Cork Harbour Commissioners.
7. Its general position on the coast, as serving with the light on Alinehead to light a range of coast.
8. 1st June 1851.
9. Tower and dwellings built by contract from the plans and specification, and under the superintendence of Mr. Halpin, Engineer to Port of Dublin Corporation. Contractors, Messrs. Brash, of Cork.
10. Sea light.
11. Solid masonry, of stone of the vicinity, coated inside with cement plaster.
12. Iron handrail of tower connected with metal inclosure plate of lightroom.
13. 50 feet.
14. 195 feet.
15. 16 sea miles.
16. 20 sea miles.
17. 191° E. $\frac{1}{2}$ N. to W. $\frac{1}{2}$ N.
18. Flashing.
19. Flash once in every 10 seconds.
20. From sunset to sunrise (every night.)
21. Dioptric vertical reflectors are moved in front of the upper and lower catadioptric zones simultaneously with the polygonal lenses; from this arrangement a powerful flash is produced.
22. 1st order, one concentric wick burner.
23. No alteration in character of illuminating apparatus.
24. Wilkins, of London.
25. Tube through dome of lantern.
26. Large fog bell rung by machinery.
27. 55 days.
28. 55 days.
29. 11,746*l.* 15*s.* 5*d.*, including cost of lantern, light apparatus, inclosure approach, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 10 feet high, 839*l.* (including stone blocking.)
32. Not purchased, but built by Port of Dublin Corporation.
33. 4*l.* 10*s.* 10*d.*
34. Paint coated once in each year, 52*l.* 13*s.* 4*d.* Paints procured by contract. Workmanship not by contract.
35. Two keepers, one at 64*l.* 12*s.* 4*d.*, one at 46*l.* 3*s.*; watchman attending bell, 36*l.* 10*s.*
36. 2,838*l.* 12*s.* 7*d.*; 259*l.* 13*s.* 3*d.*
37. 1857, cylinders, 4*l.* 4*s.*; cleaning stores, 2*l.* 7*s.* 4*d.* 1858, repairs, 4*l.* 1*s.* 4*d.*; cylinders, 4*l.* 4*s.*; cleaning stores, 2*l.* 7*s.* 4*d.*
38. 1857, oil, 316 gallons; wicks, 94 gross. 1858, oil, 354 gallons; wicks, 34 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon; 1858, 3*s.* 5*d.* per gallon.
40. Cotton concentric wicks. 1857, 2*l.* 5*s.* total cost. 1858, 2*l.* 5*s.* total cost.
41. Bell, 229*l.*; machine, 170*l.*; bellry, 357*l.* Total, 756*l.*
42. From Mercantile Marine Fund. Revenue is collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 710*l.* 4*s.* 1*d.*; 1858, quarter, 646*l.* 1*s.* Total for 1852, 2,840*l.* 16*s.* 4*d.*
44. 1852, nil. 1858, 436*l.* 5*s.* 9*d.* (including boat attendance and freight of stores.)
45. None.
46. None.
47. None.
48. No complaint or representation as to the light being unnecessary or placed in an unsuitable position.
49. No complaint or representation received as to the efficiency of the light.
50. By Committee of the Board and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto in 1858.
52. Light not extinguished, but representation having been made that it did not resolve on the morning of 5th Nov. 1857, and examination made and facts sworn to, the principal keeper was dismissed from the lighthouse service.
53. At least two spare burners kept in readiness. Oil stored in oil store adjoining principal keeper's dwelling and close to the lighthouse.
54. Barometer and thermometer.
55. Tide signals not used, this lighthouse not being in vicinity of or at entrance of any navigation dependent on the state of the tide.
56. Exhibition of flag by day requires the attendance of boat, but from closeness of island to the shore, and from frequency of boat attendance, it is seldom requisite to hoist flag.
57. The keepers remain at this station until transferred to another, their families residing on the island; changes become necessary chiefly in order that keepers at remote island stations may not be continued there too long.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

143.

CORK.

South Coast of Ireland, on Roches Point, East Side of Entrance of Cork Harbour.

Lat. 51° 47' 33" N., Lon. 8° 15' 14" W.

3. No local authority.
4. One light.
5. 1815.
6. Merchants of Cork.
7. To serve as a sea light (previously to erection of the Ballycotton light), to guide from seaward to Cork Harbour and light its entrance.
8. 1817.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation. Built under his direction by the workmen of the Corporation; not by contract.
10. Sea light.
11. Cut stone; solid walling. The tower is of circular form, coloured white, and having the residence extending from it laterally.
12. No external lightning conductor. Wrought iron handrail forms continuous conductor from lantern to base of tower.
13. 49 feet.
14. 92 feet.
15. 11 miles.
16. — miles. Red light not seen to sea horizon, unless in very clear weather.
17. 237° N. by E. to S.E.
18. Fixed. Light is coloured red to seaward, and is of the natural appearance, white, towards the harbour.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil. Ruby cylinders substituted for red discs, at suggestion of the engineer of the Corporation.
24. Reflectors from the Soho Plate Company.
25. Same as in the other catoptric lights, through dome of lantern. There are also ventilators in the blocking and floor of light-room to regulate the supply of air. Improvement of the apparatus is under consideration.
26. None.
27. None.
28. 19 days.
29. 6,000*l.* (present lighthouse), including cost of lantern, light apparatus, &c.
30. Finished.
31. 1,030*l.* (including cut stone blocking).
32. Not purchased; erected by Corporation.
33. 10*l.* 2*s.* 9*d.*
34. Coated with paint once every year, 15*l.* 18*s.* 1*d.* Paints procured by contract; workmanship not by contract.
35. One keeper at 6*l.* 12*s.* 4*d.*
36. 76*5*l.**; 75*l.* Total, 840*l.*
37. 1857, repairs, 20*l.* 5*s.* 5*d.*; cylinders, 5*l.* 8*s.*; cleaning stores, 1*l.* 13*s.* 6*d.* 1858, repairs, nil. (nor in 1855 or 1856); cylinders, 5*l.* 8*s.*; cleaning stores, 1*l.* 13*s.* 6*d.*
38. 1857, oil, 732 gallons; wicks, 11 gross. 1858, oil, 726 gallons; wicks, 11 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 1*l.* 18*s.* 6*d.* total cost. 1858, 3*s.* 6*d.* per gross; 1*l.* 18*s.* 6*d.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 689*l.* 4*s.* 2*d.* 1858, quarter, 671*l.* 5*s.* 9*d.* Total for 1852, 2,756*l.* 16*s.* 10*d.*
44. 1852, 211*l.* 15*s.* 9*d.* (including boat attendance, freight of stores, &c.) 1858, 267*l.* 18*s.* 8*d.*, ditto.
45. None.
46. None.
47. None.
48. No representation or complaint as to the position.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burners kept ready. Oil stored in oil store close to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; none applied for.
56. Signal mast and flag.
57. One keeper. Keeper removed from the station when changes from other lighthouses render it necessary.

144.

SPIT BANK.

Cork Harbour, off North-east Point of the Spit Bank.

Lat. 51° 50' 41" N., Lon. 8° 16' 26" W.

3. No separate agent or local authority, the lightkeeper transacting all the business of the station under instruction.
4. One light.
5. 1848.
6. Cork Harbour Commissioners.
7. As marking north-east projecting point of the Spit bank and angle or bend in the channel, where sailing course to Queenstown is altered.
8. 1853.
9. Engineer, George Halpin, Engineer to the Port of Dublin Corporation. The screw piles and keeper's dwelling were built under contract by Mr. Mitchell, patentee of the screw piles; the lantern was erected by workmen of the Corporation.
10. Harbour light.
11. Octagonal sheet iron house, borne on 9 wrought piles, coloured red, at once recognized by the peculiar open appearance of the screw piles, which are placed apart in the angles and centre of octagon.
12. The whole building forms a large continuous conductor; the lantern metal; the dwelling of sheet iron, bearing on wrought iron piles set in the water, the depth at low water being over two fathoms.
13. 75 feet. 75 feet from base screws to vane height; from surface of sand to vane varies as the sands shift.
14. 32 feet.
15. 6 miles.
16. 8 miles.
17. 270° S.S.W. ½ W. to N.W. by W. ½ W.
18. Fixed red light.
19. Fixed.
20. During every night from sunset to sunrise.
21. Dioptric.
22. 4th order.
23. Light strengthened in 1860 at suggestion of Cork Harbour Commissioners; character of light the same.
24. Chance, of Birmingham.
25. Ventilating tube through centre of dome.
26. None.
27. None.
28. Register not satisfactory.
29. 6,412*l.* 9*s.* 3*d.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. 136*l.* 9*s.* 10*d.*
32. Was not purchased, but built by the Port of Dublin Corporation.
33. None.
34. General coating of paint once a year, 41*l.* 13*s.* Paints procured by contract; workmanship not by contract.
35. One keeper, 6*l.* 12*s.* 4*d.*; one helper, 30*l.* 10*s.*
36. 135*l.*; 25*l.* Total, 160*l.*
37. 1857, cylinders, 18*s.*; cleaning stores, 19*s.* 8*d.* 1858, repairs, 2*l.* 7*s.*; cylinders, 18*s.*; cleaning stores, 19*s.* 8*d.*
38. 1857, oil, 60 gallons; wicks, 2 gross. 1858, oil, 60 gallons; wicks, 2 gross. Larger apparatus fitted up in 1860 will cause increased consumption of oil and wicks.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Cotton concentric wick. 1857, 8*s.* total cost. 1858, 8*s.* total cost.
41. No fog signal apparatus.
42. Light maintained from the Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. Not lighted in 1852. For quarter 1858, 65*l.* 2*s.* 2*d.*
44. 1852, nil. 1858, 205*l.* 16*s.* 11*d.* (including cost of boat attendance, freight of stores, &c.)
45. None.
46. None.
47. None.
48. There have not been any complaints that the light is unnecessary or placed in an unsuitable position.
49. The Cork Harbour Commissioners having suggested that the strength of the light should be increased, the Port of Dublin Corporation having obtained the sanction of the Board of Trade, had a higher order of apparatus placed.
50. By Committee of the Port of Dublin Corporation and by Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. The light has not been known to have been extinguished since first established.
53. There is a spare lamp and two spare burners kept in readiness. The oil stored in a room under the lightroom.
54. None in 1858.
55. No tide signals are used; Cork Harbour being a deep water harbour navigable at low water by large ships beyond the range of this light, there has not been any requisition to have tide signals shown.
56. From proximity to shore and to Queenstown no formal code of signals used.
57. Keeper on watch relieved in lightroom at 12 o'clock midnight.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

145.

CHARLES FORT.

South Coast of Ireland, in Charles Fort,
Kinsale Harbour.

Lat. 51° 41' 48" N., Lon. 8° 29' 50" W.

3. No local authority.
4. One light.
5. Not ascertained.
6. Not ascertained.
7. To light Kinsale Harbour channel.
8. 1804.
9. The engineer and builder of the fort. The light was transferred to the Port of Dublin Corporation by the Revenue Board in 1810.
10. Harbour light.
11. Hammered masonry and brick work. Rooms in the barrack facing harbour appropriated for lightroom and for keeper.
12. No lightning conductor.
13. 48 feet.
14. 98 feet.
15. 1½ miles.
16. 14 miles.
17. 12° S.S.W. ¼ W. to S.W. ¼ S.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 3rd order.
23. No alteration in the general character of the illuminating apparatus; burners adapting for use of rapeseed oil.
24. Reflectors from the Soho Plate Co.
25. Through covering over lantern sash.
26. None used; none applied for.
27. None.
28. None.
29. Improvements, 500*l*.
30. Finished.
31. 75*l*., estimated cost.
32. Not purchased, transferred from Revenue Board.
33. 7*s*. 6*d*.
34. Coated with paint once in every year. 4*l*. 3*s*. Paints procured by contract; workmanship not by contract.
35. One keeper at 21*l*., exceptional rate.
36. 170*l*. estimated cost.
37. 1857, cylinders, 1*l*. 16*s*.; cleaning stores, 1*s*. 10*d*. 1858, repairs, 7*l*. 11*s*. 8*d*.; cylinders, 1*l*. 16*s*.; cleaning stores, 1*s*. 10*d*.
38. 1857, oil, 150 gallons; wicks, 4 gross. 1858, oil, 146 gallons; wicks, 4 gross.
39. Pale rapeseed oil. 1857, 4*s*. 2½*d*. per gallon. 1858, 3*s*. 5*d*. per gallon.
40. Argand cotton wicks. 1857, 3*s*. 6*d*. per gross; 14*s*. total cost. 1858, 3*s*. 6*d*. per gross; 14*s*. total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 29*l*. 1*s*. 4*d*. 1858, quarter, 8*s*. 10*d*. Total for 1852, 11*l*. 5*s*. 6*d*.
44. 1852, 190*l*. 5*s*. 3*d*., including cost of freight of stores from Dublin. 1858, 83*l*. 1*s*. 8*d*., ditto.
45. None.
46. None.
47. None.
48. No representation or complaint.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil store adjoining lightroom.
54. None in 1858.
55. No tide signals used or applied for.
56. No night signals used; none found requisite.
57. One keeper.

146.

KINSALE.

South Coast of Ireland, on South Point of
Old Head.

Lat. 51° 36' 11" N., Lon. 8° 31' 58" W.

3. No local authority.
4. One light.
5. See No. 6 (following No.)
6. Old light transferred from the Revenue Board in 1810.
7. As being the best position for a sea light on that part of the coast between the Fastnet Rock and Co'k Harbour; it is on the outer point of a very prominent headland, and serves also to guide to the entrance of Kinsale Harbour.
8. 1853, date of first exhibition of present light on South Point. Old light farther inland (now discontinued) was established in 1855.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation. Buildings were erected by the workmen of the Corporation, and not by contract.
10. Sea light.
11. Stone tower, solid wall, coated with cement. Painted white with two red belts.
12. Usual arrangement of wrought-iron handrail to form continuous conductor from lantern to base of tower. No separate external conductor.
13. 10½ feet.
14. 236 feet.
15. 18 miles.
16. 22 miles.
17. 20° N.E. ¼ N. to N.W. by N.
18. Fixed, white to seaward; red in direction of the Horse Rock in Courtmaesherry Bay.
19. Fixed.
20. During every night from sunset to sunrise.
21. Dioptric.
22. 1st order.
23. Light extended into Courtmaesherry Bay, by direction of the Board of Trade, in 1855.
24. Wilkins of London.
25. Ventilating tube through centre of dome; there are minor ventilators through floor and through blocking of lightroom, to regulate supply of air.
26. No fog signals at this station.
27. None.
28. None. (Register not satisfactory.)
29. 10.594*l*., including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 10 feet high; 744*l*. (including stone blocking.)
32. Present lighthouse was erected by the Port of Dublin Corporation, and was not purchased.
33. 1*l*. 16*s*. 2*d*.
34. Coated with paint once in each year. Average, 45*l*. 11*s*. 6*d*., reduced to 34*l*. Paints procured by contract. Workmanship not by contract.
35. Two keepers' one at 64*l*. 12*s*. 4*d*., one at 46*l*. 3*s*.
36. 1,302*l*. 11*s*. 2*d*.; 1,291, 19*s*. 4*d*.
37. 1857, cylinders, 4*l*. 4*s*.; cleaning stores, 2*l*. 7*s*. 4*d*. 1858, cylinders, 4*l*. 4*s*.; cleaning stores, 2*l*. 7*s*. 4*d*.
38. 1857, oil, 583 gallons; wicks, 3½ gross. 1858, oil, 562 gallons; wicks, 3½ gross.
39. Pale rapeseed oil. 1857, 4*s*. 2½*d*. per gallon. 1858, 3*s*. 5*d*. per gallon.
40. 1857, 2*l*. 5*s*. total cost; 1858, 2*l*. 5*s*. total cost.
41. No fog signal apparatus.
42. Light is maintained from the Mercantile Marine Fund. Revenue is collected and paid as per statement in Special Return No. 1.
43. For quarter, 1852, 697*l*. 2*s*. 10*d*.. Ditto, 1858, 675*l*. 17*s*. 4*d*..—Total for 1852, 2,788*l*. 11*s*. 4*d*.
44. 1852, 615*l*. 6*s*. 3*d*., (including freight of stores.) 1858, 547*l*. 2*s*. 5*d*. ditto.
45. None.
46. None.
47. None.
48. There have not been any complaints that the present light is unnecessary or placed in an unsuitable position.
49. There have not been any complaints as to the efficiency of the light. As first exhibited, the light was shown to entrance of Courtmaesherry Bay, and in 1855 was, by direction of the Board of Trade, opened farther landward, so as to be visible within that bay.
50. By Committee of the Board of the Port of Dublin Corporation and by Superintendent of Lighthouses.
51. On circuit of inspection in 1857. Ditto in 1858.
52. Not known to have been extinguished.
53. At least two spare burners kept in readiness. Oil stored in oil store near to lighthouse.
54. Barometer and thermometer.
55. No tide signals.
56. Signal mast and flag.
57. Keeper on watch relieved in lightroom at 12 o'clock each night; keepers are changed from the station as changes from the other stations require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

147.

FASTNET ROCK.

Summit of Fastnet Rock, off S.W. Coast of Cork.

Lat. 51° 20' 18" N., Long. 9° 36' 25" W.

3. The Port of Dublin Corporation have not any formally appointed local agents paid as such.
4. One light only.
5. 1847.
6. Cork Harbour Commissioners and others.
7. To form a substitute for the Cape Clear light, being four miles farther to the westward and southward, and less liable to be obscured by fogs.
8. 1st January 1854.
9. Built from the designs and under the direction of Mr. George Halpin, Engineer to Port of Dublin Corporation. The metal casing of the tower was procured by contract from Messrs. Mallet, of Dublin. The rock cutting and erection altogether by workmen of the Corporation.
10. Sea light (1st class).
11. Outer casing of tower of cast iron, filled with masonry for first store; remainder of tower lined with brickwork; tower marked by one horizontal red belt.
12. The metal tower serves as a large conductor.
13. 92 feet.
14. 148 feet.
15. 15 miles.
16. 19 miles.
17. 5007. Whole circle lighted.
18. Apparatus revolving light of the natural appearance or colour.
19. Brightest appearance of flash once every two minutes, gradually increasing and diminishing in strength, and at short distances, not totally obscured between the flashes.
20. During every night from sunset to sunrise.
21. Dioptric; upper and lower portions fitted with catadioptric zones.
22. 1st order; one large concentric wick burner lighted.
23. No alteration of apparatus since first lighted.
24. Wilkins, of London.
25. Ventilating tube through centre of dome of lantern.
26. None as yet; it is proposed to have a large fog bell erected, to be worked by machinery.
27. None.
28. 28 days.
29. Cost of lighthouse on the rock, 18,047*l.* 15*s.* 11*d.*, including cost of lantern, light apparatus, &c.
30. Buildings essentially necessary on rock completed.
31. 77*l.*
32. Not purchased; erected by Port of Dublin Corporation.
33. 1*l.* 8*s.*
34. General coating of paint once in each year, 57*l.* 15*s.* 5*d.* Paints procured by contract; workmanship not by contract.
35. Three keepers; two always on duty at the lighthouse. One at 64*l.* 12*s.* 4*d.*; two at 46*l.* 3*s.*; also two boatmen resident on the rock at 36*l.* 10*s.*
36. 2,036*l.* 19*s.* 10*d.*; 159*l.*
37. 1857, repairs, 8*l.* 3*s.* 10*d.*; cylinders, 4*l.* 4*s.*; cleaning stores, 2*l.* 5*s.* 4*d.* 1858, repairs, 1*l.* 6*s.*; cylinders, 4*l.* 4*s.*; cleaning stores, 2*l.* 5*s.* 4*d.*
38. 1857, oil, 412 gallons; wicks, 3*q.* gross. 1858, oil, 414 gallons; wicks, 3*q.* gross.
39. Pale rapeseed oil. 1857, 4*s.* 2*d.* per gallon; 1858, 3*s.* 5*d.* per gallon.
40. Cotton concentric wick. 1857, 2*l.* 5*s.* total cost. 1858, 2*l.* 5*s.* total cost.
41. None.
42. From Mercantile Marine Fund. Revenue is collected and paid as per statement in Special Return No. 1.
43. 1852, not lighted. Quarter, 1858, 686*l.* 9*s.* 10*d.*
44. 1852, nil. 1858, 777*l.* 4*s.* 1*d.* (including cost of attendance of decked hooker, freight of stores, &c.)
45. None.
46. None.
47. None.
48. No complaint or representation as to the light being unnecessary or placed in an unsuitable position.
49. No complaint or representation made as to the efficiency of the light.
50. By Committee of the Board and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished during night since first lighted.
53. At least two spare burners kept in readiness. Oil stored on rock in lower part of tower; remainder stored in store at Rock Island, Crookhaven.
54. Barometer and thermometer.
55. Tide signals are not used; the lighthouse not being in the vicinity of any harbour, channel, or navigation depending on state of the tide.
56. Means of summoning attending hooker by signal flag. It has been proposed to establish a code of signals during the present year. Owing to distance from shore, signals by night could rarely be made, and signals by day would seldom be visible, unless in clear weather.
57. One keeper, relieved from duty on the rock every fortnight, weather permitting. Keeper on watch relieved in lightroom at 12 o'clock, midnight. Keepers changed from the station as required by changes at other stations.

148.

CROOKHAVEN.

South Coast of Ireland, on Rock Island Point, at North Side of Entrance of Crookhaven, County Cork.

Lat. 51° 28' 35" N., Long. 9° 42' 29" W.

3. No local authority.
4. One light.
5. 1838.
6. Inhabitants of Crookhaven and the vicinity.
7. To guide to or from Crookhaven, and to light the entrance and passage up the harbour.
8. 1843.
9. Designed by the late George Halpin, Engineer to Port of Dublin Corporation.
10. Harbour light.
11. Cut stone; solid walls. Tower of circular form, coloured white.
12. No external conductor; wrought-iron handrail forms a continuous conductor from lantern to base of tower.
13. 45 feet.
14. 67 feet.
15. 9½ miles.
16. 13 miles.
17. 165° W. ½ N. to E. by S. ¼ S.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 3rd order.
23. Light coloured red on arc over the Alderman rock, at the suggestion of the Engineer of the Corporation. No other alteration in the general character of the illuminating apparatus. Burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company. Wrought-iron frame, &c. by the workmen of the Corporation.
25. Through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None.
27. None.
28. 37 days.
29. 9,151*l.* 7*s.*, including cost of lantern, light apparatus, &c., roads, ways, embankments, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high. 850*l.* (including cut stone blocking.)
32. Not purchased; erected by Corporation.
33. 5*l.* 8*s.* 1*d.*
34. Coated with paint once every year, 22*l.* 6*s.* Paints procured by contract; workmanship not by contract.
35. One keeper at 64*l.* 12*s.* 4*d.*
36. 382*l.* total cost.
37. 1857, cylinders, 3*l.* 12*s.*; cleaning stores, 1*l.* 1*s.* 8*d.* 1858, 5*l.* 12*s.* 10*d.*; cylinders, 3*l.* 12*s.*; cleaning stores, 1*l.* 1*s.* 8*d.*
38. 1857, oil, 310 gallons; wicks, 6 gross. 1858, oil, 322 gallons; wicks, 6 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 1*l.* 1*s.* total cost. 1858, 3*s.* 6*d.* per gross; 1*l.* 1*s.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, nil. 1858, nil.
44. 1852, 205*l.* 11*s.* 3*d.* (including cost of freight of stores from Dublin). 1858, 14*l.* 9*s.* 5*d.*, ditto.
45. None.
46. None.
47. None.
48. Representation of opinion have been made; the light should have been placed on the Alderman rock on south side of the entrance.
49. Representation having been made that the light did not form a sufficient guide past the Alderman rocks, the light has, with the sanction of the Board of Trade, been coloured red over an arc extending across these rocks.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store near to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used. No application made for their adoption.
56. Signal mast and flag. No night signals used.
57. One keeper. Keeper changed from the station as changes from other stations require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

149.

BEARHAVEN.

South-west Coast of Ireland, on Roanecarrig Island, Eastern Entrance to Bearhaven.

Lat. 51° 39' 10" N., Lon. 9° 44' 49" W.

3. No local authority.
4. One light.
5. 1838.
6. Coast Guard authorities.
7. As guide up Bantry Bay and within Bearhaven, and lighting the main or eastern entrance to Bearhaven.
8. 1847.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation; the walls of tower and dwelling built by contract by Mr. Howard, of Limerick; the lantern erected by workmen of the Corporation.
10. Harbour light.
11. Cut stone, silted walling, coated inside with cement; tower, circular, painted white with a red belt.
12. No separate external conductor. Usual arrangement of wrought-iron handrail of tower to form continuous conductor from lantern to base of tower.
13. 62 feet.
14. 55 feet.
15. 8½ miles.
16. 13 miles.
17. 196° E. by S. to W.N.W. ¼ N.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 2nd order.
23. No alteration in the general character or description of apparatus; burners adapted to use of rapeseed oil.
24. Reflectors from Soho Plate Co.; wrought-iron frame, &c., by workmen of the Corporation.
25. Through dome. There are also ventilating openings in blocking and floor of lightroom to regulate supply of air.
26. None used; none applied for.
27. None.
28. 12 days.
29. 14,308*l.*, 10*s.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high. 98*l.*, including cut stone blocking.
32. Not purchased; erected by Corporation.
33. 12*l.* 10*s.* 6*d.*; the repairs during these five years included some work not of usual occurrence.
34. Coated with paint once every year, 55*l.* 8*s.* 4*d.* Paints procured by contract; workmanship not by contract.
35. Two keepers; one at 64*l.* 12*s.* 4*d.*; one at 46*l.* 3*s.*
36. 710*l.* total cost.
37. 1857, cylinders, 5*l.* 8*s.*; cleaning stores, 2*l.* 3*s.* 4*d.* 1858, repairs, 1*l.* 1*s.* 9*d.*; cylinders, 5*l.* 8*s.*; cleaning stores, 2*l.* 3*s.* 4*d.*
38. 1857, oil, 641 gallons; wicks, 10 gross. 1858, oil, 631 gallons; wicks, 10 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wick. 1857, 3*s.* 6*d.* per gross; 1*l.* 15*s.* total cost. 1858, 3*s.* 6*d.* per gross, 1*l.* 15*s.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, nil; total for 1852, nil. 1858, quarter, 1*l.* 0*s.* 2*d.*
44. 1852, 401*l.* 12*s.* 8*d.*, including freight of stores, boat attendance, &c. 1858, 384*l.* 3*s.* 5*d.*, ditto.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished; the ordinary catoptric lamp not liable to any accident which would cause its extinction.
53. Spare lamp and burner kept ready. Oil stored in oil store adjoining the lighthouse.
54. Barometer and thermometer.
55. Tide signals are not used; there has not been any application for them, Bearhaven being a deep water harbour.
56. Signal mast and flag; no means of communicating signals by night.
57. Keeper on watch relieved in lighthouse at 12 o'clock, midnight. Keepers are relieved from the station as removals from other lighthouses allow.

150.

SKELLIGS, LOWER.

West Coast of Ireland, on the Great Skelligs Rock off West Coast, Co. Kerry.

Lat. and Lon. See Special Return for Skelligs Upper Lighthouse.

3. No local authority.
4. There are two lights on the Great Skelligs Rock; the Lower Light is distant from the Upper Light 260 yards, bearing S. by E.
5. 1820.
6. The Knight of Kerry (Maurice Fitzgerald) and others.
7. A sea light being requisite off the south-west coast of Ireland, previously unlighted, the Skelligs Rocks were considered the best general position.
8. 1826.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, not by contract.
10. Sea light.
11. Cut stone; solid walling; tower is of circular form, painted white.
12. No separate external conductor. Wrought-iron handrail forms a continuous conductor from lantern to base of tower.
13. 46 feet.
14. 175 feet.
15. 15½ miles.
16. 19 miles.
17. 236° N. by W. to E.S.E.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Cat. ptic.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company.
25. Through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None used.
27. None.
28. 38 days.
29. 22,000*l.*, including cost of lantern, light apparatus, &c. Large portion of outlay in rock cutting to form platform for sites of lighthouse and dwellings; roadways cut from incline of solid rock.
30. Finished.
31. Lantern sash, 13 feet diameter, 8 feet high. 950*l.* (including cut stone blocking).
32. Not purchased; erected by Corporation.
33. 1*l.* 15*s.* 6*d.*
34. Coated with paint once every year, 45*l.* 5*s.* 6*d.* Paints procured by contract; workmanship not by contract.
35. Two keepers; one at 64*l.* 12*s.* 4*d.*, one at 46*l.* 3*s.*
36. 855*l.* total cost.
37. 1857, repairs, 15*l.* 6*s.* 2*d.*; cylinders, 5*l.* 8*s.*; cleaning stores, 2*l.* 3*s.* 4*d.* 1858, repairs, 3*l.* 11*s.*; cylinders, 5*l.* 8*s.*; cleaning stores, 2*l.* 3*s.* 4*d.*
38. 1857, oil, 635 gallons; wicks, 10 gross. 1858, oil, 634 gallons; wicks, 10 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wick. 1857, 3*s.* 6*d.* per gross; 1*l.* 15*s.* total cost. 1858, 3*s.* 6*d.* per gross; 1*l.* 15*s.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 579*l.* 17*s.* 11*d.* 1858, quarter, 448*l.* 15*s.* 4*d.* Total for 1852, 2,319*l.* 11*s.* 6*d.*
44. 1852, 528*l.* 10*s.*, including boat attendance, freight of stores from Dublin. 1858, 407*l.* 10*s.* 2*d.*, ditto.
45. None.
46. None.
47. None.
48. No complaint or representation as to the light being unnecessary or placed in an unsuitable position.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. One circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store close to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; none applied for. None required, the position being distant from any tidal navigation or tidal harbour.
56. Signal mast and flag. No night signals used.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers are removed from the station as changes from other lighthouses require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

151.

SKELLIGS, UPPER.

West Coast of Ireland, on the Great Skelligs Rock off West Coast, Co. Kerry.

Lat. 51° 46' 14" N., Lon. 10° 32' 45" W.

3. No local authority.
4. There are two lights on the Great Skelligs Rock. Upper Light distant from the Lower Light 260 yards, bearing N. by W.
5. 1820.
6. The Knight of Kerry (Manrice Fitzgerald) and others.
7. A sea light being requisite off the south-west coast of Ireland, previously unlighted, the Skelligs Rocks were considered the best general position.
8. 1826.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, not by contract.
10. Sea light.
11. Cut stone; solid walling; tower is of circular form, painted white.
12. No separate external conductor. Wrought-iron handrail forms a continuous conductor from lantern to base of tower.
13. 48 feet.
14. 372 feet.
15. 22½ miles.
16. 26 miles.
17. 240° N.E. by E. to S. by E.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company.
25. Through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None used.
27. None.
28. 38 days.
29. 23,791. 15s. 10d., including cost of lantern, light apparatus, &c. Large portion of outlay in rock cutting to form platform for sites of lighthouse and dwellings; roadway cut from incline of solid rock.
30. Finished.
31. Lantern sash, 13 feet diameter, 8 feet high. 1,050*l.* (including cut stone blocking).
32. Not purchased; erected by Corporation.
33. 1*l.* 15s. 6d.
34. Coated with paint once every year, 45*l.* 5s. 6d. Paints procured by contract; workmanship not by contract.
35. Two keepers; one at 6*l.* 12s. 4d., one at 4*l.* 3s.
36. 895*l.* total cost.
37. 1857, repairs, 22*l.* 8s. 9d.; cylinders, 5*l.* 8s.; cleaning stores, 2*l.* 3s. 4d. 1858, cylinders, 5*l.* 8s.; cleaning stores, 2*l.* 3s. 4d.
38. 1857, oil, 722 gallons; wicks, 12 gross. 1858, oil, 731 gallons; wicks, 12 gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon. 1858, 3s. 5d. per gallon.
40. Argand cotton wicks. 1857, 3s. 6d. per gross; 2*l.* 2s. total cost. 1858, 3s. 6d. per gross; 2*l.* 2s. total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per Special Return No. 1.
43. 1852, quarter, 57*l.* 17s. 11d. 1858, quarter, 448*l.* 15s. 4d. Total for 1852, 2,319*l.* 11s. 6d.
44. 1852, 528*l.* 10s., including boat attendance, freight of stores from Dublin, &c. 1858, 407*l.* 10s. 2d., ditto.
45. None.
46. None.
47. None.
48. No complaint or representation as to the light being unnecessary or placed in an unsuitable position.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store close to the lighthouse.
54. None used in 1858. Barometer and thermometer kept at the lower house.
55. No tide signals used; none applied for. None required, the position being distant from any tidal navigation or tidal harbour.
56. Signal mast and flag. No night signals used.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers changed from the station as changes from other lighthouses require and allow.

152.

VALENTIA.

South-west Coast of Ireland, Cromwell's Fort Point, West Side of main Entrance of Harbour.

Lat. 51° 56' N., Lon. 10° 19' 16" W.

3. No local authority.
4. One light.
5. 1837.
6. Inhabitants of Valentia; the knight of Kerry.
7. To guide from seaward to the harbour; to lead through the easterly entrance channel, past the harbour rock, and to mark the ledge of rocks on which the lighthouse stands.
8. 1841.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, not by contract.
10. Harbour light.
11. Chiefly cut stone; solid walls. The tower is circular; the walls of the old building of Cromwell's Fort have been retained for enclosure.
12. No separate external conductor. Wrought-iron handrail forms a continuous conductor from lantern to base of tower.
13. 48 feet.
14. 54 feet.
15. 8½ miles.

24. Reflectors from the Soho Plate Company. Wrought-iron frame, &c. by the Corporation.
25. Through dome. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None used; none applied for.
27. None.
28. None.
29. 10,399*l.* 16s. 6d., including cost of lantern, light apparatus, approaches, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high. 669*l.*, including cut stone blocking.
32. Not purchased; erected by Corporation.
33. 5*l.* 11s. 9d.
34. Painted once every year, 9*l.* 14s. 10d. Paints procured by contract; workmanship not by contract.
35. One keeper at 6*l.* 12s. 4d.
36. 475*l.*; 50*l.* Total 525*l.*
37. 1857, cylinders, 3*l.* 12s.; cleaning stores, 1*l.* 1s. 8d. 1858, repairs, 15*l.* 1s. 3d.; cylinders, 3*l.* 12s.; cleaning stores, 1*l.* 1s. 8d.
38. 1857, oil, 380 gallons; wicks, 6 gross. 1858, oil, 379 gallons; wicks, 6 gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon. 1858, 3s. 5d. per gallon.
40. Argand cotton wick. 1857, 3s. 6d. per gross; 1*l.* 1s. total cost. 1858, 3s. 6d. per gross; 1*l.* 1s. total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 7*l.* 2s. 9d. 1858, quarter, 6s. 5d. Total for 1852, 28*l.* 11s.
44. 1852, 237*l.* 7s. 8d. including boat attendance, freight of stores, &c. 1858, 159*l.* 13s., ditto.
45. None.
46. None.
47. None.
48. No complaints or representation.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store adjoining lighthouse.
54. Barometer and thermometer.
55. No tide signals used; none applied for.
56. Signal mast and flag; no night signals.
57. One keeper. Keeper changed from the station as changes at other lighthouses require and allow.

153.

SAMPHIRE ISLAND.

West Coast of Ireland, in Tralee Bay,
on lesser Samphire Island.

Lat. 52° 16' 19" N., Lon. 9° 53' 14" W.

3. No local authority.
4. One light.
5. 1846.
6. Shipowners of Tralee.
7. To guide vessels to the entrance of Tralee Bay and past the outer rocks to Samphire Island, and to the anchorage within Samphire Island.
8. 1854.
9. Designed by George Halpin, Engineer to the Port of Dublin Corporation. Fuilt under his direction by the workmen of the Corporation, not by contract.
10. Harbour light.
11. Dressed stone, solid wall, coated with cement inside.
12. No external lighting conductor. Usual arrangement of iron handrail of tower so as to form continuous conductor from lantern to base of tower.
13. 42 feet.
14. 56 feet.
15. 8½ miles.
16. 9 miles.
17. N. ¼ E. to E. by S. ¼ S.
18. Fixed. The light is white from E. by S. ¼ S. to W.N.W., and red seaward from W.N.W. to N. ¼ E.
19. Fixed.
20. During every night from sunset to sunrise.
21. Dioptric.
22. 4th order.
23. None.
24. Chance, of Birmingham.
25. Through centre of dome. Ventilation also in floor and blocking of lightroom to regulate supply of air.
26. No fog signals at this station.
28. 9 days.
29. 7,000*l.* 17*s.* 1*d.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. 472*l.*, including stone blocking.
32. Not purchased; erected by the workmen of the Corporation.
33. 10*s.*
34. General coating of paint once in each year, 15*l.* 4*s.* Paints procured by contract; workmanship not by contract.
35. One keeper at 40*l.* 3*s.*
36. 20*l.*
37. 1857, cylinders, 14, 4*s.*; cleaning stores, 1*l.* 1*s.* 8*d.* 1858, cylinders, 1*l.* 4*s.*; cleaning stores, 1*l.* 1*s.* 8*d.*
38. 1857, oil, 80 gallons; wicks, 2 gross. 1858, oil, 85 gallons; wicks, 2 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 8*s.* total cost. 1858, 8*s.* total cost.
41. Nil.
42. Light maintained from Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, nil. 1858, quarter, 2*l.* 10*s.*
44. 1852, not lighted. 1858, 208*l.* 10*s.* 9*d.*, including boat attendance, freight of stores, &c.
45. None.
46. None.
47. None.
48. No complaints or representation as to the light being unnecessary or in an unsuitable position.
49. In July 1858, Tralee Harbour Commissioners represented that the light is not sufficiently powerful. The matter is still under consideration.
50. By Committee of the Port of Dublin Corporation.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished during night since established.
53. At least two spare burners kept in readiness.
54. None in 1858.
55. No tide signals at this station. There has not been any application to have tide signals shown.
56. Signal mast and flag.
57. One keeper. Keeper changed from the station as required by changes at other stations.

154.

TARBERT ROCK.

West Coast of Ireland, River Shannon, on
tidal Rock off North Side of Tarbert
Island.

Lat. 52° 35' 30" N., Lon. 9° 21' 47" W.

3. No local authority.
4. One light.
5. 1829.
6. Chamber of Commerce, of Limerick.
7. To light the channel of the Shannon westward and eastward of Tarbert rock; to mark the tidal rock on which it stands; and to guide into the anchorage of Tarbert rocks.
8. 1834.
9. Designed by George Halpin, Engineer to the Port of Dublin Corporation. The walling of tower built by contract by Mr. Howard, of Limerick. The lantern erected by the Corporation.
10. Harbour light.
11. Cut stone; solid wall, coated with cement inside, circular, painted white outside. Identified by its position outside of Tarbert Island at outer end of a metal bridgeway.
12. No separate external conductor. Usual arrangement of wrought-iron handrail to form continuous conductor from lantern to lower floor of tower.
13. 84 feet.
14. 54 feet.
15. 8½ miles.
16. 13 miles.
17. 267° S. ¼ W. to W. ¼ N.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 2nd order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Subo Plate Company. Wrought-iron frame by workmen of the Corporation.
25. Through dome as in the other catoptric lights. Ventilators also in blocking and floor of lightroom to regulate supply of air.
26. None used.
27. None.
28. Not registered.
29. 10,112*l.* 15*s.* 3*d.*, including cost of lantern and light apparatus, metal bridge from tower on rock to Tarbert Light.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high. 99*l.*, including cut stone blocking.
32. Not purchased; erected by Corporation.
33. 2*l.* 12*s.* 7*d.*
34. Coated with paint once every year, 41*l.* 18*s.* 8*d.* Paints procured by contract; workmanship not by contract.
35. One keeper at 61*l.* 12*s.* 4*d.*
36. 771*l.* (total cost).
37. 1857, cylinders, 3*l.* 2*s.*; cleaning stores, 1*l.* 9*s.* 8*d.* 1858, repairs, 1*l.* 7*s.* 8*d.*; cylinders, 2*l.* 3*s.*; cleaning stores, 1*l.* 3*s.* 6*d.*
38. 1857, oil, 673 gallons; wicks, 10 gross. 1858, oil, 679 gallons; wicks, 10 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 1*l.* 15*s.* total cost. 1858, 3*s.* 6*d.* per gross; 1*l.* 15*s.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 54*l.* 14*s.* 10*d.* 1858, quarter, 111*l.* 7*s.* 8*d.* Total for 1852, 218*l.* 19*s.* 6*d.*
44. 1852, 262*l.* 12*s.* 4*d.*, including cost of freight of oil and other stores from Dublin. 1858, 362*l.* 4*s.* 8*d.*, ditto.
45. None.
46. None.
47. None.
48. No representation as to the light being unnecessary.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store.
54. Barometer and thermometer.
55. No tide signals used; no application to have them used. The River Shannon is a deep water navigation, considerably eastward of Tarbert.
56. Signal mast and flag; no night signals used.
57. One keeper. Keeper changed from the station as changes at other lighthouses require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

155.

BEEVES ROCK.

River Shannon, on North Side of the Main Channel.

Lat. 53° 39' N., Lon. 9° 1' 18" W.

3. No local authority.
4. One light.
5. 1846.
6. Application made chiefly with reference to proposed light on Foynes Island by Lord Montecagle and by the Chamber of Commerce, Limerick.
7. To light that reach of the Shannon in which it is situate, and to guide in the channel eastward and west of the Beeves Rock, also to mark that tidal rock. The Beeves light also guides to entrance of the Ferguson.
8. 1854.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation. The masonry built by contract by Mr. W. Burgess, of Limerick. The lantern erected by workmen of the Corporation.
10. Harbour light.
11. Tower and dwelling of cut stone, solid, without separate inner wall. Coated inside with cement. Painted white outside. At once recognised, from its insulated position, and the rock being covered unless at low water.
12. Usual arrangement of iron handrail to form continuous conductor to base of tower. No external conductor.
13. 74 feet.
14. 55 feet.
15. The land limits the range of this light.
16. Limited to reach of the Shannon in which it is situate.
17. 360°. Lighted all around the circle.
18. Fixed. White, as seen between E. $\frac{1}{2}$ N. and N. W. by W. Red to north of rock.
19. Fixed.
20. During every night from sunset to sunrise.
21. Dioptric.
22. 3rd order.
23. No alteration in description or character of illuminating apparatus since first lighted.
24. Chance, of Birmingham.
25. Central tube through dome of the lantern.
26. No fog signals.
27. None.
28. 20 days.
29. 9,494l. 8s. 1d., including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 10 feet high; 696l. (including stone blocking.)
32. Not purchased. Was built by the Port of Dublin Corporation.
33. 4l. 7s. 10d.
34. General coating of paint once in each year, 21l. 14s. 5d. Paints procured by contract. Workmanship not by contract.
35. Two keepers, one at 46l. 3s.; one at 36l. 10s.
36. 349l. 16s.; 91l. Total, 440l. 16s.
37. 1857, cylinders, 1l. 4s.; cleaning stores, 1l. 7s. 3d. 1858, repairs, 3l. 9s. 11d.; cylinders, 1l. 4s.; cleaning stores, 1l. 7s. 3d.
38. 1857, oil, 142 galls.; wicks, $\frac{1}{2}$ gross. 1858, oil, 142 galls.; wicks, $\frac{2}{3}$ gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon; 1858, 3s. 5d. per gallon.
40. Cotton concentric wick. 1857, 1l. 0s. 3d. total cost; 1858, 1l. 0s. 3d. total cost.
41. None.
42. From Mercantile Marine Fund. Revenue is collected and paid as per statement in Special Return No. 1.
43. Not lighted in 1852. 1858, quarter, 11l. 7s. 6d.
44. 1852, 401l. 12s. 6d. 1853, 394l. 12s. 5d., including boat attendance and freight of stores.
45. None.
46. None.
47. None.
48. There has not been any representation as to the light being unnecessary or placed in an unsuitable position.
49. There has not been any complaint as to the efficiency of the light since first established.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. The light has not been known to have been extinguished.
53. Two spare lamp burners kept in readiness. Oil stored in oil store, forming portion of same building.
54. None in 1858.
55. Tide signals not used; there has not been any application or requisition to have them used at the station. The main channel of the adjacent reach of the Shannon is navigable at low water.
56. Signal mast and flag only as yet.
57. Keeper on watch is relieved in lightroom at 12 o'clock midnight. Keeper changed from the station as required by changes at other stations.

156.

KILCREDANE.

West Coast of Ireland, North Side of River Shannon, Co. Clare.

Lat. 52° 34' 47" N., Lon. 9° 42' 34" W.

3. No local authority.
4. One light.
5. 1818.
6. Chamber of Commerce, Limerick.
7. To light reaches of the Shannon, eastward and westward of Kilcredane Point.
8. 1824.
9. Designed by the late George Halpin, Engineer to Port of Dublin Corporation, and built under his direction by workmen of the Corporation, not by contract.
10. Harbour light.
11. Cut stone; solid walls; the tower is of circular form, coloured white.
12. No separate external conductor. Usual arrangement of wrought-iron handrail forms continuous conductor from lantern to base of tower.
13. 43 feet.
14. 133 feet.
15. 13½ miles.
16. 16 miles. Red light not seen at greater distance than sea horizon, unless in very clear weather.
- 17.
18. Fixed. The light is coloured red to seaward, and is shown of the natural appearance, white, eastward to the river.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 2nd order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company.

26. None used.
27. None.
28. 10 days.
29. including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash, feet diameter, feet high.
32. Not purchased; erected by the Corporation.
33. 3l. 10s. 5d.
34. Coated with paint once every year, 23l. 16s. Paints procured by contract; workmanship not by contract.
35. One keeper at 64l. 12s. 4d.
36. 558l. total cost.
37. 1857, cylinders, 3l. 12s.; cleaning stores, 1l. 9s. 3d. 1858, repairs, 9l. 14s. 4d.; cylinders, 3l. 12s.; cleaning stores, 1l. 9s. 3d.
38. 1857, oil, 515 gallons; wicks, 8 gross. 1858, oil, 518 gallons; wicks, 8 gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon. 1858, 3s. 5d. per gallon.
40. Argand cotton wicks. 1857, 3s. 6d. per gross; 1l. 8s. total cost. 1858, 3s. 6d. per gross; 1l. 8s. total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 34l. 1s. 2d. 1858, quarter, 11l. 14s. 3d. Total for 1852, 136l. 4s. 8d.
44. 1852, 257l. 16s. 1d., including cost of freight of stores, &c., from Dublin. 1858, 226l. 16s. 4d., ditto.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store close to the lighthouse.
54. None in 1858.
55. No tide signals used; no application made to have them used.
56. Signal mast and flag. No night signals used.
57. One keeper. Keeper changed from the station as changes from other lighthouses require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

157.

LOOPHEAD.

West Coast of Ireland, North Side of Entrance to the Shannon, near to extremity of the Point.

Lat. $52^{\circ} 33' 38''$ N., Lon. $9^{\circ} 55' 54''$ W.

3. No local authority.
4. One light.
5. Transferred by Revenue Board in 1810.
6. Not known.
7. As the most prominent point between the Shannon and Galway Bay, necessary as a sea light, and as guiding from seaward to the entrance of the Shannon.
8. 1802, exhibition of old light. 1853, first exhibition of light from present tower.
9. Present lighthouse designed by the late George Halpin, Engineer to the Port of Dublin Corporation. The tower built by contract by Mr. Burgess, of Limerick. The lightroom erected by workmen of the Corporation.
10. Sea light.
11. Cut stone round tower; solid wall coated with cement inside; painted white outside; identified from its position at end of the Loophead.
12. Usual arrangement of wrought-iron handrail to form continuous conductor from lantern to base of tower. No separate external conductor.
13. 75 feet.
14. 277 feet.
15. 19 miles.
16. 23 miles.
17. 285° N. E. by F. $\frac{1}{4}$ E. to S. E. by E.
18. Fixed light of the natural appearance.
19. Fixed.
20. During every night from sunset to sunrise.
21. Dioptric.
22. 1st order.
23. None.
24. Mr. Wilkins, of London.
25. Ventilating tube through centre of dome; ventilating open in floor and in blocking of lightroom, to regulate supply of air.
26. No fog signals at this station.
27. None.
28. 10 days.
29. 6,684l. 11s. 5d., including cost of lantern, light apparatus, and present tower, but not including old dwellings.
30. Finished.
31. Lantern sash 13 feet diameter, 10 feet high; 752l. 6s. 3d., including stone blocking.
32. Not purchased; erected by the Port of Dublin Corporation. The tower walling by contract.
33. 9l. 1s. 8d.
34. General coating of paint once in each year, 46l. 4s. 8d. Paints procured by contract. Workmanship not by contract.
35. Two keepers, one at 64l. 12s. 4d., one at 46l. 5s.
36. 1,756l. 8s. 4d.; 180l. 7s. 8d.—Total, 1,936l. 11s.
37. 1857, cylinders, 4l. 4s.; cleaning stores, 2l. 7s. 4d. 1858, cylinders, 4l. 4s.; cleaning stores, 2l. 7s. 4d.
38. 1857, oil, 518 gallons; wicks, 34 gross. 1858, oil, 521 gallons; wicks, 34 gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon; 1858, 3s. 5d. per gallon.
40. Cotton concentric wick. 1857, 2l. 5s. total cost. 1858, 2l. 5s. total cost.
41. None at this station.
42. From the Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 67l. 2s. 7d.; 1858, quarter, 22l. 2s. 3d.—Total for 1852, 268l. 10s. 4d.
44. 1852, 649l. 3s. 2d. (including freight of stores.) 1858, 438l. 8s. 6d. ditto.
45. None.
46. None.
47. None.
48. There have not been any representations as to the light being unnecessary or placed in an unsuitable position.
49. There have not been any complaints or representation as to the efficiency of the light.
50. By Committee of the Board of the Port of Dublin Corporation and by Superintendent of Lighthouses.
51. On circuit of inspection in 1857. Ditto in 1858.
52. Not known to have been extinguished between 1848 and 1858.
53. At least two spare burners kept in readiness.
54. Barometer and thermometer.
55. No tide signals used.
56. Signal mast and flag, no code of signals as yet.
57. Keeper on watch is relieved in lightroom at 12 o'clock midnight. Keepers are changed from the station as changes from the other stations require and allow.

158.

ARRAN ISLANDS, SOUTH.

West Coast of Ireland, on Inisheer Island, off Coast of County Galway.

Lat. $53^{\circ} 2' 40''$ N., Lon. $9^{\circ} 31' 30''$ W.

3. The Port of Dublin Corporation have not any formally appointed local agents paid as such; correspondence is held directly with the lightkeepers.
4. One light.
5. 1850. Note.—Light on the Great Island of Arran was established in 1817, discontinued in 1854.
6. In 1850 the Galway Harbour Commissioners stated objections to position of old lighthouse on Large Island; the present sites were selected by Port of Dublin Corporation and approved by the Trinity Board.
7. To mark the southern extremity of the chain of the Aran Islands, and to light the south sound leading from the Atlantic into Galway Bay.
8. 1st December 1857.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation and Superintendent of Lighthouses, from whose plans and specifications, and under whose directions the masonry of the tower and dwellings was built by contract. Contractors, Messrs. Crowe, of Dublin.
10. First-class sealight.
11. Limestone, chert walling of solid cut stone without a separate inner wall.
12. Wrought-iron handrail in tower forms a continuous conductor from lantern to base. No separate external conductor.
13. 112 feet.
14. 104 feet.
15. 11½ miles.
16. 15 miles.
17. 225° E. by N. to N.W. $\frac{1}{4}$ N.
18. Fixed. Light of natural appearance, white, unless in direction of Finnis Rock, in which it is shown of red colour.
19. Fixed.
20. During every night from sunset to sunrise.
21. Dioptric, having catadioptric zones above and below refracting belt.
22. 1st order; one large concentric wick burner.
23. Apparatus is modern, and there has not been any alteration in its description or character since first exhibited.
24. Messrs. Chance, of Birmingham.
25. Central ventilating tube. The ventilating tubes of dioptric lights are all on construction known as Faraday's.
- 26, 27. None.
28. 16 days.
29. 14,324l. 2s. 4d., including cost of lantern, light apparatus, dwellings, roadways, &c.
30. All buildings essentially necessary are completed.
31. Lantern sash 13 feet diameter, 10 feet high: 850l.; 112l.; total, 962l.
32. Lighthouse was not purchased; erected by the Port of Dublin Corporation.
33. Buildings being new, did not require repair to close of year 1858.
34. General coating of paint once each year, 16l. 15s. 10d. Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 64l. 12s. 4d.; one at 46l. 5s.
36. 1,150l.; 95l. Total, 1,245l.
37. 1857, nil. 1858, cylinders, 4l. 4s.; cleaning stores, 2l. 5s. 4d.
38. 1857, not lighted until December. 1858, oil, 399 galls.; wicks, 34 gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gall. 1858, 3s. 5d. per gall.
40. Cotton concentric wick. 1857, not lighted until December. 1858, 2l. 5s. total cost.
41. None.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. Quarter 1852, not lighted. Quarter 1858, 1l. 6s. 7d.
44. 1852, nil. 1858, 320l. 12s. 11d., (including cost of attendance of cutter, freight of stores, &c.)
- 45, 46, 47. None.
48. None; on the contrary, the Commissioners who examined Galway Bay reported that the approaches to it were admirably lighted.
49. No complaints or representations made.
50. By Committee of the Board and by the Superintendent of Lighthouses.
51. By Superintendent in 1857; on circuit of inspection in 1858.
52. Not known to have been extinguished during night since lighted.
53. At least two spare lamp burners kept in readiness. (Oil stored in oil store adjoining principal keeper's dwelling and near to lightroom.)
54. Barometer and thermometer.
55. No tide signals used. Lighthouse not in the immediate vicinity of any tidal harbour or tidal navigation.
56. Mast and flag in use. Code of signals will this year be exhibited at this and a few of the principal rock stations.
57. Lightkeepers are relieved from watch in lightroom at 12 o'clock, midnight. Keepers are changed from the station as changes from other stations require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

159.

ARRAN ISLANDS, NORTH.

On Rock the most Northern and Western of the Chain of Islands Westward of Galway Bay.

Lat. 53° 8' 55" N., Lon. 9° 51' 30" W.

3. No local authority. (The owner of the Hooker, attending for the time being, transacts at Galway any requisite business for the lightkeepers, such as purchase of provisions.)
4. One light.
5. 1850.

Note.—Light on the Great Island of Arran was established in 1817, discontinued in 1854.

6. In 1850 the Galway Harbour Commissioners stated objections to position of old lighthouse on large island. The present sites were selected by the Port of Dublin Corporation, and approved by the Trinity Board.
7. As marking the northern extremity of the chain of Arran Island, being also sufficiently to the westward to serve as a passing light, and as marking the entrance of the North Channel into Galway.
8. 1st December 1857.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation and Superintendent of Lighthouses, from whose plans and specification, and under whose supervision the masonry of tower and dwellings was built by contract. Contractors, Messrs. Crowe, of Dublin.
10. Sea light. First class.
11. Limestone. Solid masonry of cut stone, without any separate inner wall, interior carefully pointed with cement, and not coated.
12. Wrought-iron handrail in tower forms a continuous conductor from lantern to base. No separate external conductor.
13. 101 feet.
14. 115 feet.
15. 12 miles.
16. 15 miles.
17. 326° E.S.E. to S. E. by S.
18. Revolving. The light of natural colour, white, gradually increasing and decreasing in strength.
19. Brightest appearance or flash once in every 3 minutes.
20. From sunset to sunrise during the whole night.
21. Dioptric.
22. 1st order, one concentric wick burner lighted.
23. The illuminating apparatus is modern, having the upper and lower portions arranged on the holophotal system, and there has not been any alteration in the description or character of the illuminating apparatus since first lighted.
24. Wilkins, of Long Acre, London.
25. Ventilating tube through centre of dome of lantern.
26. None.
27. None.
28. 15 days.
29. 15,023*l.* 1*s.* 5*d.*, including cost of lantern, lighthouse, apparatus, roadways, &c.
30. All buildings necessary completed.
31. Lantern sash 13 feet diameter, 10 feet high; 850*l.*; 125*l.*; total, 975*l.*
32. Not purchased. Built by the Port of Dublin Corporation.
33. Buildings being new, did not require repairs to close of 1858.
34. General coating of paint once in each year, 20*l.* 0*s.* 5*d.* Paints procured by contract. Workmanship not by contract.
35. Two keepers, one at 6*l.* 12*s.* 4*d.*, one at 4*l.* 2*s.*
36. 1,727*l.*; 119*l.* Total 1,846*l.*
37. 1858, cylinders, 4*l.* 4*s.*; cleaning stores, 2*l.* 5*s.* 4*d.*
38. 1857, not lighted until December. 1858, oil, 400 gallons; wicks, 31 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon; 1858, 3*s.* 5*d.* per gallon.
40. Cotton concentric wick. 1857, not lighted until December. 1858, 2*l.* 5*s.* total cost.
41. Nil.
42. From Mercantile Marine Fund.
43. 1852, quarter, 45*l.* 1*s.* 5*d.*; 1853, quarter, 11*l.* 19*s.* 9*d.* Total for 1852, 18*l.* 6*s.* 8*d.*
44. 1858, 336*l.* 10*s.* (including attendance of cutter and freight of stores.)
45. None.
46. None.
47. None.
48. No complaint or representation concerning position of the light since exhibited. Commissioners who examined Galway Bay reported that the approaches were extremely well lighted.
49. No complaint or representation as to the efficiency of the light since first exhibited.
50. By Committee of the Board and by the Superintendent of Lighthouses.
51. 1st December 1857, by superintendent on circuit of inspection in 1858.
52. Not extinguished during night since first exhibited.
53. At least two spare burners kept in readiness. Oil stored in the oil store.
54. Barometer and thermometer.
55. No tide signals. This light is not in the vicinity of any tidal harbour or navigation.
56. Mens by signal flag of summoning attendance of boat by day, if required.
57. Relieved from watch in lightroom at 12 o'clock midnight. Changed from station consistently with requirement for changes at other stations.

160.

MUTTON ISLAND.

West Coast of Ireland, on Island in Galway Harbour.

Lat. 53° 15' 13" N., Lon. 9° 3' 10" W.

3. No local authority.
4. One light.
5. 1810.
6. Corporation and merchants of Galway.
7. To light Galway Bay from its entrance to the inner roadstead, and to guide past Mutton Island.
8. 1817.
9. Designed by the late George Halpin, Engineer to Port of Dublin Corporation; built under his direction by the workmen of the Corporation, and not by contract.
10. Harbour light.
11. Cut stone; solid walling; the tower is circular, coloured white, and known from its position on small island.
12. No separate external conductor. Wrought-iron handrail forms a continuous conductor from lantern to base of tower.
13. 34 feet.
14. 33 feet.
15. 6½ miles.
16. 11 miles.
17. 253° N.E. to W.N.W. ½ N.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 2nd order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company.
25. Through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None.
27. None.
28. 30 days.
29. 4,020*l.* 3*s.* 5*d.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash, feet diameter, feet high.
32. Not purchased.
33. 2*l.*
34. Coated with paint once every year, 8*l.* 8*s.* 2*d.* Paints procured by contract; workmanship not by contract.
35. One keeper at 6*l.* 12*s.* 4*d.*
- 36.
37. 1857, repairs, 15*l.* 16*s.* 11*d.*; cylinders, 3*l.* 12*s.*; cleaning stores, 1*l.* 5*s.* 8*d.* 1858, cylinders, 3*l.* 12*s.*; cleaning stores, 1*l.* 5*s.* 8*d.*
38. 1857, oil, 480 gallons; wicks, 8 gross. 1858, 487 gallons; wicks, 8 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 0*d.* per gross; total cost, 1*l.* 8*s.* 1858, 3*s.* 0*d.* per gross; total cost, 1*l.* 8*s.*
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 1*l.* 0*s.* 8*d.* 1858, quarter, 3*l.* 10*s.* 8*d.* Total for 1852, 6*l.* 2*s.* 8*d.*
44. 1852, 222*l.* 14*s.* 9*d.*, including boat attendance, freight of stores, &c. from Dublin. 1858, 311*l.* 8*s.* 8*d.*, ditto.
45. None.
46. None.
47. None.
48. No representation made as to the light being unnecessary or placed in an unsuitable position.
49. No complaint made as to the efficiency of the light, but representations were made that an additional light was required on the Black Rock farther out in the bay.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store near to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used.
56. Signal mast and flag.
57. One Keeper. Keeper changed from the station as changes from other lighthouses require and allow.

161.

SLYNE HEAD, SOUTH.

West Coast of Ireland, on outermost Islet
off the Head, Co. Galway.

Lat. and Lon. stated in Return for North Lighthouse.

3. The lightkeepers manage all the business of the station under direction from Dublin.
4. Special return given for Slyne Head North Lighthouse, which is distant 142 yards, bearing $N \frac{1}{2} E$.
5. 1810, 1819.
6. Corporation of Galway and others.
7. As the best position for a sea light, being at the outer end of a chain of islets and rocks extending westward of a projecting headland, and as marking that point, and indicating danger, northward and southward of it.
8. 1836.
9. Designed by the late George Halpin, Engineer to Port of Dublin Corporation. Built by the workmen of the Corporation, and not by contract.
10. Sea light.
11. Stone tower; solid wall; coated with cement inside; painted white outside. Identified by the prominent position of the chain of low islets, and by the second tower, or north lighthouse.
12. Usual arrangement of wrought iron handrail to form continuous conductor from lantern to base of tower. No separate external conductor.
13. 79 feet.
14. 115 feet.
15. 12 miles.
16. 15 miles.
17. $312^{\circ} S. E. \frac{1}{2} E$. to E . by N .
18. Fixed light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in the description or character of illuminating apparatus since 1845.
24. Reflectors from Soho Plate Co. Frame by workmen of the Corporation.
25. Ventilator through dome of lantern. Ventilators also in floor and blocking of lightroom to regulate the supply of air.
26. No fog signals required at this station.
27. None.
28. 22 days.
29. 20s. 2d., including cost of lantern, light apparatus, &c.
30. Finished.
31. 90sL (including stone blocking).
32. Lighthouse erected by workmen of the Corporation; was not purchased.
33. 12l. 15s. 3d.
34. General coating of paint once in each year, 31l. 12s. 9d. Paints procured by contract; workmanship not by contract.
35. One keeper at 64l. 12s. 4d.; one ditto at 46l. 3s.
36. 827l.; 150l. Total, 977l.
37. 1837, cylinders, 7l. 4s.; cleaning stores, 2l. 9s. 4d. 1858, repairs, 31l. 14s. 11d.; cylinders, 7l. 4s.; cleaning stores, 2l. 9s. 4d.
38. 1837, oil, 868 gallons; wicks, 13 gross. 1858, oil, 888 gallons; wicks, 13 gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon; 1858, 3s. 5d. per gallon.
40. Argand cotton wicks. 1857, 3s. 6d. per gross; 2l. 5s. 6d. total cost. 1858, 3s. 6d. per gross; 2l. 5s. 6d. total cost.
41. Nil.
42. From the Mercantile Marine Fund.
43. 1852, quarter, 41l. 7s. 11d. 1858, quarter, 8l. 16s. 3d. Total for 1852, 165l. 11s. 7d.
44. 1852, 586l. 12s. 11d., including boat attendance and freight of stores. 1858, 407l. 10s. 2d., ditto.
45. None.
46. None.
47. None.
48. No complaints or representation.
49. No complaints or representation as to the efficiency of the light.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished during night since lighted.
53. Spare lamp and burner kept ready. Oil stored in oil store near to lighthouse.
54. Barometer and thermometer.
55. No tide signals used. Tide signals not requisite, station being at a distance from any tidal harbour or tidal channel.
56. Signal mast and flag.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers are changed from the station as changes from other stations require and allow.

162.

SLYNE HEAD, NORTH.

West Coast of Ireland, on outermost Islet
of the Head, County Galway.Lat. $53^{\circ} 29' 58'' N.$, Lon. $10^{\circ} 14' 1'' W$.

3. The lightkeepers manage all the business of the station under direction from Dublin.
4. One light, which is distant from the south lighthouse on the same islet 142 yards, bearing $N \frac{1}{2} E$.
5. 1819.
6. Corporation of Galway and others.
7. As the best position for a sea light, being at the outer end of a chain of islets and rocks extending westward of a projecting headland, and as marking that point, and indicating danger northward and southward of it.
8. 1836.
9. Designed by (the late) George Halpin, Engineer to Port of Dublin Corporation. Built by workmen of the Corporation; buildings not by contract.
10. Sea light.
11. Tower of stone masonry; solid wall, without a separate inner wall, coated with cement inside; painted white outside; identified by the appearance of two towers at the extremity of a chain of low islets and rocks.
12. No external conductor. Usual arrangement of iron handrail to form continuous conductor from lantern to base of tower.
13. 79 feet.
14. 126 feet.
15. 13 miles.
16. 18 miles.
17. 337° . Light obscured by lantern in the direction of Slyne Head.
18. Revolving; showing one red and two white faces.
19. Makes a complete revolution in six minutes; shows one face or flash every two minutes; the red flash appearing every sixth minute.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in description or character of illuminating apparatus since 1845, farther than modification of the burners to suit the burning of rapeseed oil.
24. Reflectors made by the Soho Plate Co.; frame by workmen of the Corporation; revolving machine by Davi, of Edinburgh.
25. Ventilator through dome of lantern; ventilators are placed in floor and blocking of lightroom to regulate supply of water.
26. No fog signals at this station.
27. None.
28. 12 days.
29. 20s. 2d., including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high. 90sL (including stone blocking).
32. Lighthouse erected by workmen of the Corporation; was not purchased.
33. 12l. 15s. 3d.
34. General coating once each year, 31l. 12s. 9d. Paints procured by contract; workmanship not by contract.
35. Two keepers; one at 64l. 12s. 4d., one at 46l. 3s.
36. 892l.; 288l.; 150l. Total, 1,280l. revolving machine.
37. 1857, cylinders, 7l. 4s.; cleaning stores, 2l. 9s. 4d. 1858, repairs, 31l. 14s. 5d.; cylinders, 7l. 4s.; cleaning stores, 2l. 9s. 4d.
38. 1857, oil, 894 gallons; wicks, 14 gross. 1858, oil, 942 gallons; wicks, 14 gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon. 1858, 3s. 5d. per gallon.
40. Argand cotton wick. 1857, 3s. 6d. per gross; 2l. 9s. total cost; 1858, 3s. 6d. per gross; 2l. 9s. total cost.
41. None at this station.
42. Maintained from the Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 41l. 7s. 11d. 1858, quarter, 8l. 16s. 3d. Total for 1852, 165l. 11s. 7d.
44. 1852, 586l. 12s. 11d., including cost of boat attendance, freight of stores, &c. 1858, 407l. 10s. 2d. ditto.
45. None.
46. None.
47. None.
48. There have not been any representations that the light is unnecessary or placed in an unsuitable position.
49. There have not been any complaints as to the efficiency of the light.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection, 1857; ditto, 1858.
52. Not known to have been extinguished during night since 1848.
53. Spare lamp and burner kept ready. Oil stored in oil store near to lighthouse.
54. None at the north house to 1858; barometer and thermometer at Slyne Head South Lighthouse.
55. No tide signals used; tide signals not requisite, station being at a distance from any tidal harbour or tidal channel.
56. Signal mast and flag.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers are changed from the station as changes from other stations require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

163.

CLARE ISLAND.

West Coast of Ireland, on North Point of Clare Island, Westward of Clew Bay, County Mayo.

Lat. 53° 49' 30" N., Long. 9° 59' 30" W.

3. No local authority.
4. One light.
5. Not ascertained.
6. Not ascertained.
7. The Revenue Board considered this light requisite as a sea light off the west coast of Mayo to guide into Clew Bay and its inner anchorage.
8. 1806.
10. Sea light.
11. Chiefly cut stone, solid walling; tower is of circular form, painted white.
12. No separate external conductor. Usual arrangement of wrought-iron handrail.
13. 39 feet.
14. 841 feet.
15. 21 miles.
16. 26 miles.
17. 247°. S.S.E. $\frac{1}{2}$ E. to W. $\frac{1}{2}$ S.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 1st order.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

171.

KILLYBEGS.

West Coast of Ireland, on St. John's Point,
North Side of Donegal Bay, South Side
of Entrance to Killybegs Harbour.

Lat. 54° 34' 8" N., Lon. 8° 27' 33" W.

3. No local authority.
4. One light.
5. 1825.
6. Merchants and traders of Killybegs.
7. To guide from entrance of Donegal Bay, and also the northern side of the bay, to mark St. John's Point, and to light Killybegs Harbour from its entrance to Rotten Island.
8. 1831.
9. Designed by the late George Halpin, Engineer to Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, not by contract.
10. Harbour light.
11. Chiefly cut stone; tower circular form; painted white outside; readily identified by its position at the extremity of the promontory of St. John's Point.
12. No separate external conductor. Usual arrangement of wrought-iron handrail in tower to form a continuous conductor from lantern to base of lighthouse.
13. 47 feet.
14. 98 feet.
15. 11½ miles.
16. 15 miles.
17. 31° N.E. to E, ¼ S.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric. This is one of the stations at which it is intended to substitute dioptric for catoptric apparatus.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapessed oil. It has been suggested by the Engineer of the Corporation that dioptric apparatus should be substituted for catoptric at this as well as at some others, where considerable portions of the circle is lighted.
24. Reflectors and lamps from the Soho Plate Company.
25. Through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None used.
27. None.
28. 12 days.
29. 9,606*l.* 7*s.* 4*d.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 19 feet diameter, 8 feet high. 1,025*l.* (including cut stone blocking.)
32. Not purchased; erected by Corporation.
33. 12*l.* 11*s.* 8*d.* Not by contract.
34. Coated with paint once every year, 38*l.* 1*s.* 9*d.* Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 64*l.* 12*s.* 4*d.*; one at 46*l.* 3*s.*
36. 1,080*l.* total cost.
37. 1857, repairs, 26*l.* 16*s.* 8*d.*; cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 5*s.* 4*d.* 1858, cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 5*s.* 4*d.*
38. 1857, oil, 840 gallons; wicks, 18 gross. 1858, oil, 835 gallons; wicks, 13 gross.
39. Pale rapessed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 2*l.* 5*s.* 6*d.* total cost. 1858, 3*s.* 6*d.* per gross; 2*l.* 5*s.* 6*d.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 9*l.* 5*s.* 3*d.* 1858, quarter, 15*l.* 11*d.* Total for 1852, 37*l.* 1*s.*
44. 1852, 222*l.* 5*s.* 2*d.*, including cost of freight of stores from Dublin. 1858, 344*l.* 16*s.* 7*d.*, ditto.
45. None.
46. None.
47. None.
48. No representation or complaint as to the position of the light.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store near to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; none applied for.
56. Signal mast and flag. No night signals used.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers are changed from the station as changes from other lighthouses require and allow.

172.

KILLYBEGS HARBOUR.

West Coast of Ireland, on Rotten Island,
South Side of Harbour Channel.

Lat. 54° 36' 51" N., Lon. 8° 26' 23" W.

3. No local authority.
4. One light.
5. 1832.
6. Application for an inner harbour light, made by Mr. Drury, an officer of coast guard, and by others. Site selected by Port of Dublin Corporation.
7. To light the passage from seaward, and the inner harbour channel, the harbour rocks, and the anchorage.
8. 1838.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, not by contract.
10. Harbour light.
11. Chiefly cut stone; solid walling; tower of circular form; painted white on the outside.
12. No separate external conductor. Wrought-iron handrail arranged to form continuous conductor from lantern to base of tower.
13. 47 feet.
14. 66 feet.
15. 9½ miles.
16. 13 miles.

41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 9*l.* 6*s.* 8*d.* 1858, quarter, 9*l.* Total for 1852, 37*l.* 6*s.* 8*d.*
44. 1852, 269*l.* 3*s.* 7*d.*, including boat attendance, freight of stores from Dublin, &c. 1858, 195*l.* 1*s.* 6*d.* ditto.
45. None.
46. None.
47. None.
48. No complaint or representation as to the position of the light.
49. None.
50. By Committee of the Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store close to the lighthouse.
54. None in 1858.
55. No tide signals used. No application made to have them used.
56. Signal mast and flag. No night signals used.
57. One keeper. Keeper changed from the station as changes from other lighthouses require and allow.

173.

RATHLIN O'BIRNE ISLAND.

On Point of the Island off Teelin Head,
County of Donegal, North-west Coast of
Ireland.

Lat. 54° 39' 47" N., Lon. 8° 49' 52" W.

3. The Port of Dublin Corporation have not any formally appointed local agents paid as such.
4. One light.
5. 1841.
6. Memorial from shipowners at Sligo.
7. To mark the south-western prominent point of the county of Donegal.
8. 1856.
9. Tower and dwellings, &c. built by contract from plans and specification, and under supervision of George Halpin, Engineer of the Port of Dublin Corporation. Contractor, Mr. Jas. Creden, for buildings, roads, enclosures, &c.
10. Sea light (secondary class).
11. Tower of stone, solid masonry without separate inner wall, coated inside with cement; walls of dwellings of stone; partition of breeze duct with metal.
12. Usual arrangement of connecting iron handrail with metal enclosure plate of lightroom. No separate exterior conductor.
13. 65 feet.
14. 116 feet.
15. 12 miles.
16. 16 sea miles.
17. (360°). Lighted all round the circle, coloured red to sound or landward.
18. Flashing. Light of natural colour or appearance seaward, coloured red towards mainland.
19. Bright flash every 20 seconds.
20. During whole night, from sunset to sunrise.
21. Dioptric, having catadioptric zones above and below the polygonal lenses.
22. 2nd order, one concentric wick burner.
23. No alteration in character of illuminating apparatus since first lighted; slight alteration in arrangement for colouring light to landward, at suggestion of the Engineer of the Corporation.
24. Wilkins, of London.
25. Central tube through dome of lantern, subsidiary ventilator in blocking over floor of lightroom.
26. None.
27. None.
28. 38 days.
29. 17,140l. 0s. 7d., including cost of lantern, light apparatus, roadways, &c.
30. All necessary buildings completed.
31. Lantern sash, 13 feet diameter, 10 feet high. 817l. (including cut stone blocking.)
32. Was not purchased, was built and paid for by the Port of Dublin Corporation.
33. Lighted only two years.
34. General coating of paint once in each year, 41l. 0s. 6d. Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 64l. 12s. 4d.; one at 46l. 3s.
36. 1,473l. 13s. 5d.; 180l. 18s. Total, 1,653l. 17s. 5d.
37. 1857, repairs, 29l. 9s. 8d.; cylinders, 3l. 10s.; cleaning stores, 2l. 5s. 4d. 1858, cylinders, 3l. 10s.; cleaning stores, 2l. 5s. 4d.
38. 1857, oil, 255 gallons. 1858, oil, 273 gallons.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon. 1858, 3s. 5d. per gallon.
40. Cotton concentric wick. 1857, 1l. 17s. 6d. total cost. 1858, 4l. 17s. 6d. total cost.
41. None at this station.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. Not lighted until 1856. 1858, quarter, 13l. 2s.
44. 1858, 580l. 5s. 7d. (including boat attendance and freight of stores.)
45. None.
46. None.
47. None.
48. No complaints or representations made.
49. No complaints or representations as to efficiency of the light since lighted.
50. By Committee of the Board and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Light not known to have been extinguished during night since lighted.
53. At least two spare lamp burners kept in readiness. Oil stored in oil store adjoining principal keeper's dwelling, close to the lightroom.
54. Barometer and thermometer.
55. No tide signals used; not requisite in this outer position, remote from any harbour or tidal navigation.
56. No signals for night. By day boat, if required, summoned by flag; this is rarely necessary, owing to closeness of island to mainland; regular boat attendance and frequent passing of row boats and hookers engaged in fishing.
57. Keepers are relieved from watch in lightroom at 12 o'clock, midnight. Keepers are changed from the station as changes from other stations require and allow.

174.

TORY ISLAND.

North Coast of Ireland, on the North-west
Point of Tory Island.

Lat. 55° 16' 26" N., Long. 8° 13' W.

1. No local agent.
4. One light.
5. 1823.
6. Shipowners and Harbour Commissioners of Sligo.
7. As a prominent point of departure and landfall for vessels crossing the Atlantic; as a good position for a sea light, and turning point in navigation of the north-west coast of Ireland, and of the Sound between the island and the mainland.
8. 1839.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, not by contract.
10. Sea light.
11. Cutstone; solid walling; coated with inside cement. The tower is of circular form, coloured white.
12. No separate external conductor. The usual arrangement of wrought-iron handrail to form a continuous conductor from lantern to base of tower.
13. 87 feet.
14. 125 feet.
15. 12½ miles.
16. 17 miles.
17. 32° S.E. by S. to S.E. ½ E.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric. Dioptric apparatus has been prepared for this lighthouse, and will be erected during the present year.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus; burners adapted for use of rapeseed oil. Dioptric apparatus nearly ready; about to be substituted for the catoptric apparatus.
24. Reflectors from the Sahu Plate Company.
25. Ventilation through dome. There are also ventilators in the blocking and floor of lightroom to regulate the supply of air.
26. None used.
27. None.
28. 13 days.
29. 16,750l. 0s. 7d., including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high. 1,150l. (including cut stone blocking.)
32. Not purchased; erected by Corporation.
33. 3l. 2s. 4d. Not by contract.
34. Coated with paint once every year, 50l. 10s. 3d. Paints procured by contract; workmanship not by contract.
35. Two keepers; one at 64l. 12s. 4d., one at 46l. 3s.
36. 1,450l. total cost.
37. 1857, repairs, 37l. 7s. 10d.; cylinders, 7l. 4s.; cleaning stores, 3l. 7s. 1858, cylinders, 7l. 4s.; cleaning stores, 3l. 7s.
38. 1857, oil, 1,178 gallons; wicks, 16 gross. 1858, oil, 1,173 gallons; wicks, 16 gross.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon. 1858, 3s. 5d. per gallon.
40. Argand cotton wick. 1857, 3s. 6d. per gross; 2l. 16s. total cost. 1858, 3s. 6d. per gross; 2l. 16s. total cost.
41. None.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 81l. 13s. 9d. 1858, quarter, 40l. 1s. 1d. Total for 1852, 826l. 14s. 11d.
44. 1852, 543l. 8s. 1d., including boat attendance, freight of stores, &c. from Dublin. 1858, 478l. 18s., ditto.
45. None.

57. One keeper. Keeper changed from the station as changes from other lighthouses require and allow.

176.

INISTRAHULL.

North Coast of Ireland, on small Island off
North Coast, County Donegal.

Lat. 55° 25' 55" N., Lon. 7° 13' 37" W.

3. No local authority.
4. Only one light.
5. 1812.
6. At suggestion of Port of Dublin Corporation.
7. A sea light being requisite off that part of the north coast of Ireland previously unlighted; the evident usefulness of a light on the most northern position of Donegal, guiding past it with good effect.
8. 1812.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, not by contract.
10. Sea light.
11. Cut stone; solid walls; tower circular; coloured white; readily identified by its position on summit of the island.
12. No separate external conductor. Usual arrangement of wrought-iron handrail forming a continuous conductor from lantern to base of tower.
13. 45 feet.
14. 181 feet.
15. 15½ miles.
16. 19 miles.
17. 366°*F.* lighted all round.
18. Revolving. Light of natural appearance, white.
19. Bright light or flash appearing every two and a half minutes, the light gradually increasing and decreasing in strength.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in general character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company (Boulton and Watt.)
25. Through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None used.
27. None.
28. 23 days.
29. 10,850*l.* 8*s.* 4*d.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high. 1,080*l.* (including cut stone blocking, &c.)
32. Not purchased, erected by the Corporation.
*1*l.* 12*s.* 5*d.**
34. Coated with paint once every year, 38*l.* 7*s.* 9*d.* Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 6*l.* 12*s.* 4*d.*; one at 4*l.* 3*s.*
36. Light apparatus, 945*l.*; machine, 250*l.*; fitting, &c., 100*l.* Total, 1,295*l.*
37. 1857, cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 5*s.* 4*d.* 1858, repairs, 30*l.* 7*s.* 10*d.*; cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 5*s.* 4*d.*
38. 1857, oil, 800 gallons; wicks, 12 gross. 1858, oil, 801 gallons; wicks, 12 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 2*l.* 2*s.* total cost. 1858, 3*s.* 6*d.* per gross; 2*l.* 2*s.* total cost.
41. None.
42. From Mercantile Marine Fmnd. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 160*l.* 4*s.* 1858, quarter, 99*l.* 5*s.* 6*d.* Total for 1852, 640*l.* 16*s.* 1*d.*
44. 1852, 629*l.* 4*s.* 1*d.*, including boat attendance and freight of oil and stores from Dublin. 1858, 860*l.* 8*s.* 4*d.* ditto.
45. None.
46. None.
47. None.
48. No representation or complaint.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store adjoining lighthouse.
54. Barometer and thermometer.
55. Tide signals not used; not applied for.
56. Signal mast and flag. No night signals used.
57. Keeper on watch relieved in lightroom at 12 o'clock, midnight. Keepers are relieved from the station as changes from other stations require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

177.

INISHOWEN, WEST.

North Coast of Ireland, on Donagree Point, Inishowen Head.

Lat. and Lon. as stated in Special Return for Inishowen, East.

3. No local authority.
4. One light in western tower, distant from the outer or eastern lighthouse 153 yards, bearing
5. 1832.
6. Chamber of Commerce, Derry.
7. As guiding from seaward to Lough Foyle, lighting its entrance channel.
8. 1837.
9. Designed by the late George Halpin, Engineer to Port of Dublin Corporation; the walling built by contract by Mr. Pettigrew, of Dublin; the lantern erected by workmen of the Corporation.
10. Harbour light.
11. Material, cut stone; coated internally with cement and mortar; tower circular, coloured white; the two towers leading lights.
12. No separate external conductor. Usual arrangement of wrought-iron handrail of tower to form continuous conductor from lantern to base of tower.
13. 49 feet.
14. 67 feet.
15. 9½ miles.
16. 13 miles.
17. 60° N.E. by E. ½ E. to S.E. by E. ½ E.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night: from sunset to sunrise.
21. Catoptric.
22. 3rd order.
23. No alteration in general character of the light apparatus; burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company; wrought-iron frame, &c. by workmen of the Corporation.
25. Through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. None used.
27. None.
28. 29 days.
29. 87*½* 1*½*s. 3*d.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 18 feet diameter, 8 feet high. 75*0*l. (including cut stone blocking.)
32. Not purchased, erected by Corporation.
33. 1*6*l. 7*s.* 4*d.* This outlay chiefly on sea or shore defences of the premises.
34. Coated with paint once every year, 34*l.* 4*s.* Paints procured by contract; workmanship not by contract.
35. One keeper at 64*l.* 12*s.* 4*d.*
36. 1851, 25*l.* Total, 21*0*l.
37. 1857, cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 5*s.* 8*d.* 1858, repairs, 4*l.* 13*s.* 11*d.*; cylinders, 1*l.* 16*s.*; cleaning stores, 1*l.* 5*s.* 8*d.*
38. 1857, oil, 170 gallons. 1858, oil, 172 gallons.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wick. 1857, 3*s.* 6*d.* per gross. 1858, 3*s.* 6*d.* per gross.
41. None used.

45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store close to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; none have been applied for.
56. Signal mast and flag. No night signals.
57. One keeper at each of the two houses. Keepers are relieved from the station as changes at other lighthouses require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

179.

RATHLIN ISLAND, UPPER.
North Coast of Ireland, on North-east
Point of Rathlin Island.

Lat. 55° 18' 10" N., Lon. 6° 16' 45" W.

3. No local authority.
4. Two lights. Lower Light is outside and adjoining base of tower of the Upper Light.
5. 1827.
6. Commissioners of the Port of Londonderry.
7. A sea light being requisite on the western side of the entrance of the north channel; lighting also a prominent turning point in the navigation of the north-east coast of Ireland.
8. 1856.
9. Designed by George Halpin, Engineer to the Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, not by contract.
10. Sea light.
11. Cut stone; solid walling; tower of circular form, with a red belt; readily recognized by its position on the salient angle of the island, and by the lower light at base of the upper tower.
12. No separate external conductor. Usual arrangement of wrought-iron handrail to form continuous conductor from lantern to base of tower.
13. 88 feet.
14. 243 feet.
15. 17½ miles.
16. 22 miles.
17. 177 N.W. ½ N. to S.W. by S., and S.W. by W. ½ W. to W. ½ S.
18. Upper light is intermittent, showing a fixed white light during 50 seconds, and eclipsed during 10 seconds. The arrangement to produce eclipses of this light designed by the Engineer of the Port of Dublin Corporation.
19. Light appearing during 50 seconds, is suddenly eclipsed and obscured during 10 seconds, then reappears, and so on in the same order of succession.
20. During every night, from sunset to sunrise.
21. Dioptric.
22. 1st order.
23. No alteration in the description or character of the illuminating apparatus since lighted.
24. Dioptric apparatus made by Messrs. Chance, Brothers, of Birmingham. The machine, similar in arrangement to the machine of the intermittent light of St. John's Point and Minehead, was constructed by McMaster, of Dublin.
25. Ventilating tube continued from lamp through dome of lantern. Upper portion of tube not added until 1860.
26. None used.
27. None.
28. 15 days.
29. 7,649*l.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash, 13 feet diameter, 10 feet high. 904*l.*, including cut stone blocking.
32. Not purchased; erected by Corporation.
33. 1*l.* 15*s.* 3*d.*
34. Coated with paint once every year, 22*l.* Paints procured by contract; workmanship not by contract.
35. Three keepers; one at 64*l.* 15*s.* 3*d.*, two at 46*l.* 3*s.* each, of which half the cost chargeable to each light, or 78*l.* 9*s.* 2*d.* to upper light.
36. Dioptric apparatus, 1,218*l.* 14*s.*; machine, 132*l.* 10*s.* 2*d.*; 191*l.* 17*s.* Total, 1,483*l.* 14*s.* 2*d.*
37. 1857, cylinders, 4*l.* 4*s.*; cleaning stores, 2*l.* 6*s.* 10*d.* 1858, cylinders, 4*l.* 4*s.*; cleaning stores, 2*l.* 6*s.* 10*d.*
38. 1857, oil, 513 gallons; wicks, 34 gross. 1858, oil, 445 gallons; wicks, 34 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Cotton concentric wick. 1857, 2*l.* 5*s.* total cost. 1858, 2*l.* 5*s.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, not lighted. 1858, quarter, 120*l.* 19*s.* 8*d.*, total quarter's income for upper and lower lights, for which light dues are charged as for one light only.
44. 1852, not lighted. 1858, 581*l.* 14*s.* 11*d.*, including boat attendance, freight of stores, &c. from Dublin. Total expenditure for upper and lower lights.
45. None.
46. None.
47. None.
48. No complaint or representation as to the position of the light.
49. No complaint or representation as to the efficiency of the light.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. At least two spare lamp burners kept ready. Oil stored in oil store near to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; no application made to have them adopted.
56. Signal mast and flag. No night signals used.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers are changed from the station as changes from other lighthouses require and allow.

180.

RATHLIN ISLAND, LOWER.

North Coast of Ireland, on North-east
Point of Rathlin Island.

Lat. and Lon. as per statement in Special Return for Upper Lighthouse.

3. No local authority.
4. Two lights. Tower of the Upper Lighthouse adjoins base of lantern of Lower Light.
5. 1827.
6. Commissioners of the Port of Londonderry.
7. A sea light being requisite on the western side of the entrance of the north channel, lighting also a prominent turning point in the navigation of the north-east coast of Ireland. The second or lower light suggested by Trinity Board to form a certain means of identification of the position.
8. 1856.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation and Superintendent of Lighthouses, and built under his direction by the workmen of the Corporation, not by contract.
10. Sea light.
11. Cut stone, base and floor. The lightroom blocking of cast iron. The prominent position of the two lights (upper and lower) give means of identification.
12. No separate external conductor. The lower lantern forms a continuous conductor from vane to base of lighthouse.
13. 88 feet.
14. 243 feet.
15. 17½ miles.
16. 20 miles.
17. 118 N.W. by N. to S.S.W. ½ W.
18. Lower light fixed. The light of the natural appearance, white.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Dioptric.
22. 1st order.
23. No alteration in the description or character of the illuminating apparatus since lighted.
24. Dioptric apparatus made by Messrs. Chance, Brothers, of Birmingham.
25. Ventilating tube continued from lamp through dome of lantern. Upper portion of tube not added until 1860.
26. None used.
27. None.
28. 15 days.
29. 7,600*l.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash, 13 feet diameter, 10 feet high. 887*l.*, including cast iron blocking and cut stone base.
32. Not purchased; erected by Corporation.
33. 1*l.* 15*s.* 3*d.*
34. Coated with paint once every year, 13*l.* 1*s.* 6*d.* Paints procured by contract; workmanship not by contract.
35. Three keepers; one at 64*l.* 15*s.* 3*d.*, two at 46*l.* 3*s.* each, of which half the cost chargeable to each light, or 78*l.* 9*s.* 2*d.* for each.
36. Dioptric apparatus, 1,017*l.* 16*s.*; 85*l.* Total cost, 1,102*l.* 16*s.*
37. 1857, cylinders, 4*l.* 4*s.*; cleaning stores, 2*l.* 6*s.* 10*d.* 1858, cylinders, 4*l.* 4*s.*; cleaning stores, 2*l.* 6*s.* 10*d.*
38. 1857, oil, 513 gallons; wicks, 34 gross. 1858, oil, 445 gallons; wicks, 34 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Cotton concentric wick. 1857, 2*l.* 5*s.* total cost. 1858, 2*l.* 5*s.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, not lighted. 1858, income included in amount stated in Special Return for Upper Lighthouse.
44. 1852, not lighted. 1858, total expenditure for year 1858, for Upper and Lower Lights, stated in Special Return for Upper Light.
45. None.
46. None.
47. None.
48. No complaint or representation as to the position of the light.
49. No complaint or representation as to the efficiency of the light.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. At least two spare lamp burners kept ready. Oil stored in oil store near to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; no application made to have them adopted.
56. Signal mast and flag. No night signals used.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers are changed from the station as changes from other lighthouses require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

181.

MAIDEN'S ROCKS, NORTH.

East Coast of Ireland, on the Northern (or Western) Maiden's Rock, off East Coast, County Antrim.

Lat. 54° 55' 47" N., Lon. 5° 45' W.

3. No local authority.
4. One light, distant from light on South Maiden's Rock 824 yards, bearing S.E. by E.
5. 1817.
6. Admiral Hollowell in 1817; merchants of Larne in 1818; second light at suggestion of the Corporation.
7. The fitness of the position for a sea light, placed on a rock $4\frac{1}{2}$ miles distant from the east coast of Antrim; it marks the western side of the cluster of rocks; guides along the western side of St. George's Channel with a good offing from the coast.
8. 1828.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation, and built under his supervision by the workmen of the Corporation, not by contract.
10. Sea light.
11. Material, cut stone; solid wall, coated inside with cement; tower circular, coloured white, marked with a broad red belt.
12. No external conductor. Usual arrangement of wrought-iron handrail of tower, forming a conductor from lantern to base of tower.
13. 68 feet.
14. 84 feet.
15. $10\frac{1}{2}$ miles.
16. 14 miles.
17. 360°. Lighted all around.
18. Fixed. The light of the natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration beyond alteration of the burners to suit them for use with rapeseed oil, made at suggestion of the engineer of the Corporation. It has been the intention of the Corporation to change the apparatus to dioptric at this and several of the other catoptric lights of the 1st order.
24. Reflectors from Suho Plate Company.
25. Ventilation through dome. There are also ventilators in the floor and blocking of lightroom to regulate supply of air.
26. None used.
28. 14 days.
29. 18,56*l.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 3 feet high. 1,115*l.* (approximate) including stone blocking.
32. Not purchased; erected by Port of Dublin Corporation.
33. 13*l.* 7*s.*
34. General coat of painting once in each year, 53*l.* 6*s.* Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 6*l.* 12*s.* 4*d.*, one at 46*l.* 3*s.*
36. 1,134*l.* (approximate).
37. 1857, repairs, 25*l.* 8*s.* 2*d.*; cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 9*s.* 4*d.*. 1858, repairs, 36*l.* 7*s.* 1*d.*; cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 9*s.* 4*d.*. Apparatus did not require repairs in 1856 or 1859.
38. 1857, oil, 861 gallons; wicks, 14 gross. 1858, oil, 868 gallons; wicks, 14 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 2*l.* 9*s.* total cost. 1858, 3*s.* 6*d.* per gross; 2*l.* 9*s.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected as per statement in Special Return No. 1.
43. 1852, quarter, 418*l.* 14*s.* 11*d.*. 1858, quarter, 144*l.* 2*s.* 10*d.*. Total for 1852, 1,674*l.* 19*s.* 9*d.*
44. 1852, 617*l.* 13*s.* 10*d.*, including freight of stores, attendance of hooker, &c. 1858, 563*l.* 0*s.* 5*d.*, ditto.
45. None.
46. None.
47. None.
48. None.
49. None; on the contrary, a general admission as to the position being very suitable.
50. None.
51. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
52. On circuit of inspection in 1857; ditto, 1858.
53. Not known to have been extinguished.
54. At least one lamp and burner always kept ready. From the strength and simplicity of the lamps and burners used they are not liable to injury more than gradual wear. The oil is stored in the oil store close to the lighthouse.
55. Barometer and thermometer.
56. No tide signals used; none applied for; none requisite, owing to the distance from any tidal navigation of harbour.
57. Signal mast and flag. No means of communicating by signals at night.
58. Keeper on watch in lightroom relieved at 12 o'clock, midnight. Keepers are relieved from the station as removals from other station allow.

182.

MAIDEN'S ROCK, SOUTH.

East Coast of Ireland, on Rock off East Coast of County Antrim.

Lat. 54° 55' 49" N., Lon. 5° 44' 20" W.

3. No local authority.
4. One light, distant from the light on the North Maiden's Rock 824 yards, bearing N.W. by W.
5. 1817.
6. Admiral Hollowell in 1817; merchants of Larne in 1818; second light at suggestion of Corporation.
7. Its obvious fitness as an excellent position for a sea light, placed on a rock $4\frac{1}{2}$ distant from the mainland; it marks the cluster of rocks named the "Maiden's Rocks;" guides through the western side of St. George's Channel with good offing from the east coast of Antrim.
8. 1828.
9. Designed by the late George Halpin, Engineer to Port of Dublin Corporation, and built under his supervision by the workmen of the Corporation, and not by contract.
10. Sea light.
11. Material, cut stone; solid wall, coated inside with cement; tower circular, coloured white, marked with a 'broad red belt.'
12. No external conductor. Usual arrangement of wrought-iron handrail of tower, forming a conductor from lantern to base of tower.
13. 76 feet.
14. 94 feet.
15. 11 miles.
16. 15 miles.
17. 360°. Lighted all around.
18. Fixed. The light of the natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration beyond alteration of the burners to suit them for use with rapeseed oil, made at suggestion of the engineer of the Corporation. It has been the intention of the Corporation to change the apparatus to dioptric at this and several of the catoptric lights of the 1st order.
24. Reflectors from Suho Plate Company.
25. Ventilation through dome. There are also ventilators in the floor and blocking of lightroom to regulate supply of air.
26. None used.
27. None.
28. 16 days.
29. 18,526*l.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 3 feet high. 1,115*l.* (approximate) including stone blocking.
32. Not purchased erected; by Port of Dublin Corporation.
33. 13*l.* 7*s.*
34. General coating of paint once in each year, 53*l.* 6*s.* Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 6*l.* 12*s.* 4*d.*, one at 46*l.* 3*s.*
36. 1,134*l.* (approximate).
37. 1857, repairs, 25*l.* 16*s.* 5*d.*; cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 9*s.* 4*d.*. 1858, repairs, 33*l.* 7*s.* 5*d.*; cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 9*s.* 4*d.*
38. 1857, oil, 1,072 gallons; wicks, 15 gross. 1858, oil, 1,075 gallons; wicks, 15 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 2*l.* 12*s.* 6*d.* total cost. 1858, 3*s.* 6*d.* per gross; 2*l.* 12*s.* 6*d.* total cost.
41. None used.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 418*l.* 14*s.* 11*d.*. 1858, quarter, 144*l.* 2*s.* 10*d.*. Total for 1852, 1,674*l.* 19*s.* 9*d.*
44. 1852, 617*l.* 13*s.* 10*d.*, including freight of stores, attendance of hooker, &c. 1858, 563*l.* 0*s.* 5*d.*, ditto.
45. None.
46. None.
47. None.
48. None; on the contrary, a general admission as to the position being very suitable.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. At least one lamp and burner always kept ready. From the strength and simplicity of the lamps and burners used they are not liable to injury more than gradual wear. The oil is stored in the oil store close to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; none applied for; none requisite, owing to the distance from any tidal harbour or navigation.
56. Signal mast and flag. No means of communicating by signals at night.
57. Keeper on watch in lightroom relieved at 12 o'clock, midnight. Keepers are changed from the station as changes from other stations require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

183.

LARNE LOUGH.

East Coast of Ireland, on Farres's Point, on East Side of Entrance to Harbour.

Lat. 54° 51' N., Long. 5° 48' W.

3. No local authority.
4. One light.
5. 1831.
6. Merchants of Larne, and others.
7. As guiding from seaward to Larne Harbour, and through its entrance passage.
8. 1839.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation, and built by the workmen of the Corporation, not by contract.
10. Harbour light.
11. Cut stone; solid wall; coated inside with cement. Tower circular, painted white.
12. Usual arrangement of wrought-iron handrail, forming continuous conductor from lantern to base of tower.
13. 50 feet.
14. 42 feet.
15. 7 miles.
16. 12 miles.
17. 260° E. by N. $\frac{1}{2}$ N. to S. $\frac{1}{2}$ E.
18. Fixed.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 2nd order.
23. No alteration in the description or character of the illuminating apparatus; burners adapted for use of rapeseed oil.
24. Parabolic reflectors, by the Soho Plate Company. Wrought-iron frame by the workmen of the Corporation.
25. Through dome. There are also ventilators in the blocking and floor of lantern to regulate the supply of air.
26. None used.
27. None.
28. 17 days.
29. 7,35*l.* 18*s.* 3*d.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high. 547*l.* (including cut stone blocking).
32. Not purchased; erected by Corporation.
33. 3*l.*
34. Coated with paint once every year, 26*l.* 15*s.* 5*d.* Paints procured by contract; workmanship not by contract.
35. One keeper at 64*l.* 12*s.* 4*d.*
36. 347*l.*; 75*l.* Total, 422*l.*
37. 1857, repairs, 11*l.* 10*s.* 4*d.*; cylinders, 2*l.* 14*s.*; cleaning stores, 1*l.* 3*s.* 8*d.* 1858, repairs, 13*l.* 12*s.* 5*d.* (none in 1856 or 1859); cylinders, 2*l.* 14*s.*; cleaning stores, 1*l.* 3*s.* 8*d.*
38. 1857, oil, 337 gallons; wicks, 6 gross. 1858, 349 gallons; wicks, 6 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 1*l.* 1*s.* total cost. 1858, 3*s.* 6*d.* per gross; 1*l.* 1*s.* total cost.
41. None used.

44. 1854, 230*l.* 17*s.* 4*d.*, including freight of stores, ferrage, &c. 1858, 191*l.* 6*s.* 10*d.*, ditto.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store near to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; no application made to the Corporation to have them adopted.
56. Signal mast and flag. No means for communicating by signals by night.
57. One keeper. Keeper relieved from the station as changes at other stations allow.

184.

COPELAND ISLAND.

East Coast of Ireland, on Summit of smaller Copeland Island, off South-east Side Entrance to Belfast Lough.

Lat. 54° 41' 44" N., Lon. 5° 32' 1" W.

3. No local authority.
4. Only one light.
5. Not ascertained; the old light having been transferred from the Revenue Board in 1810.
6. Not ascertained.
7. Selected by the Revenue Board as sea light, being requisite in the locality to guide vessels navigating the east side of St. George's Channel, or thence passing into or out of Belfast Lough or Donaghadee Sound.
8. 1796, date of first exhibition of light in old building, now used as a store and belfry.
9. Present lighthouse designed by the late George Halpin, Engineer to Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, and not by contract.
10. Sea light.
11. Stone tower, solid wall, without separate inner wall. The tower is circular, painted white, and is known also from its position on summit of the lighthouse island.
12. No separate external conductor. Wrought-iron handrail arranged to form a continuous conductor from lantern to base of tower.
13. 52 feet.
14. 131 feet.
15. 13 miles.
16. 17 miles.
17. 360°, lighted all around.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus since erection of the present lighthouse; burners adapted for use of rapeseed oil.
24. Reflectors from Soho Plate Company.
25. As in other catoptric lights, through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. Large fog bell struck by machinery.
27. 26 days.
28. 26 days.
29. 9,651*l.* 17*s.* 6*d.* (present lighthouse), including cost of lantern, light apparatus, &c. (outlay 1813 to 1816 inclusive.)
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high, 1,002*l.* (including cut stone blocking)
32. Not purchased, erected by Corporation.
33. 1*l.* 14*s.* 5*d.*
34. Coated with paint once every year, 55*l.* Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 64*l.* 12*s.* 4*d.*; one at 46*l.* 3*s.*
36. 1,215*l.* total cost.
37. 1857, cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 7*s.* 4*d.* 1858, repairs, 15*l.* 19*s.* 2*d.*; cylinders, 7*l.* 4*s.*; cleaning stores, 2*l.* 7*s.* 4*d.*
38. 1857, oil, 1,090 gallons; wicks, 16 gross. 1858, oil, 1,089 gallons; wicks, 16 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 2*l.* 16*s.* total cost. 1858, 3*s.* 6*d.* per gross; 2*l.* 16*s.* total cost.
41. Fog bell, 230*l.*; machine, 170*l.*; belfry, &c., 130*l.* Total, 550*l.*
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 527*l.* 13*s.* 1*d.* 1858, quarter, 181*l.* 6*s.* Total for 1852, 2,110*l.* 12*s.* 1*d.*
44. 1852, 503*l.* 0*s.* 1*d.*, including boat attendance, freight of stores, &c. 1858, 557*l.* 14*s.* 3*d.*, ditto.
45. None.
46. None.
47. None.
48. Belfast Harbour Commissioners represent their opinion that the light would be more useful if placed on the Mew Island, 12th August 1859. Subject brought under notice of the Trinity Board.
49. Complaint made that the light had not been visible during fog on . . . On investigation this was disproved.
50. By Committee of Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. The light has not been known to have been extinguished at any time during night.
53. Spare lamp and burner kept ready. Oil stored in oil store near to lighthouse.
54. Barometer and thermometer.
55. Tide signals are not used; none have been applied for.
56. Signal mast and flag. No night signals used.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers are changed from the stations as removals from other lighthouses require and allow.

185.

DONAGHADEE.

East Coast of Ireland, on Southern Pier-head, Donaghadee Harbour.

Lat. 54° 38' 4" Lon., 52° 32' 1" W.

3. No local authority.
4. One light.
5. Determined on when the harbour was planned for the post office packet service.
6. The engineer of the harbour proposed the lighthouse as necessary on the pierhead.
7. As lighting the east side of the channel of Donaghadee Sound, and leading into the harbour. After erection of the tower the lighthouse was transferred by the Government to the Port of Dublin Corporation.
8. 1836.
9. Designed by the late John Rennie, C.E., engineer of the harbour, and built by contract for the Government.
10. Harbour light.
11. Cut stone; solid wall; coated with cement inside; tower circular.
12. No separate external conductor.
13. 53 feet.
14. 56 feet.
15. 8½ miles.
16. 12 miles (uncoloured sector of light).
17. 360° all around.
18. Fixed. Light coloured red to seaward, from N. by E. to S. ½ E., and of the natural appearance, white, towards the harbour and entrance of Belfast Bay.
19. Fixed.
20. During every night, from sunset to sunrise.
21. Catoptric.
22. 3rd order.
23. No alteration in the general character of the light; burners adapted to the use of rapeseed oil.
24. De Ville, of London.
25. Through dome.
26. None used; none applied for at the harbour lighthouse.
27. None.
28. 13 days.
29. Improvements, 1,300*l*.
30. Finished.
31. Not ascertained; tower having been transferred by Government.
32. Not purchased; transferred.
33. 2*s*.
34. Coated with paint once every year, 12*l*. 12*s*. 10*d*. Paints procured by contract; workmanship not by contract.
35. One keeper, at 64*l*. 12*s*. 4*d*.
36. 415*l*. total cost.
37. 1857, cylinders, 2*l*. 2*s*, cleaning stores, 1*l*. 8*s*. 11*d*. 1858, repairs, 6*l*. 13*s*. 5*d*.; cylinders, 2*l*. 2*s*.; cleaning stores, 1*l*. 8*s*. 11*d*.
38. 1857, oil, 365 gallons; wicks, 7 gross. 1858, oil, 370 gallons; wicks, 7 gross.
39. Pale rapeseed oil. 1857, 4*s*. 2½*d*. per gallon. 1858, 3*s*. 5*d*. per gallon.
40. Argand cotton wick. 1857, 3*s*. 6*d*. per gross; 1*l*. 4*s*. 6*d*. total cost. 1858, 3*s*. 6*d*. per gross; 1*l*. 4*s*. 6*d*. total cost.
41. None.
42. From Mercantile Marine Fund.
43. No light dues charged.
44. 1852, 197*l*. 3*s*., including cost of freight of stores from Dublin. 1858, 161*l*. 12*s*. 8*d*., ditto.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in tower.
54. Barometer and thermometer.
55. None used. No requisition made to have tide signals used.
56. Signal mast and flag. No night signals.
57. One keeper. Keeper relieved from the station as changes at other lighthouses require and allow.

186.

SOUTH ROCK.

East Coast of Ireland, on Tidal Rock off East Coast of Co. Down.

Lat 54° 23' 55" N., 5° 25' 4" W.

3. No local authority.
4. Only one light.
5. Not ascertained; transferred by the Revenue Board.
6. Not ascertained.
7. The necessity for a sea light in the position, as one of the chain of lights to guide vessels along the west coast of the Irish Channel with sufficient offing from the projecting coast of Co. Down, and to indicate the tidal rock on which it is built, and the neighbouring rocks and shoals.
8. 1837.
9. Designed by Mr. Rogers, Engineer to the Revenue Board, by whom the lighthouse was transferred to the Port of Dublin Corporation.
10. Sea light.
11. Cut stone tower.
12. No separate external conductor.
13. 66 feet.
14. 32 feet.
15. 8 miles.
16. 12 miles.
17. 360°. Lighted all round the circle.
18. Revolving. The light of natural appearance, white.
19. A bright light or flash appears every minute and half, the light gradually increasing and decreasing in strength.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 2nd order.
23. No alteration in general description or character. Lamps and burners altered for use with rapeseed oil at suggestion of Engineer to Port of Dublin Corporation.
24. Greenside and Co., Edinburgh.
25. Ventilation through dome; also ventilation in blocking and floor of lightroom to regulate supply of air.
26. Fog bells struck by machinery.
27. None.
28. None.
29. 18,031*l*. 9*s*. 5*d*., including lantern, light apparatus, three dwelling-houses, and shore establishment at Newcastle, Co. Down, and improvements of buildings.
30. Finished.
31. Lantern sash feet diameter, 6 feet high; 950*l*. estimated cost (including cut stone blocking).
32. Not purchased; transferred by the Revenue Board to Port of Dublin Corporation.
33. 4*l*. 3*s*. 6*d*.
34. Coated once each year, 44*l*. 2*s*. 11*d*. Paints procured by contract; workmanship not by contract.
35. Three keepers, one at 64*l*. 12*s*. 4*d*. per annum; two at 46*l*. 3*s*.
36. 750*l*. estimated cost.
37. 1857, cylinders, 4*l*. 10*s*.; cleaning stores, 2*l*. 9*s*. 4*d*. 1858, repairs, 18*l*. 11*s*. 8*d*.; cylinders, 4*l*. 10*s*.; cleaning stores, 5*l*. 9*s*. 4*d*.
38. 1857, oil, 461 gallons; wicks, 9 gross. 1858, oil, 466 gallons; wicks, 9 gross.
39. Pale rapeseed oil. 1857, 4*s*. 2½*d*. per gallon. 1858, 3*s*. 5*d*. per gallon.
40. Argand cotton wicks. 1857, 3*s*. 6*d*. per gross; 1*l*. 11*s*. 6*d*. total cost. 1858, 3*s*. 6*d*. per gross; 1*l*. 11*s*. 6*d*. total cost.
41. Not ascertained.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 368*l*. 19*s*. 1*d*. 1858, quarter, 155*l*. 1*s*. 10*d*. Total for 1852, 1,475*l*. 16*s*. 5*d*.
44. 1852, 552*l*. 8*s*. 10*d*. 1858, 460*l*. 19*s*. 1*d*.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in cisterns in the lighthouse.
54. Barometer and thermometer.
55. No tide signals used at this station.
56. No means of communicating signals by night.
57. Keeper on watch relieved in lighthouse at 12 o'clock, midnight. One keeper in turn relieved from rock each fortnight (weather permitting), and keepers are removed from the station as changes from other stations admit.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

187.

ARDGLASS.

East Coast of Ireland, Upper Room of Building, Inner Shore of Harbour.

3. No local authority.
4. One light.
5. 1812.
6. Mr. O'Gilvie.
7. Site of first lighthouse erected at Ardglass was selected as a suitable position for light on that part of the coast previously to the establishment of St. John's Point Light, and to light the approach to the harbour.
8. 1816, position changed in 1851.
9. Stone previously built for exhibition of temporary light.
10. Harbour light.
11. Rubble walling and brick.
12. No conductor.
13. 19 feet.
14. 17 feet.
15. miles.
16. miles.
18. Fixed; light coloured red.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 6th order.
24. Reflector from the Soho Plate Company.
25. Through roof of lantern.
26. None used.
27. None.
28. None.
29. Cost of building hired for temporary light not ascertained. Cost of dwelling (which appertained to the lighthouse first erected) about 400*l*.
31. Present temporary apparatus 50*l*.
32. Not purchased.
33. 10*s*. 11*d*., chiefly for repairs.
34. 8*s*. 8*d*. 1*d*. Paints procured by contract; workmanship not by contract.
35. One keeper at 46*l*. 3*s*.
36. Present temporary apparatus 50*l*.
37. 1857, cylinders, 18*s*.; cleaning stores, 10*s*. 10*d*. 1858, repairs, 2*l*. 8*s*.; cylinders, 18*s*.; cleaning stores, 10*s*. 10*d*.
38. 1857, oil, 60 gallons; wicks, 1 gross. 1858, oil, 60 gallons; wicks, 1 gross.
39. Pale rapeseed oil. 1857, 4*s*. 2½*d*. per gallon. 1858, 3*s*. 5*d*. per gallon.
40. Argand cotton wicks. 1857, 3*s*. 6*d*. per gross. 1858, 3*s*. 6*d*. per gross.
41. None used.
42. From Mercantile Marine Fund.
43. 1852, quarter, 4*l*. 0*s*. 11*d*. 1853, quarter, 8*d*. Total for 1852, 16*l*. 3*s*. 6*d*.
44. 1852, 186*l*. 4*s*. 1*d*., including cost of freight of stores, &c. from Dublin. 1853, 93*l*. 12*s*. 3*d*.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Port of Dublin Corporation and Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store.
54. None in 1858.
55. No tide signals used.
56. No night signals used.
57. One keeper.

188.

ST. JOHN'S POINT.

East Coast of Ireland, North Side of Dundrum Bay.

Lat. 54° 13' 10" N., Lon. 5° 40' W.

3. No local authority.
4. One light.
5. 1825.
6. Marquis of Downshire.
7. Being a prominent position, where a sea light was requisite, guiding seamen in keeping an offing from Dundrum Bay, and from the coast northward of the point.
8. 1844.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation; the tower and dwellings built by contract by Captain Browne of St. John's Point; the lantern erected by workmen of the Corporation.
10. Sea light.
11. Cut stone; circular tower, painted white; blocking under lantern sash and projecting gallery are coloured brown.
12. No external conductor. Usual arrangement of wrought-iron handrail to form continuous conductor from lantern to base of tower.
13. 73 feet.
14. 62 feet.
15. 9 miles.
16. 13 miles.
17. 203° E. ½ N. to W. by N. ½ N.
18. Intermittent. Light of natural appearance, white, to be coloured red.
19. Light visible during 45 seconds, and eclipsed during 15 seconds. The arrangement to produce eclipses of this light designed by the Engineer of the Port of Dublin Corporation.
20. During every night from sunset to sunrise.
21. Dioptric (catadioptric), curved metallic reflectors being set in tiers above and below dioptric belt.
22. 1st order.
23. Not altered since 1845.
24. Refractors and tier of reflectors manufactured by Cookson, of Newcastle; the frame and lamps by Wilkins, of London.
25. Ventilating tube continued through centre of dome. (Faraday's) tube in this and in the other dioptric lights of the Port of Dublin Corporation.
26. None at this station.
27. None.
28. 9 days.
29. 11,091*l*. 1*s*., including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high; 1,055*l*, including cut stone blocking.
32. Not purchased; erected by the Corporation.
33. 4*l*. 6*s*. 8*d*.
34. General coating of paint once in each year, 45*l*. 19*s*. 3*d*. Paints procured by contract; workmanship not by contract.
35. Two keepers, one at 64*l*. 12*s*. 4*d*., one at 46*l*. 3*s*.
36. 1,096*l*.; 153*l*.; 1,00*l*. Total, 1,552*l*.
37. 1857, cylinders, 4*l*. 4*s*.; cleaning stores, 2*l*. 5*s*. 4*d*. 1858, repairs, 4*l*. 12*s*. 4*d*.; cylinders, 4*l*. 4*s*.; cleaning stores, 2*l*. 5*s*. 4*d*.
38. 1857, oil, 404 gallons; wicks, 3¼ gross. 1858, oil, 392 gallons; wicks, 3¼ gross.
39. Pale rapeseed oil. 1857, 4*s*. 2½*d*. per gallon. 1858, 3*s*. 5*d*. per gallon.
40. Cotton concentric wicks. 1857, 2*l*. 5*s*. total cost. 1858, 2*l*. 5*s*. total cost.
41. None.
42. Light maintained from Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 395*l*. 2*s*. 8*d*. 1858, quarter, 110*l*. 10*s*. 5*d*. Total for 1852, 1,580*l*. 10*s*. 10*d*.
44. 1852, 420*l*. 2*s*. 7*d*., including freight of stores, &c. 1858, 291*l*. 1*s*. 3*d*., ditto.
45. None.
46. None.
47. None.
48. None.
49. None.
50. By Committee of the Port of Dublin Corporation and Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 858.
52. Not known to have been extinguished during night between 1848 and 1858.
53. At least two spare burners kept in readiness.
54. Barometer and thermometer.
55. Tide signals are not used.
56. Signal mast and flag. No means of communicating signals by night.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight. Keepers changed from the station as changes from other stations require and allow.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

189.

CARLINGFORD.

East Coast of Ireland, on Haulboline Tidal Rock.

Lat. 54° 1' N., Lon. 6° 5' W.

3. No local authority.
4. One main light shown constantly during night; there is also in the same tower a half-tide light placed below the other, shown at and after half-flood.
5. 1819.
6. Shipowners of Newry.
7. To serve as a sea light on that part of the coast of Down, and to guide from seaward to the bar and through the entrance channel into Carlingford Lough; also to mark the tidal low-water rock on which it stands, and the rocky shoals in the vicinity.
8. 1823.
9. Designed by the late George Halpin, Engineer to the Port of Dublin Corporation. Built under his direction by the workmen of the Corporation, and not by contract.
10. Sea light.
11. Cut stone tower, solid walls; the tower is circular, painted white; readily identified as a shaft of masonry standing in the sea; the rock uncovers only at the low water of spring tides.
12. No separate or external lightning conductor.
13. 3 feet.
14. 101 feet.
15. 12½ miles.
16. 17 miles.
17. 225° S.S.E. to W.N.W.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. Main light in the lantern is shown during every night from sunset to sunrise. The lower tide light in same tower is shown from half-flood to half-ebb.
21. Catoptric.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus. Burners adapted for use of rapeseed oil.
24. Reflectors from the Noho Plate Company.
25. Through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. Two fog bells struck by machinery.
27. 9 days.
28. 9 days.
29. 28,396*l.* 17*s.* 3*d.* (to year 1826 inclusive), including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 13 feet diameter, 8 feet high. 1,150*l.* approximate total cost.
32. Not purchased; erected by Corporation.
33. 22*l.* 4*s.* (This outlay nearly altogether for repairs of the shore dwellings at Cranfield Point.)
34. Coated with paint once every year, 63*l.* 12*s.* 2*d.* Paints procured by contract; workmanship not by contract.
35. Three keepers, one at 64*l.* 12*s.* 3*d.*, two at 46*l.* 3*s.*
36. 1,560*l.*
37. 1857, repairs, 17*l.* 12*s.* 3*d.*; cylinders, 8*l.* 2*s.*; cleaning stores, 3*l.* 5*s.* 1858, repairs, 6*l.* 1*s.* 5*d.*; cylinders, 8*l.* 2*s.*; cleaning stores, 3*l.* 5*s.*
38. 1857, oil, 571 gallons; wicks, 16 gross. 1858, oil, 987 gallons; wicks, 16 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 2*l.* 16*s.* total cost. 1858, 3*s.* 6*d.* per gross; 2*l.* 16*s.* total cost.
41. 550*l.* probable cost.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 412*l.* 0*s.* 6*d.* 1858, quarter, 129*l.* 11*s.* 11*d.* Total for 1852, 1,648*l.* 2*s.* 1*d.*
44. 1852, 637*l.* 17*s.*, including boat attendance, freight of stores from Dublin. 1858, 505*l.* 1*s.* 10*d.*, ditto.
45. None.
46. None.
47. None.
48. No representation or complaint as to the position of the light.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished. The catoptric lamps are not liable to accidental extinction, unless through damage, which would destroy the lantern sash.
53. Spare lamp and burner kept ready. Oil for use kept in the lighthouse.
54. Barometer and thermometer.
55. There is a half-tide light shown during night from half-flood to high water and to half-ebb, and during day a large ball is hoisted on a metal shaft (above the lantern) from half-flood to half-ebb.
56. Signal mast and flag. No night signals used. none applied for.
57. Keeper on watch relieved in the lightroom at 12 o'clock, midnight, and the keepers are removed from the station as changes from other lighthouses require and allow.

190.

CARLINGFORD LOUGH.

East Coast of Ireland, on Greenore Point.

Lat. 54° 1' 55" N., Lon. 6° 7' 52" W.

3. No separate local agent, lightkeeper acting as at other stations.
4. One light.
5. 1827.
6. Chamber of Commerce, Newry.
7. To form with the Carlingford outer lighthouse leading marks to clear outer dangers; also serving as an inner harbour light.
8. 1830.
9. Designed by the late George Halpin, Engineer to Port of Dublin Corporation, and built under his supervision by workmen of the Corporation, and not by contract.
10. Harbour light.
11. Stone tower; solid wall; coated inside with cement; coloured white outside. Identified by circular form of tower and prominent position on Greenore Point.
12. Wrought-iron handrail in tower forms a continuous conductor from lantern to base. No separate external conductor.
13. 41 feet.
14. 29 feet.
15. 6 miles.
16. 9 miles.
17. 225° S.S.E. to W.N.W.
18. Revolving.
19. Every 45 seconds.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 3rd order.
23. No alteration in the general description or character of the illuminating apparatus since 1845.
24. Reflectors from Noho Plate Company.
25. Ventilation through dome; also ventilation in blocking and floor of lightroom to regulate supply of air.
26. No fog signals at this station.
27. None.
28. None.
29. 5,207*l.* 12*s.* 3*d.*, including cost of lantern, light apparatus, &c.
30. Finished.
31. 724*l.* (including stone blocking).
32. Not purchased; erected by workmen of the Corporation.
33. 4*l.* 10*s.* 7*d.*
34. General coating of paint once in each year, 26*l.* Paints procured by contract; workmanship not by contract.
35. One keeper at 64*l.* 12*s.* 4*d.*
36. 396*l.* 11*s.*; 128*l.* 10*s.* Total, 525*l.* 1*s.*
37. 1857, repairs, 6*l.* 9*s.* 1*d.*; cylinders, 2*l.* 14*s.*; cleaning stores, 1*l.* 1*s.* 8*d.* 1858, repairs, 12*l.* 12*s.* 7*d.*; cylinders, 2*l.* 14*s.*; cleaning stores, 1*l.* 1*s.* 8*d.*
38. 1857, oil, 246 gallons; wicks, 5 gross. 1858, oil, 256 gallons; wicks, 5 gross.
39. Pale rapeseed oil. 1857, 4*s.* 2½*d.* per gallon. 1858, 3*s.* 5*d.* per gallon.
40. Argand cotton wicks. 1857, 3*s.* 6*d.* per gross; 17*s.* 6*d.* total cost. 1858, 3*s.* 6*d.* per gross; 17*s.* 6*d.* total cost.
41. No fog signals at this lighthouse; fog bells at the outer lighthouse.
42. Light maintained from Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 4.
43. 1852, quarter, 44*l.* 6*s.* 1*d.* 1858, quarter, 10*l.* 3*s.* 9*d.* Total for 1852, 177*l.* 4*s.* 5*d.*
44. 1852, 202*l.* 7*s.* 2*d.*, including freight of stores, &c. 1858, 214*l.* 9*s.* 10*d.*, ditto.
45. None.
46. None.
47. None.
48. There has not been any representation or complaint as to the light being unnecessary or in an unsuitable position.
49. No complaint or representation as to the efficiency of the light.
50. By Committee of the Port of Dublin Corporation and by Superintendent of Lighthouses.
51. On circuit of inspection in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. One spare lamp and burner kept in readiness. Oil stored in oil store close to lighthouse.
54. None in 1858.
55. No tide signals used at this station, half tide signals being made visible in view of it at the outer Carlingford lighthouse.
56. Signal mast and flag.
57. One keeper; changed from the station to meet arrangement of changes of keepers from other stations.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

191.

DUNDALK.

East Coast of Ireland, North Side of Channel within the Bar.

Lat. 53° 58' 40" N., Lon. 6° 18' W.

3. No agent or local authority, lightkeepers communicating with Ballast Office.
4. One light.
5. 1846.
6. Dundalk Harbour Commissioners.
7. To guide vessels from sea to bar channel through channel near to lighthouse, and in the reach westward of the lighthouse.
8. 1855.
9. Designed by George Halpin, Engineer to Port of Dublin Corporation. Screw piles and keeper's dwelling were built under contract by Mr. Mitchell, the inventor and patentee of screw piles. The lantern erected by workmen of the Corporation.
10. Harbour light.
11. Sheet iron house of octagonal form, borne on nine wrought iron piles, which are coloured red, readily recognised by the open appearance of the screw piles, which are spaced apart in the angles of octagon.
12. The whole lighthouse forms a large continuous conductor, the lantern of metal, the dwelling of sheet iron, bearing on wrought iron piles set in the north side of channel.
13. 72 feet from base screws to vane; height from surface of sand to vane varies as the sand shifts.
14. 33 feet.
15. 6½ miles.
16. 9 miles.
17. Ranges of light, 85°, bright to seaward; 146°, red to west side of bay; 22°, bright to harbour channel. Screened in direction of Dunany reefs.
18. Flashing. The light is coloured red towards west side of Dundalk Bay; of natural appearance, or white, to seaward.
19. Bright flash every 15 seconds.
20. During every night, from sunset to sunrise.
21. Dioptric.
22. 4th order.
23. No alteration in the description or character of the illuminating apparatus found necessary or suggested.
24. Wilkins, of Long Acre, London.
25. Tube through centre of dome. Ventilation in blocking or pedestal of lightroom, to regulate supply of air.
26. Some progress made under contract for supplying fog bell and machine for this lighthouse.
27. None.
28. 12 days.
29. 6,083l. 3s. 5d., including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash 8 feet diameter, 4 feet high; 151l
32. Erected by Port of Dublin Corporation, not purchased.
33. None.
34. General coating of paint once each year, 20l. 16s. 8d. Paints procured by contract; workmanship not by contract.
35. One keeper at 46l. 3s.; one helper at 56l. 10s.
36. 317l. 8s. 7d.; 131l. 10s. 10d. Total, 449l. 0s. 5d.
37. 1857, repairs, 18s.; cylinders, 18s.; cleaning stores, 1l. 1s. 8d. 1858, repairs, 17s.; cylinders, 18s.; cleaning stores, 1l. 1s. 8d.
38. 1857, oil, 110 gallons. 1858, oil, 109 gallons.
39. Pale rapeseed oil. 1857, 4s. 2½d. per gallon. 1858, 3s. 5d. per gallon.
40. Cotton concentric wick. 1857, 15s. total cost. 1858, 15s. total cost.
41. Not yet procured.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. Not lighted in 1852. For quarter, 1858, 14l. 5s. 3d.
44. 1852, 245l. 19s. 8d. (including boat attendance and carriage of stores.) 1858, 259l. 2s. 3d. (ditto.)
45. None.
46. None.
47. None.
48. No complaints or representation as to the light being unnecessary or in an unsuitable position.
49. None.
50. By Committee of the Board and by the Superintendent of Lighthouses.
51. By Committee of Board in 1858; by Superintendent in August 1858.
52. Not known to have been extinguished during night since established.
53. At least one spare lamp kept in readiness.
54. None in 1858.
55. Tide signals are not used at this station.
56. No night signals used.
57. Keeper on watch is relieved in the lightroom at 12 o'clock, midnight. Keepers are changed from the station as changes from other stations require and allow.

192.

DROGHEDA, NORTH.

East Coast of Ireland.

Lat. and Lon. for Drogheda, East, stated in Special Return.

3. No local authority.
4. One light lighted. Timber framing for a second placed but not lighted.
5. 1838.
6. Drogheda Town and Harbour Commissioners.
7. The site being well placed for an inner harbour light for guidance of vessels within the bar and entrance of the channel.
8. 1842.
9. Designed by George Halpin, Engineer to the Port of Dublin Corporation. The timber framing supplied under contract by Messrs. Carolin, of Dublin.
10. Harbour light.
11. The lighthouse chiefly of timber; open framing; moveable on parallel ways.
12. No conductor.
13. 25½ feet.
14. 23 feet.
15. 6 miles.
16. 10 miles, shown to inner reach of the harbour within bar.

PORT OF DUBLIN CORPORATION, BALLAST OFFICE.

197.

HOWTH BAILY.

East Coast of Ireland, on extreme Southern Point of the Baily.

Lat. 53° 21' 40" N., Lon. 6° 3' 20" W.

8. No local authority.
4. One light.
5. Not ascertained.
6. Not ascertained.
7. The old lighthouse erected by the Revenue Board had been placed too far from the shore, and on too high ground. The Port of Dublin Corporation selected the present position as the most southern and projecting point, and much less liable to be obscured by fogs.
8. Present light exhibited in 1813.
9. Present lighthouse designed by the late George Halpin, Engineer to Port of Dublin Corporation, and built under his direction by the workmen of the Corporation, not by contract.
10. Sea light.
11. Chiefly cut stone; solid wall; the lighthouse on summit of the point is of circular form, coloured white.
12. No separate external conductor. Wrought-iron handrail forms a continuous conductor from lantern to base of tower.
13. 42 feet.
14. 134 feet.
15. 13¼ miles.
16. 17½ miles.
17. 270° N.E. by N. to N.W. ¾ W.
18. Fixed. Light of natural appearance, white.
19. Fixed.
20. During every night from sunset to sunrise.
21. Catoptric.
22. 1st order.
23. No alteration in the general character of the illuminating apparatus. Burners adapted for use of rapeseed oil.
24. Reflectors from the Soho Plate Company.
25. Through dome of lantern. There are also ventilators in the blocking and floor of lightroom to regulate supply of air.
26. Large fog bell struck by machinery.
27. 26 days.
28. 26 days.
29. *l* including cost of lantern, light apparatus, &c.
30. Finished.
31. Lantern sash, 13 feet diameter, 8 feet high; *l*.
32. Not purchased; the old lighthouse transferred by the Revenue Board; the present light erected by Port of Dublin Corporation.
33. 9*l*. 1*s*. 8*d*.
34. Coated with paint once every year, 57*l*. 9*s*. 8*d*. Paints procured by contract; workmanship not by contract
35. Two keepers, one at 64*l*. 12*s*. 4*d*.; one at 46*l*. 3*s*.
36. 930*l*. total cost.
37. 1857, cylinders, 7*l*. 4*s*.; cleaning stores, 2*l*. 9*s*. 1858, repairs, 19*l*. 14*s*. 6*d*.; cylinders, 7*l*. 4*s*.; cleaning stores, 2*l*. 9*s*
38. 1857, oil, 730 gallons; wicks, 12 gross. 1858, oil, 727 gallons; wicks, 12 gross.
39. Pale rapeseed oil. 1857, 4*s*. 2½*d*. per gallon. 1858, 3*s*. 5*d*. per gallon.
40. Argand cotton wicks. 1857, 3*s*. 6*d*. per gross; 2*l*. 2*s*. total cost. 1858, 3*s*. 6*d*. per gross; 2*l*. 2*s*. total cost.
41. Fog bell, ; machine, ; belfry, &c.
42. From Mercantile Marine Fund. Revenue collected and paid as per statement in Special Return No. 1.
43. 1852, quarter, 1,033*l*. 10*s*. 5*d*. 1858, quarter, 826*l*. 7*s*. 8*d*. Total for 1852, 4,134*l*. 1*s*. 6*d*.
44. 1852, 533*l*. 1*s*. 4*d*., including cost of freight of stores, &c. from Dublin. 1858, 276*l*. 13*s*. 1*d*., ditto.
45. None.
46. None.
47. None.
48. No complaint or representation made as to the light being unnecessary or placed in an unsuitable position.
49. None.
50. By Committee of the Port of Dublin Corporation and by the Superintendent of Lighthouses.
51. Inspected in 1857; ditto, 1858.
52. Not known to have been extinguished.
53. Spare lamp and burner kept ready. Oil stored in oil store close to the lighthouse.
54. Barometer and thermometer.
55. No tide signals used; no application made to have them used.
56. Signal mast and flag. No night signals used.
57. Keeper on watch relieved in the lighthouse at 12 o'clock, midnight. Keepers are changed from the station as changes from other lighthouses require and allow.

CIRCULARS Nos. II. & IV.—FLOATING LIGHTS.

IRELAND.
Circular II.

GENERAL RETURN.

I. Port of Dublin Corporation.
II. The "Seagull," moored off the north end of the Kish Bank, Bay of Dublin; "Relief," moored off the north end of the Arklow Bank, coast of Wicklow; "Brilliant," moored off the north end of the Blackwater Bank, coast of Wexford; "Petrel," moored off the Coningbeg Rock, near Saltee Islands, coast of Wexford.
III. Where dangerous sand banks and sunken rocks exist in the general track of shipping, and where light-houses cannot be erected.
IV. A spare floating light is kept moored off the Corporation's stores in Dublin; she has a mate and two seamen attached to her; is fully equipped with stores and ready for immediate service; a full crew to take her to a station can always be procured before a steamer could be hired to tow her, and to get her steam up. The time this would take would depend on whether there were any steamers available for this purpose in the harbour of Dublin. The Corporation have no steamer of their own for this service.

V. The floating lights by day all carry a ball or balls at their mast helads. To distinguish them from each other by day they have also the name of the rock or bank which they are placed to mark painted on their sides. By night they are distinguished from each other by the character of their lights, which in the four floating lights differ.

VI. There is a marked peculiarity of lights exhibited by floating lights on the coast of Ireland, which ensures them from being mistaken for ships' lights. The Arklow floating light, the only one that exhibits a single fixed light, is so superior in brilliancy to the ordinary ships' lights that it is next to impossible to mistake it.

VII. The only description of illuminating apparatus used in the floating lights is catoptric.

VIII. Catoptric illuminating apparatus only is used in the floating lights, as it is considered to be the best adapted for them.

IX. The Kish Bank floating lights exhibit three fixed lights triangular. The Arklow floating light exhibits one single bright fixed light. The Blackwater Bank light exhibits one revolving and one fixed bright light on different masts and at different altitudes. The Coningbeg light exhibits two bright fixed lights at different altitudes and on different masts.

X. The illuminating apparatus for a floating light is decided on, always bearing in mind the character of the lights in the vicinity, to avoid as much as possible any mistake in the characters, and also with a view to the efficiency of the light.

XI. Table of Prices—

SEAGULL, at Kish Bank. Three-light catoptric; 8 burners in each; total, 24 burners. Reflectors, 12 inches in diameter.

Price	-	-	Three fixed, 1,140l.
Ordinary repairs	-	-	28l. 7s. 4d.
Oil	{	Consumption	- 17 galls. 1 qt.
	{	Cost	- 2l. 17s. 6d.
Wicks	{	Consumption	- 4s.
	{	Cost	- 1s. 4d.

The consumption of oil differs considerably at times, owing to the quality of oil supplied; the same may be said of the consumption of wicks, which differs with different oil.

RELIEF, at Arklow Bank. One-light catoptric; 16 burners. Reflectors, 12 inches in diameter.

Price	-	-	One fixed, 703l. 9s. 2d.
Ordinary repairs	-	-	21l. 1s.
Oil	{	Consumption	- 12 galls. 1 qt.
	{	Cost	- 2l. 0s. 10d.
Wicks	{	Consumption	- 4s.
	{	Cost	- 1s. 4d.

In the year 1857, owing to some impurities in the oil, the wicks were destroyed after one night's burning.

BRILLIANT, at Blackwater Bank. One fixed catoptric; 8 burners. One revolving catoptric; 4 burners. Reflectors, 12 inches in diameter.

Price	-	-	One fixed, 315l. 8s.
Ordinary repairs	-	-	10l. 10s.
Oil	{	Consumption	- 6 galls. 1qt.
	{	Cost	- 1l. 0s. 10d.
Wicks	{	Consumption	- 20.
	{	Cost	- 63d.
Price	-	-	One revolving, 560l. 7s. 11d.
Ordinary repairs	-	-	14l.

Oil	{	Consumption	- 3 galls. 2 qts.
	{	Cost	- 11s. 8d.
Wicks	{	Consumption	- 12.
	{	Cost	- 4d.

PETREL, at Coningbeg Station. Two lights, catoptric; 8 burners in each lantern; total, 16 burners. Reflectors, 12 inches in diameter.

Price	-	-	Two fixed, 794l. 9s. 4d.
Ordinary repairs	-	-	22l.
Oil	{	Consumption	- 11 galls. 2 qts.
	{	Cost	- 1l. 18s. 4d.
Wicks	{	Consumption	- 34.
	{	Cost	- 114d.

XII. Herewith sent.

XIII. Bells were formerly used on board floating lights, but were discontinued as being liable to be mistaken for ships' bells, since which large and well-toned gongs have been substituted for them; these can only be heard at a short distance. Experiments have been made with an atmospheric whistle, but found not to answer. A gun was also under consideration, but objected to by the Board of Trade.

XIV. No tide signals are used in the floating lights, there being no tidal harbours in the vicinity of any of them, except the harbour and river of Dublin, which has a tide light shown from the lighthouse at the entrance.

XV. "Blackwater Bank." From Alderman Green on part of shipowners of Waterford, February 19th, 1856. Alderman Green informed that measures had been taken for establishing a light there, July 21st, 1856.

Application from Galway Harbour Commissioners for a light on Margaretta Rock, October 9th, 1859.

Galway Harbour Commissioners informed the Board of Trade would not sanction same, October 12th, 1858.

XVI. Total maintenance from year 1845 to 1858 (both inclusive):

Year	£	s.	d.	£	s.	d.
1845	-	-	-	3,965	7	6
1846	-	-	-	3,619	6	7
1847	-	-	-	3,565	1	1
1848	-	-	-	2,580	14	11
1849	-	-	-	5,127	18	7
1850	-	-	-	2,767	17	7

"	1856	-	-	4,146	0	1
"	1857	-	-	3,687	2	10
"	1858	-	-	5,065	8	1

XVII. Improvements of this nature are always referred to competent parties to inquire and report as to the value of same and the probable expense.

XVIII. There are no printed forms for inspection, but it is the duty of the marine inspector to inspect these vessels frequently, and to report to the board anything which requires their interference. Other printed forms for the persons in charge are herewith sent.

XIX. In 1856 Waterford merchants applied for light on Blackwater Bank; Board of Trade sanction, 1857. September 1858, Galway Harbour Commissioners applied for a lightvessel or bell buoy for the better marking of the Margaretta Rock, Galway Bay; application recommended by the Board for the favourable consideration of Privy Council for Trade, who refused to "sanction any outlay from the Mercantile Marine Fund for that purpose."

XX. A Committee of the Commissioners having within the last month inspected these vessels, have reported them as being in the best order and altogether in a most efficient state.

This Corporation recommend the placing of a fog gun on board the "Kish" lightship, 19th February, 1859. Board of Trade refuse to sanction, 18th April, 1859; (22nd November 1859; 3d December, 1859.) Messrs. Wilkins, of London, have agreed with the Corporation to supply an improved fog bell worked by machinery, to be placed on the Kish lightvessel, which bell they guarantee will be distinctly heard at a distance of at least three miles to windward of the vessel, in any and every state of weather. Board of Trade have sanctioned same. See also Special Return.

FLOATING LIGHTS—(SPECIAL RETURNS).

SPECIAL RETURNS.

Index Map 34.

KISH BANK FLOATING LIGHT.

- I. "Seagull." Moored off north end of Kish Bank, Dublin Bay.
- II. Depth of water, $8\frac{1}{2}$ fathoms. Bottom, fine sand. Maximum strength of tide, $2\frac{1}{2}$ knots.
- III. Port of Dublin Corporation.
- IV. No local agent employed.
- V. In 1810, by Corporation to Lord Lieutenant.
- VI. To guard vessels from Kish Bank, which lies in the fair way for Kingstown and Dublin Harbours.
- VII. Since November 16, 1811.
- VIII. Three lights are exhibited, one from the foremast 26 feet, one from mainmast 36 feet, and one from mizen mast 24 feet above the level of the water.
- IX. See builder's specification herewith sent.
- X. See builder's specification herewith sent.
- XI. 163 tons.
- XII. Built at Bristol by Charles Hill and Son.
- XIII. Aft, 8 ft. 9 in.; forward, 8 ft. 1 in.
- XIV. Black, with a white streak.
- XV. Carries a ball at the mainmast head, has "Kish Bank" painted in white letters on her sides.
- XVI. Has three masts, a fore staysail, fore lug, mainsail, and mizen lug.
- XVII. One from the main truck to the water, and one from the fore and mizen trucks to the eyes of the chain rigging. The chain plates have copper bands $\frac{1}{2}$ in. by $\frac{1}{2}$ in. attached to them, which hands reach to the 6 ft. water line.
- XVIII. Moored with a mushroom anchor and 200 fathoms of chain; has a spare mushroom and 200 fathoms of chain.
- XIX. Mushroom anchor 44 cwt., chain cables, $1\frac{1}{2}$ in. short linked.
- XX. Mushrooms by Robert Mallett, Dublin; cables by Wood and Brothers, Liverpool.
- XXI. Main lantern 36 feet, fore lantern 26 feet, mizen lantern 24 feet.
- XXII. Height of the eye above the sea 10 feet, distance of sea horizon about 3.65 miles.
- XXIII. $11\frac{1}{2}$ nautical miles.
- XXIV. Three fixed lights, colour white.
- XXV. None.
- XXVI. From sunset to sunrise.
- XXVII. Catoptric.
- XXVIII. Eight burners in each lantern, total 24; diameter of reflectors, 12 inches.
- XXIX. None.
- XXX. Wilkins, Long Acre, London.
- XXXI. Lanterns are suspended by chain ties rove through cheek blocks each side of the mast head. Lamps and their reflectors are suspended on gimbals to a traversing frame.
- XXXII. By a gong.
- XXXIII. Twenty-four days.
- XXXIV. Twenty-four days.
- XXXV. Contract, 3,651*l.* Sheathing, 283*l.* 12*s.* 9*d.*
- XXXVI. 6,767*l.* 12*s.* 8*d.*
- XXXVII. Ordinary, 534*l.* 7*s.* 8*d.*
Extraordinary, 294*l.* 12*s.* 10*d.*
- XXXVIII. One master, one mate, three lamp-lighters, six seamen; total, 11.
- XXXIX. Master, 7*l.* per month; mate, 5*l.*; lamp-lighters, 2*l.* 17*s.* 2*d.*; seamen, 2*l.* 11*s.* 8*d.* each. Mates appointed since 1853 receive but 4*l.* per month.
- XL. Eleven persons at 1*s.* 3*d.* per day each; total, 250*l.* 18*s.* 9*d.* per annum.
- XLI. The crew receive 1*s.* 3*d.* per day each, and provide their own provisions.
- XLII. Wood and Co., chains 508*l.* 11*s.* 11*d.*; anchor and do. 95*l.* 9*s.* 3*d.*
- XLIII. W. Wilkins, London, 1,215*l.*
- XLIV. 1857, 11*l.* 1*s.* 6*d.*; 1858, 15*l.* 3*s.* 9*d.*
- XLV. Consumption of oil for 1857, 648 gallons
" " " 1858, 658 gallons.
" " " of wicks, 1857, 15 gross and 2 dozen.
" " " " 1858, 10 gross.
- XLVI. Rape oil used in 1857 at 4*s.* 2*d.* per gallon; total annual cost, 136*l.* 7*s.* 0*d.*
Rape oil used in 1858 at 3*s.* 5*d.* per gall., 112*l.* 8*s.* 2*d.*
- XLVII. Cotton wick used in 1857, at 4*s.* 6*d.* per gross; total annual cost, 31*l.* 8*s.* 3*d.*
Cotton wick used in 1858, at 3*s.* 6*d.* per gross; total annual cost, 1*l.* 15*s.*
- XLVIII. The gong cost 6*l.*
- XLIX. Mercantile Marine Fund, payable into Ballast Office.

- L. June 1852, 1,074*l.* 18*s.* 10*d.*; June 1858, 829*l.* 0*s.* 11*d.*; total for year 1852, 4,299*l.* 15*s.* 4*d.*
- LI. 1852, 449*l.* 10*s.* 3*d.* 1858, 1,302*l.* 18*s.* 8*d.* This includes all attendance of vessels and carriage of stores.
- LII. None.
- LIII. None.
- LIV. None.
- LV. None.
- LVI. None.
- LVII. None.
- LVIII. The Lighthouse Committee and Marine Inspector to Board.
- LIX. May 19, 1857; May 15, 1858, June 25, 1858; September 29, 1858.
- LX. No.
- LXI. Parted her chain in a heavy gale of wind on the night of December 27, 1852, was brought up by her spare mushroom and chain, but out of her position. Replaced on 30th December 1852.
- LXII. None supplied.
- LXIII. No life-boat is attached to the ship, and never has been the custom; her own boats are, however, to some extent available.
- LXIV. Have no code, but the lightvessel has rockets and blue lights on board, which burnt every quarter of an hour at night, are a signal to the life-boat at Kingstown that a vessel is on the bank.
- LXV. No (tide) signal is exhibited from this vessel, as there is a tide light shown at the entrance of the river and harbour of Dublin.
- LXVI. The master and mate have leave alternately month about. Two of the crew have leave monthly.
- LXVII. The vessel's stores are carried by the buoy tender. Provisions and water for the crew by the contract attending boat from Kingstown on the 1st, 10th, and 20th of the month. The liberty men are conveyed by the attending boat.
- LXVIII. Yes, at Dublin; she is in every respect ready for the sea. A contract exists with a steam packet company in Dublin to supply a steamer to tow her to her station. The delay would depend whether there was a steamer in the Port available for this purpose.
- LXIX. Rules and regulations herewith sent.

Index Map 35.

ARKLOW BANK FLOATING LIGHT.

- I. The "Relief." Moored off the south-west end of the Arklow Bank, coast of Wicklow.
- II. Depth of water, 22 $\frac{1}{2}$ fathoms. Bottom, hard sand and shells. Maximum force of tide, $2\frac{1}{2}$ knots.
- III. Port of Dublin Corporation.
- IV. No agent employed.
- V. July 1823, by merchants of Waterford.
- VI. To mark the south end of the Arklow Bank, and as a guide for vessels passing up and down between the Arklow Bank and the main.
- VII. Since March 1825.
- VIII. One light only is exhibited from the mainmast.
- IX. Length overall, 77 feet; length of keel, 71 feet; breadth, 20 feet; depth of hold, 10 feet 2 inches.
- X. Built of British oak.
- XI. 126 tons.
- XII. Built at Milford in 1826 by William Roberts.
- XIII. Aft, 8 feet 5 inches; forward, 6 feet 7 inches.
- XIV. Black, with a white streak.
- XV. Carries a ball at her mainmast-head, and has "Arklow" in white letters on her sides.
- XVI. Has three masts, a fore staysail, four lug, mainstay sail, and gaff mizen.
- XVII. Has long copper wire lightning conductor from main truck to water.
- XVIII. Rides by a mushroom anchor and 220 fathoms of chain, has a spare chain of 200 fathoms and a spare mushroom.
- XIX. Mushroom, 38 cwt.; riding chain, $1\frac{1}{2}$ inches; spare chain, $1\frac{1}{2}$ inches.
- XX. Chains by Wood, Brothers, Liverpool; mushrooms by Clason and Co., Dublin.
- XXI. Thirty-four feet.
- XXII. Height of the eye, 9 feet; sea horizon distant 3.4 miles.
- XXIII. $11\frac{1}{2}$ miles.
- XXIV. Fixed.
- XXV. None.
- XXVI. Sunset to sunrise.

- LIX. May 6, 1857; September 28, 1857; May 5, 1858; August 29, 1858; September 28, 1858.
- LX. No.
LXI. No.
LXII. None.
- LXIII. No life-boat is attached to the ship, and never has been the custom; her own boats are, however, to some extent available.
- LXIV. Have no code, but the light vessel has rockets and blue lights on board, which, burnt every quarter of an hour at night, are a signal to the life-boat at Kilmore that a vessel is on the rocks.
- LXV. No tide light is exhibited, as there is no tidal harbour in the vicinity.
- LXVI. The master and mate have leave alternately month about; two of the crew have leave monthly.
- LXVII. The vessel's stores are carried by the buoy tender; provision and water for the crew by the contract attending boat from Kilmore the 1st, 10th, and 20th of the month. The liberty men are conveyed by the attending boat.
- LXVIII. Yes, at Dublin. She is in every respect ready for sea; a contract exists with a steam packet company in Dublin to supply a steamer to tow her to her station. The only delay would depend on whether there was any steamer in the Port of Dublin available for this purpose.
- LXIX. Rules and regulations herewith sent.

Index map 37.

CONINGBEG FLOATING LIGHT.

- I. "Petrel." Moored off the Coningbeg Rock, near the Saltee Islands, coast of Wexford.
- II. Depth of water, 30 fathoms. Bottom, fine sand. Maximum strength of tide, 2 knots.
- III. Port of Dublin Corporation.
- IV. No local agent employed.
- V. March 1821, by the Chamber of Commerce, Waterford.
- VI. To guard vessels from the Coningbeg and other half-tide rocks lying to the southward of the Saltee Islands.
- VII. Since August 1824.
- VIII. Two fixed bright lights are exhibited from this vessel; the higher from the mainmast at a height of 38 feet 6 inches above the water, the lower light from the foremast at a height of 27 feet 6 inches above the water.
- IX. See builder's specification herewith sent.
- X. See builder's specification herewith sent.
- XI. 163 tons.
- XII. Built at Blackwall by Money Wigram and Sons.
- XIII. Draught of water forward, 7 feet 6 inches; aft, 8 feet 6 inches.
- XIV. Black, with a white streak.
- XV. Carries a ball at her mainmast head, has "Coningbeg" in white letters painted on her sides.
- XVI. Has three masts, a fore staysail, fore lug, mainstay sail, and mizen lug.
- XVII. One from the main truck to the water, and one from the mizen truck and fore truck to the eyes of the chain rigging. The chain and plate have copper bands a quarter inch by two inches attached to them, which bands reach to the 6 foot waterline.
- XVIII. Moored with a mushroom anchor and 200 fathoms of 1½ chain; has a spare anchor of 22 cwt., and 220 fathoms of 1½ spare chain.

CIRCULAR No. V.—BUOYS AND BEACONS.

- I. Port of Dublin Corporation.
 II. A chart is herewith furnished, showing the position of all buoys under the management of the Port of Dublin Corporation forming one district. For jurisdiction of Port of Dublin Corporation, see Merchant Shipping Act, 17 & 18 Vict., Part VI., Sect. 394.
 The Corporation do not levy tolls on shipping or otherwise for buoys, therefore no income is derived from them.
 III. The Board of Trade and Elder Brethren of the Trinity House.
 IV. Vide Merchant Shipping Act, Part VI., Sect. 394.

l. 13l.
m. Buoys of this class were procur'd from Messrs. Brown and Lennox, at a fixed price, 16l. each.
n. Colour green, with the word "Wreck" on it.
o. Two.

VI. Of the descriptions of buoys at present used by the Corporation that of Herbert's is the most approved, both for tideways and exposed situations. A buoy, lately patented by B. B. Stoney, of Dublin, is also an excellent sea mark, and rides well on tide-ways, but it has not been sufficiently tested in the most exposed situations to speak with confidence of its merits.

VII. All buoys on the north, east, and south coast of Ireland are shifted by the buoy tender every six months, and brought in for examination and painting. Buoys on the west coast are shifted by the buoy tender once a year during the summer, but are cleaned and painted at their moorings in the winter, if they require it, which is done by persons resident in their vicinity, who are employed for that purpose when necessary.

VIII. Wooden buoys are surveyed by planing and boring their staves to ascertain their soundness; should any stave be found to be defective, an estimate for the necessary repairs is obtained from a cooper, and should his estimate be considered moderate and the buoy worth the expense of repairing, it is done. Iron buoys seldom require repairs except they have been run into; any repairs they might require would be done by the contractor for boiler work on stipulated terms, according to days work and material used. Iron buoys when brought in are examined by competent persons, internally and externally.

BUOYS AND BEACONS.

IRELAND.
Circular V.

- IX, X. Vide returns as to beacons.
 XI. In all cases where dangers are for the first time to be marked by buoys the most approved descriptions are now adopted, except where there may be other buoys in the vicinity, and where a marked distinction of character is requisite; this necessitates the introduction of different buoys: since 1857, six of Herbert's, six egg-bottomed, and one of Stoney's have been introduced.
 XII. By direction of the Trinity House, in their letter of 10 November 1859, harbour rivers and channels are in future to be marked by either black or red buoys on the starboard hand when entering from the sea, and on the port hand by buoys of the same colour as those on the starboard hand, with the addition of a white belt; and middle dangers to be marked by white buoys surmounted by a black beacon. Hitherto the Corporation, when marking rivers and harbours, have in most cases placed black buoys on the starboard hand and red on the port.
 XIII. Vide returns as to beacons.
 XIV. The Mercantile Marine Fund, paid into the Ballast Office, Dublin.
 XV. Vide returns as to beacons.
 XVI. Income, nil.

The total expenditure in 1852 for 38 buoys was 1,382*l.* 18*s.* 6*d.*
 The total expenditure in 1858 for 54 buoys was 2,777*l.* 2*s.**

- XVII, XVIII. Galway Harbour Commissioners apply to have a bell buoy or lightship placed to mark St. Margaretta Rock, September 1858. Ballast Office strongly recommend same to Board of Trade, September 1858. Board of Trade refuse to sanction on the grounds that it would be altogether for local purposes, October 1858.

The Knight of Kerry, on the part of certain parties in Valentia, applies to have that harbour marked by buoys, October 1858. The Board refused to sanction on the ground that the benefit derived would be purely local, October 1858.

Captain Crispin applies for a buoy to mark the Maiden Rock, Kennamer river, November 1858. Board of Trade refuse to sanction, being purely local, December 1858.

Earl of Leitrim applies to have "Mulroy Harbour" marked, February 1859. Ballast Office request to be furnished with a return of the shipping frequenting that harbour.—(Return not yet furnished.)

Board of Trade forward letter from Admiralty requesting that buoys be placed to mark certain dangers in Berehaven, February 4, 1859.

This Board approve of same being marked, and recommend same to Trinity House, who approve thereof, March 1859.

Board of Trade suggests that as the place is used chiefly by Her Majesty's ships, two-thirds of the expense of marking it should be borne by the Admiralty.

Board of Trade subsequently state that having been in communication with the Admiralty, that

department is not prepared to sanction the expense thereof, and under the circumstances they cannot allow the cost to be borne by the Mercantile Marine Fund, July 28, 1859.

Master of S.S. "Calypso" applies for two additional buoy on the Arklow Bank, September 1859. Ballast Board approve, October 1859. Trinity Board acquiesce, November 1859. Board of Trade sanction, November 15, 1859.

Ballast Office recommend buoy to mark "Brigg's Rock," Belfast Lough, September 1859. Still under consideration of Trinity Board, 1860.

Wicklow Harbour Commissioners apply for buoys to mark the "Horseshoe Shoal" off Wicklow Head, December 1859.

In course of placing.

The Corporation recommend that the Tuns Bank buoys' entrance to Lough Foyle, in charge of the Londonderry Harbour Commissioners, should be taken under their jurisdiction, August 27, 1859. The Board of Trade refuse to sanction unless a charge be made on shipping for the maintenance of these buoys, November 8, 1859.

- XIX. The buoys were inspected in May and September 1857, and in May 1858, by the Committee of Inspection and Marine Inspector, and are constantly examined by Marine Inspector whenever he happens to be in the vicinity of any of them.
 XX. Vide returns as to beacons.
 XXI. The public are informed of any proposed or accidental change in the position of a buoy, or of a buoy being off its station, by advertisements in the principal English, Irish, and Scotch newspapers, particularly those connected with the shipping interests; also by printed "Notices to Mariners," which are sent by the Admiralty, Board of Trade, Trinity House, Commissioners of Northern Lights, and Collectors of Customs at the different ports in Ireland.

XXII. Yes, either by lightkeepers, or where no lighthouse is in the vicinity, by competent persons who undertake the service for a stipulated sum.
 XXIII. The Corporation are informed of any accident or change in the position of a buoy either by lightkeepers or persons appointed to watch the buoys; any person not in the service of the Corporation is rewarded for information of this sort. The Coast Guard also report any accidental changes in the position of a buoy.

- XXIV. *a, b, c, d, e.* None.
f. Captain Wilcox, R.N., states there is difficulty in distinguishing buoys in approaching Kingstown Harbour, February 10, 1858. Change of colour of St. Burford Bank buoy ordered March 1858. Admiralty informed accordingly.
g, h, i, j, k, l, m. None.

XXV. Yes; Herbert's and Stoney's, which have met the approval of this authority, they having been thoroughly tested by their officer and reported favourably upon.

XXVI. The buoys are immediately under the charge of their Marine Inspector, with general instructions to attend to their condition, and report immediately to the Board should any accident occur to them.

* This expenditure includes the sum of 85*l.* 12*s.* 8*d.* for spare buoy chains, none of which were used in 1858.

BEACONS.

- I. Port of Dublin Corporation, Ballast Office, Dublin.
 II. In book of charts and separate tabular statements herewith sent are described the number and positions, &c. of fixed beacons under the management of this authority. On the Admiralty charts sent with the General Lighthouse Return the positions of the beacons are marked.
 III. Responsible directly to the Board of Trade, whose sanction is requisite to the expenditure for maintaining beacons already established, or for placing new or additional beacons.
 V. See chart, drafts, and statement relative to buoys,

IX. In the book of charts referred to, and herewith sent, an engraved delineation of several of the beacons, and some additional drafts, have been prepared.

Beacons of masonry are the most durable, and are in so far preferable, but beacons of iron filled with masonry are in many situations considerably less costly, admitting of more rapid execution, and can with safety be sooner exposed to the action of the sea in storms.

X. With this is furnished, in a tabular form, a list of beacons under this authority with a statement under the following heads.—(See next page.)

IRELAND.
Circular V.
Question X.

Numbers, Names, and precise Situations of all Beacons maintained by the Port of Dublin Corporation at and off the Coast and several Ports of Ireland, with the Dates at which they were placed.

The Purpose for which each was erected.

No.	Name.	Precise Situation.	Latitude.		Longitude.	Dates at which they were placed.	Statement by Superintendent of Lighthouse.
			Lat.	Long.			
EAST COAST.							
1	Poolbeg	Dublin Bay, entrance of harbour on end of N.E. pier, covered at ¼ flood.	53 20 31	6 9 16	1848	1848	To mark northern side of channel, between the North Bull Sands, also to beacon outer end of Breakwater Pier.
1	Wicklow	Old lighthouse tower on Wicklow Head, south-west of lighthouses.	52 57 35	6 0 22	before 1810	1810	First built as a lighthouse tower, by the Revenue Board, erection of present lighthouse, the old tower, which, 141 ft high, formed a conspicuous mark by day, was left as a beacon.
1	Carrick Rock	Outside Greengore Point entrance to South Bay of Wexford.	52 14 13	6 18 33	—	—	Beacon to mark the Carrick Tidal Rock
1	Fundale Rock	East Coast of Co. Wexford, eastward of Carnore Point.	52 11 0	6 20 40	1846	1846	Beacon to mark the Fundale Tidal Rock, and assist in outer edge of shoal margin, extending from shore.
SOUTH COAST.							
1	Coningbeg Rock	South Coast of Co. Wexford, off South Saltee Island.	52 4 2	6 38 52	—	—	Damaged pillars of iron form a rough beacon on this rock, the bay, and to guide in the channel between Coningbeg Rocks.
5	Tramore Bay	Three towers on Great Newtown Head	—	—	—	—	The three towers on Great Newtown Head mark the point on west side of the bay, to distinguish that bay from entrance to Waterford Harbour.
1	Capel Island	Two towers on Brownstown Head	—	—	—	1821	The two towers on Brownstown Head mark the outer point of the eastern side of Tramore Bay.
1	Barrels	South of Youghal Harbour, west side of Entrance to Youghal Bay.	51 52 54	7 51 7	1848	1848	First intended for lighthouse tower, but not completed as a beacon tower to mark the approach from sea to Youghal Bay, and as a beacon on west side of the bay.
1	Horse Rock	In Courtmasherry Bay, Co. Cork	51 37 0	8 37 20	1848	1848	To mark tidal rock, and to guide to inner channel
1	Horse Rock	East of Barry Point in Courtmasherry Bay.	51 36 35	8 40 0	1853	1853	To beacon tidal rock, and to form a mark on rocky shoals of the bay, and to guide in the channel between Barry Point and the Horse Rock.
1	Wind Rock	In Clonakitty Bay, off Ringhead	51 35 38	8 51 15	—	—	Beacon to mark outer point of tidal rock, and to beacon entrance of Clonakitty Harbour.
3	Glandore Harbour	Co. Cork, in central channel of Harbour	51 33 12	9 6 40	—	—	To mark three tidal rocks, which bear north and south to each other, and guide through the harbour channel.
2	Baltimore	One in Baltimore Harbour, Co. Cork One on Beacon Point, east side of entrance to Baltimore Harbour.	—	—	—	—	Beacon marks tidal rock in the harbour
1	Bull Rock	Off Scull Point, west side of entrance to Scull Harbour, Co. Cork.	—	—	—	—	Beacon of masonry on east side of entrance marks the approach from seaward to Baltimore Harbour.
1	Dog's Rock	East end of Bear Island, west side of entrance channel.	51 38 30	2 46 15	1847	1847	To mark tidal reef off east end of Bear Island, to guide the approach from seaward, and in entering or leaving Bearhaven.
1	Cartown (Bearhaven)	On tidal rock, entrance to Castletown Harbour.	—	—	—	1847	To mark tidal rock, and to guide through entrance of Castletown.
1	Bearhaven (Western Entrance).	On Ardakians Point, western entrance to Bearhaven, Co. Cork.	—	—	—	1854	To mark western entrance channel of Bearhaven
WEST COAST.							
4	Valencia	Eastern entrance, one on tidal rock in channel, within entrance. Western entrance, three on tidal rocks in channel, near Portmagee.	51 53 45	10 19 17	1846	1846	Eastern Entrance.—One beacon to mark harbour tidal rock, and to guide in the main entrance channel. Western Entrance.—Three beacons to mark small tides in western entrance channel, and to guide through the entrance channel.
3	Castlemaine	Two beacon towers placed on Rossbeg Point.	—	—	—	—	To aid in navigating Castlemaine Bar Channel
1	Bowliec Rock	River Shannon, north side of channel, east of Farbeat Lighthouse.	52 30 30	9 19 13	1850	1850	To beacon tidal rock in River Shannon
1	Scarlet's Rocks	In River Shannon	52 14 25	8 45 33	—	—	To beacon the Scarlet's Tidal Rock in River Shannon westward of Cratloe.
1	Black Rock	In Galway Bay, between Carrigna Beacon and Margaretta Shoal.	53 14 15	9 6 20	1847	1847	To beacon tidal rock on north side of Galway Bay, and to guide between it and the St. Margaretta Rock, where there is a buoy when approaching seaward from Galway Harbour.
1	Carrigna Rocks	In Galway on north side	53 14 33	9 8 40	—	—	Beacon to mark tidal rock on the north side of Galway Harbour.
1	Canon (or Cannanagh Rock)	In centre of entrance to Cashla Bay	53 14 16	9 33 40	1845	1845	To mark tidal rock in centre of entrance channel of Cashla Bay, and guide towards inner anchorage.
1	Inishbinn	Two towers	—	—	—	—	Placed to lead into the small harbour
1	Carrigadillisk	In Clew Bay, outside Westport Bay	—	—	—	—	To mark this tidal rock, and to guide towards inner anchorage of Clew Bay.
1	Carrigamore (or Carrigacmore).	In Blacksod Bay, west side	—	—	—	—	To beacon tidal reef off west shore of Blacksod Bay, and to guide in passing in towards Ely Bay.
1	Sligo	Sligo Harbour, in channel near Oyster Island.	—	—	—	—	Tower to mark tidal rock in channel near Oyster Island, and for guidance in neighbouring channel.
3	Rutland Harbour	One on Nancy's Rock in Rutland Sound; three on tidal rocks in outer channel.	—	—	—	—	One pillar beacon on Nancy's (tidal) Rock in inner sound, the pillar beacons to mark tidal rocks in outer sound, and to guide through passages.
2	Gweedore Harbour	One on Beacon Rock, north side of entrance; one tidal rock, south side of entrance.	—	—	—	—	Two beacons to mark two of the tidal rocks in entrance from seaward to the small harbour and bay of Gweedore.
NORTH COAST.							
1	Bar Rock	County Donegal, Sheephaven	—	—	—	1857	Beacon to mark tidal rock in Sheephaven, and to guide through channel at bar.
1	Swilly Rocks	Lough Swilly, west side of entrance	55 15 10	7 35 25	1845	1845	Beacon to mark tidal rock off west shore of Lough Swilly, and within entrance of the Lough, and to serve for guidance on west side of entrance channel.
1	Brough Rock	Lough Foyle	—	—	—	—	Beacon to mark tidal rock in Lough Foyle on north side of the channel, and northward of the "Tuns" bank.
EAST COAST.							
1	Foreland	Off coast of County Down	—	—	—	—	Beacon to mark outer end of Foreland Point Reef on west side of Donaghadee Sound.
1	Sculmartin	Off coast of County Down	—	—	—	—	To beacon this half-tide rock, and to guide coasting vessels passing it, and the rocky shoals northward of it.
1	North Rock	North of South Rock Lighthouse	54 25 35	5 25 20	1856	1856	Beacon to mark this tidal rock, which is covered by a run of high water, and for guidance between north and south rocks.
1	Angus Rock	In centre of entrance to Strangford Lough	54 19 50	5 31 50	1851	1851	Tower to beacon Angus Rock, and to guide in navigation of the channel of entrance to Strangford Lough.
1	St. Patrick's Rocks	Entrance to Strangford Lough east of Killyard Point.	—	—	—	—	To beacon St. Patrick's Rocks, and to indicate approach to entrance channel of Strangford Lough.
1	Water Rock	Off Harbour of Killyough, County Down	54 14 20	5 30 30	—	—	Beacon to mark tidal rock outside of and in the approach from seaward to Killyough Harbour.
1	Cardee Rocks	Off Coast of County Dublin, northward of Balbrigan.	—	—	—	—	Beacon to mark tidal rock on north side of the approach from pillar to Killyough Harbour.
1	Taylor's Rock	Off north west side of Lambay Island	—	—	—	—	Beacon to mark tidal rock
1	Burton Rock	Off west side of Lambay Island	—	—	—	—	Beacon to mark tidal rock off west side of Lambay Island

IRELAND.
Circular V.

- XI. The use of iron in construction of fixed beacons is much more adopted than formerly, and admits of beacons being erected on smaller points of rock than formerly would have been practicable at any allowable cost.
- XII. See return as to buoys, *ante*.
- XIII. In the erection of a beacon, the form, &c. most suitable for the position is adopted.
- XIV. See return as to buoys, *ante*.
- XV. Beacons also are maintained from the Mercantile Marine Fund.
- XVI. None; there are not any tolls levied for beacons under this corporation.
- XIX. See return as to buoys, *ante*.
- XX. By committee of the Board, by the superintendent of lighthouses, and by foreman of repairs.
- XXIII. The lightkeeper of the nearest lighthouse station

is directed to make immediate report of accident to any beacon within his observation, or of which accident he may have been informed. The owners of attending boats to lighthouses are also to report accidents.

- XXV. Trial was made of an iron hollow pile put down by Dr. Potts' plan with intent to enlarge the structure if the trial proved successful. The trial was made by Messrs Fox and Henderson at their own risk; the sand was not penetrated to a sufficient depth, and the attempt was relinquished.

Trials have also been made of Mitchell's screw pile beacons. (*Note*.—When there are several screw piles well braced together, and secured below the limits of scour, they form a secure base, as at the Spit Bank and Dundalk pile lighthouses.)

CIRCULAR No. VI.

IRELAND.
Circular VI.

EVIDENCE OBTAINED THROUGH LLOYD'S AGENTS APPLICABLE TO COASTS UNDER THE SUPERINTENDENCE OF THE BALLAST BOARD.

58.

- I. John Walsh, agent for Lloyd's, Dublin.
- II. PORT OF DUBLIN.
- III. Corporation for preserving and improving the port of Dublin.
- IV. Yes, subject to the comments I make on subsequent queries.
- V. I believe the system of bnoys to be good. The beacon, however, at present on the end of Great North Wall is not sufficiently conspicuous to prevent accidents, which have occurred several times. A long piece of the wall at the outer end covers at half flood, and the channel between the extreme point and Poolbeg light being narrow requires a good, clear, and easily to be recognised beacon to point out the danger.
- VI. Personally I cannot, but a very experienced ship master well acquainted with the port suggests that a light should be placed on the east edge of Codling Bank, which extends much more to eastward than the Kish, as strangers coming up to Dublin at night or in thick weather with wind from west, coming outside the banks (as most strangers do) often get very far to leeward.
- VII. Oil.
- VIII. Not within my memory.
- IX. The sea buoys sometimes go adrift, but they are replaced the moment the weather permits.
- X. I cannot with the exception of those referred to in No. V, and the loss of the Victoria steam packet, which was lost under Bailey lighthouse in a snow storm, was attributed to the want of fog bell, which has since been remedied by the erection of one.
- XI. Half tide signal exhibited at the Poolbeg lighthouse.
- XII. Fog bells have been placed at the Bailey lighthouse and at the pier at Kingstown harbour, both absolutely necessary.
- XIII. They are painted black and red, the black being placed on one side of the channel, the red on the other; they are can shaped.
- XIV. I would not, excepting the introduction of "Stoney's" patent buoys where practicable.
- XV. No local dues are levied at this port in respect of buoys or beacons. The dues for lights are collected by the Collector of Customs for the Port of Dublin Corporation.
- XVI. I cannot specify any complaint, but in July, 1855, Mr. Bell, commanding one of the Chester and Holyhead steam boats, called my attention to the characters of the Kish, Bailey, and Poolbeg lights, the leading lights of the port, stating that the distinguishing features of each were not sufficiently marked to prevent mistakes in thick weather with an east or south-east gale, when the Kish light ship rode head to wind, and suggested certain alterations, which I, being then Receiver of Dues, brought to the notice of the Board of Trade, by whom the matter was referred to the Port of Dublin Corporation, and it was then decided that a revision of the lights on this part of the coast should take place when determining the character of Rock a Bill light, that revision has just taken place and been promulgated; the position of the lights on the Kish light ship has been altered, but I question much will the alteration meet the cases suggested by Mr. Bell.
- XVII. On the whole rather favourable.
- XVIII. There are no dues collected in respect of buoys or beacons. Those levied for lights are considered reasonable, but ship owners find it a hardship to have to pay lights when sailing out of the port in ballast, other than that supplied by the Corporation, which latter, from its character, is not suited, and frequently unsafe for vessels proceeding on a long voyage, or requiring to use ballast in a foreign port as damage for the return cargo.
- XIX. They are.
- XX. The general opinion is that the Irish lights are and have been well managed. I cannot speak so con-

fidently of buoys and beacons.—I would wish to state that in the above replies I confine myself strictly to the charges attaching to lights, buoys, and beacons, as there are charges levied as port charges in this port which I have always considered unjust and indefensible, and highly injurious to the trade and trading energy of the port.—12th January, 1860.

59.

- I. Wm. Nolan, merchant and shipowner, Wicklow.
- II. WICKLOW.
- III. The Ballast Board of Dublin, for the County Wicklow, Commissioners for the Harbour.
- IV. The coast is well buoyed and lighted, but I would suggest a buoy to be put on the Horse Shoe Bank.
- V. With the exception of the above, I do not consider any improvement could be suggested.
- VI. The south end of the Horse Shoe; the buoy to be red, to distinguish it from the Arklow Bank buoy; the reason for preferring the south end is, that it is further out, and the north end being close to Wicklow Head.
- VII. Oil in the Wicklow Head lighthouses, and gas in the harbour light.
- VIII. No instance of this has occurred; the lights are well attended to, and brilliant.
- IX. I am not aware of any of the buoys having been displaced.
- X. Many vessels have struck on the Horse Shoe.
- XI. Tide signals are not used, nor are they required.
- XII. The same observation applies to this question.
- XIII. No buoys used in the port of Wicklow.
- XIV. None.
- XV. Local dues are charged for mooring posts and quays, being corporate property.
- XVI. I do not know of any complaint.
- XVII. That they are quite sufficient, and carefully attended to.
- XVIII. All persons belonging to the town pay once a year; persons not belonging, pay for each voyage; the strangers object to any difference being made.
- XIX. They have been so applied, but are not adequate to the requirements of the port.
- XX. There is but one opinion on the subject, that they are well managed.

60.

- I. Dunn Newman and McDaniel, agents to Lloyd's.
- II. KINSALE.
- III. Under the control of the Ballast Board.
- IV. Sufficiently lighted, but require buoys on the Spit, Spur, and Wrinkle banks, also four warping buoys, two at each side of the new bridge now erecting over the Bandon River to enable vessels to warp through the portcullis.
- V. One buoy on Bullman Rock which is quite suitable.
- VI. The one recommended on the Spit is in the upper harbour, the other two are between the Old Fort and Money Point.
- VII. Oil.
- VIII. None to our knowledge.
- IX. Never heard of any.
- X. None to mention.
- XI. None used and none required.
- XII. Not used and not wanted.
- XIII. Bullinan's Rock buoy red, conical, and the only one.
- XIV. No.
- XV. Dues on the harbour light and paid to the Ballast Board.
- XVI. None to our knowledge.
- XVII. Lights sufficient but buoys wanted as before suggested.
- XVIII. Never heard any complaint.
- XIX. Yes.
- XX. No.

IRELAND.
Circular VI.

EVIDENCE OBTAINED THROUGH LLOYD'S AGENTS.

61.

- I. Robert Lander, of Kinsale, shipowner.
- II. KINSALE.
- III. Under the control of the Ballast Board.
- IV. Sufficiently lighted, but require buoys on the Spit, Spur, and Wrinkle banks, also four warping buoys, two at the side of the new bridge now erecting over the Bandon River to enable vessels to warp through the portcullis.
- V. One buoy on Bullman Rock which is quite suitable.
- VI. The one recommended on the Spit is in the upper harbour, the other two are between the Old Fort and Money Point.
- VII. Oil.
- VIII. None to my knowledge.
- IX. Never heard of any.
- X. None to mention.
- XI. None used and none required.
- XII. Not used and not wanted.
- XIII. Bullman's Rock buoy red, conical, and the only one.
- XIV. No.
- XV. Dues on the harbour light, and paid to the Ballast Board.
- XVI. None to my knowledge.
- XVII. Lights sufficient, but buoys wanted, as before suggested.
- XVIII. Never heard any complaint.
- XIX. Yes.
- XX. No.

62.

- I. Richard Huges, sub-agent Lloyd's, ship chandler, &c., Crookhaven.
- II. CROOKHAVEN.
- III. Trinity Board, Dublin, one light keeper on spot.
- IV. No.
- V. A light on Alderman Rocks, and buoy on Sunken rocks inside Small Rock, called the Black Horse.
- VI. On extreme outer or eastern point of Alderman rocks the present light being on the main land, and considerably to the westward of outer edges of Alderman, there being an opening in said main, it appears to vessels coming from westward, thereby endangering vessels who should run for said light, the rocks being low and not discernible from glares of light until too late for strangers to clear it—the present light could be dispensed with if placed on Alderman.
- VII. Oil.
- VIII. No complaints.
- IX. None displaced.
- X. Two vessels on shore on Alderman; one vessel on said rock from want of buoy.
- XI. Not used or required.
- XII. Required at lighthouses; none used at present.
- XIII. None.
- XIV. None.
- XV. Dues of light paid to Ballast Office and not collectors here. No dues on shipping whatever.
- XVI. Complaints to the Ballast Office, Dublin, respecting light on Alderman.
- XVII. Complaints by residents and ship masters of light being placed where it now is, and want of light on said Alderman Rocks.
- XVIII. Excessive.
- XIX. I believe so.
- XX. None.

63.

- I. J. H. Swanton, J.P., Lloyd's Agent, merchant, Skibbereen, Ireland.
- II. Port of SKIBBEREEN, and part of SOUTH-WEST COAST OF IRELAND.
- III. Trinity Board, Dublin.
- IV. No.
- V. To place a light on Galley Head, more necessary now, since the light on Cape Clear has been removed to the Fastnet Rock. 2. To repair the old tower on Horse Island, at the entrance of Castlehaven Harbour, and to keep it regularly whitewashed. 3. To place a buoy on Bulbig Reef, inside of Cape Clear. 4. To have a beacon placed to mark best passage through Gascanane Sound, between Cape Clear and Shirkin Island. 5. A buoy on west end of Tourane Rocks. 6. A buoy on the Amelia Rock. 7. A buoy on Moore's Rock in entrance to Roaring Water Bay.
- VI. On Galley Head a light, for the reason given in answer to No. V., and because of the Doolig Rocks (which are very dangerous) being near Galley Head.

I beg to call particular attention to the want of a buoy on the Bulbig Reef inside of Cape Clear, and that the passage through Gascanane Sound (east end of Cape Clear), should be marked by a beacon, i.e., the best passage pointed out by a beacon. Also a buoy should be placed on the west end of Tourane Rocks, between Horse Island and East Calf, in Long Island Bay. Also a buoy on the Amelia Rock, at the east entrance of Long Island Sound, near Castle Island. Also a buoy on Moore's Rock in entrance to Roaring Water Bay, between Carthy's and Horse islands; all the above rocks have at one time or other done injury to vessels.

- VII. Oil at Fastnet light.
- VIII. No complaints.
- IX. None.
- X. A vessel struck lately at night on the Doolig Rocks and had there been a light on Galley Head she would not have struck.
- XI. No, none required.
- XII. No.
- XIII. None.
- XIV. No.
- XV. No local dues.
- XVI. No complaints that I am aware of.
- XVII. See V and VI.
- XVIII. I cannot say.
- XIX. So far as I know they are.
- XX. No.

64.

- I. Henry Benner, Bridge Place, Tralee, general merchant, Lloyd's agent.
- II. TRALEE.
- III. The Dublin Ballast Board have charge of the lighthouse on Samphire Island. The Tralee Harbour Commission have charge of the buoys.
- IV. I consider that the light is not sufficiently well lighted; the buoys are sufficient.
- V. The light to seaward being red is not of sufficient magnitude to be seen at any distance.
- VI. I do not conceive that additional lights, &c., are required.
- VII. Oil.
- VIII. I have not heard of any of these having happened.
- IX. I have not heard, unless a very heavy storm may break one occasionally, which is immediately replaced. No accident has occurred in consequence.
- X. I know of none.
- XI. None are used, nor do I see any necessity for them.
- XII. None used or required.
- XIII. Black casks; all arranged on south margin of channel.
- XIV. No.
- XV. I am not aware of any local dues being levied in respect of either of these.
- XVI. Complaints have been frequently made of the insufficiency of the Samphire light by masters of vessels and steamers frequenting this port; reported, if I do not mistake, to the Dublin Ballast Board, without result.
- XVII. All complain of the light.
- XVIII. I have heard of no complaints.
- XIX. Nil.
- XX. Generally considered all well managed.

65.

- I. Robert McCarthy, Tralee, harbour master.
- II. TRALEE.
- III. Ballast Board, Dublin, management of the lighthouse; Harbour Commissioners, arrangement of the buoys.
- IV. I do not consider they are sufficiently lighted; I consider the buoys are sufficient.
- V. I consider the light is bad, and cannot be seen far at sea.
- VI. I do not consider any are necessary.
- VII. Oil.
- VIII. I am aware that the light, such as it is, has been carefully attended to and duly exhibited, and that no accident has occurred through neglect.
- IX. The buoys are regularly attended to, and no accident has occurred in consequence of them.
- X. I know of none.
- XI. There are no tide signals, nor do I think any are required.
- XII. Same answer as No. XI.
- XIII. Painted black, cask shape; laid down on the south side of the channel.

EVIDENCE OBTAINED THROUGH LLOYD'S AGENTS.

- XIV. I would not recommend any change.
 XV. I know of no dues levied as a local charge, either for lights or buoys.
 XVI. Several masters of sailing and steam vessels have complained of the obscurity of the Saphire light, which was, I believe, reported to the Ballast Board without success.
 XVII. The general feeling is that the light is bad and requires to be improved.
 XVIII. I heard no one complain at any time.
 XIX. They are.
 XX. I believe the general opinion to be that they are all well managed.

66.

- I. William Blair, Kilrush, merchant.
 II. River SHANNON, near KILRUSH.
 III. None.
 IV. No.
 V. Buoys required about Deal, and a light on Scatting Island.
 VI. Light on end of quay for safety of vessels and steamers arriving at night.
 VII. Nil.
 IX. The buoys that were put on Deal are all gone.
 X. None to my knowledge.
 XI. None used.
 XIII. None.
 XVII. Is in favour of a light on Scatting, and another on end of quay.
 XVIII. None.

67.

- I. John Fitzgerald Studdart, Rear-Admiral, Port Clane, Pella, Kilrush.
 I. The River SHANNON, principally KILRUSH.
 III. Know of none.
 IV. Not sufficiently.
 V. The north entrance or channel into Kilrush Harbour requires a light of some sort. Both it and the eastern entrance require buoys to indicate the commencement of shoals, but especially on the Half Rock which fouls both anchorage and channel.
 VI. In addition to No. V question buoys are required on the shoaling south of Hogg Island, and on sunken rocks in the vicinity of Scatting Roads.
 IX. Buoys were formerly judiciously placed along the east end of Beal Bar, a most dangerous shoal, but at the same time the great protection, as a break-water, to the River Shannon. They have been long since either removed or destroyed. They should be replaced, and directions issued by the Admiralty to the revenue cutter stationed in the river to see to their protection.
 XI. Tide signals, and a small light at the head of the pier at Kilrush would be attended with benefit, one to indicate the height of the water, the other to guide in.

68.

- I. Wm. Keown, merchant, Burton Port, Ardra.
 II. RUTLAND HARBOUR, BURTON PORT, ARRANMORE, and BOYLAGH BAY, NORTH-WEST OF IRELAND.
 III. Trinity Board, Dublin.
 IV. No.
 VI. The light should be placed in the same position as the old one on the island of Arranmore, only a little more elevated, so that it might be better seen. A buoy is much required on the Blind Rock at the south-west of Rutland Harbour; the beacons are all right.
 VIII. The light on Arranmore has been extinguished for the last 18 years, during which time there have been a number of wrecks on the island and in Boylagh Bay, the greater number of which has been attributed to a want of a light. In 1856, the ship "Marchioness of Clydesdale," 1857, the ship "City of Worcester," total.
 XI. Not required.
 XII. Not required.
 XIII. Beacons round, red and black.
 XIV. No.
 XV. None.
 XVI. The attention of the Board has been called to the want of a light, as I understand they have determined to relight it as soon as possible.

- XVII. The mariners frequenting his place and coasting are all most anxious to have the light—also all the shipowners on the north-west coast.

69.

- I. Samuel Casidy, agent for Lloyd's, Killybegs.
 II. KILLYBEGS.
 III. Captain Roberts, R.N., Ballast Board, Dublin.
 IV. I consider that the harbour of Killybegs is sufficiently lighted, buoyed, and beaconed, but the small adjacent harbour of Bluckless to the south-east and the bay of Fintras to the north-west is not.
 V. I do not think any change is necessary, in either the position, or otherwise, of the present lights and buoys.
 VI. I would recommend a buoy or beacon on the Black Rock in the bay of Fintras, as this rock is quite covered at high water, and lies directly in the way of vessels working up to the harbours of Killybegs and Bluckless, and also two or three perches or beacons are very much required, indeed on some half tide rocks in the harbour of Bluckless. The trade of this small port (Bluckless) in the last ten years rapidly increasing, particularly in bread stuffs.
 VII. Oil is the material in use in the harbour lights on Killybegs and the adjacent lights of St. John's Point and Rathlin O'Birn Island.
 IX. The buoy on the shoals off St. John's Point, called Bullock More was displaced about 12 months ago, but has since been replaced, and no accident occurred.
 X. Vessels have perpetually touched and strained on the half rocks in Bluckless Harbour, called the Buck Rock and the Flat Rock, from want of beacons or perches thereon.
 XI. Not at all required.
 XII. Not required.
 XIII. There are in the harbour of Killybegs three buoys, coloured red, white, and black respectively, of a conical form, placed on a sand bank, one at each end, and one in the centre.
 XIV. No changes requisite.
 XV. No local dues, with the exception of the usual light dues, which are collected by the chief boatman of Coast Guard, and paid by him to the Collector of Customs, Sligo.
 XVI. None to my knowledge.
 XVII. Very good, indeed, as far as the harbour of Killybegs is concerned; but I have very often heard wishes expressed that the beacons in the harbour of Bluckless and the bay of Fintras were placed as I have suggested.
 XX. I am not aware of any complaints as to the management of the present lights.

70.

- I. George McGowan, Rathmullen, Co. Donegal, sub-agent for Lloyd's.
 II. LOUGHSWILLY.
 III. Ballast Board, Dublin.
 IV. Not sufficiently buoyed; well lighted.
 V. Three buoys required; two on west shore, viz., Macamus Point, Kinnigar Ridge; one on east side Carrigullan Rock, which have, I believe, been recommended by Capt. Bedford, R.N., lately surveying here.
 VI. Three buoys, viz., Macamus Point, Kinnigar Ridge, and Carrigullan Rock.
 VII. Faint light; oil.
 VIII. No.
 IX. Linsport buoy broke adrift, but was replaced immediately; one always kept in readiness; no accident occurred.
 X. None.
 XI. None wanted.
 XII. None required.
 XIII. One black buoy at Linsport; iron perch on Swilly Rock.
 XIV. None.
 XV. Not sure of the sums; received by the chief boatmen of Coastguard at Ramelton.
 XVI. None.
 XVII. Good, with exception of the buoys named being required.
 XVIII. No complaints.
 XIX. I believe they are.
 XX. Not aware of any.

EVIDENCE OBTAINED THROUGH LLOYD'S AGENTS.

IRELAND.
Circular VI.

71.

- I. Alexander M'Crea, Maddison, Doe Castle, Creeslonga, Strabane, Ireland, gentleman, agent for Lloyd's for the Association of Underwriters, Glasgow, and Liverpool.
- II. DUNFANAGHY.
- IV. I do.
- VII. There is no harbour light, nor is there one required; it is a bar harbour, and no lights or buoys would make it accessible by night.
- XI. Not required.
- XII. Not required.
- XIV. I think the buoys are sufficiently well adapted to the navigation, inclined buoys are of very little use as the channel is always changing.
- XV. None.
- XVII. I have never heard of an opinion expressed; very few vessels enter this harbour, and those only of the very smallest class.

72.

- I. Daniel Fall, shipbroker, sub-agent for Lloyd's, Portrush.
- II. PORTRUSH.
- III. No lights, buoys, or beacons.
- IV. No.
- V. None to be improved.
- VI. Lighthouse on Skerries; beacon on Stirk's Rock. Two mooring buoys in Skerries Roads wanted, and would be of use.
- VII. Very faint oil lamps used on pier heads, sometimes to assist steamers in only.
- VIII. Never exhibited, except on nights when steamers are expected, and of very little use. The steamboat companies have themselves provided a grate, which in very dark weather have lighted at their own expense, and placed on north pier head.
- IX. None.
- X. Cannot distinctly state that any accident could be attributed to any of the above wants, though wrecks have often taken place on Skerries.

- XI. Not required.
- XII. Not used, and do not think required, as fogs are not prevalent.
- XIII. None.
- XIV. None.
- XV. None.
- XVI. Not aware of any.
- XVII. Have heard master mariners express an opinion about necessity of light on Skerries.
- XVIII. No local dues.
- XIX. No local dues.
- XX. Nil.

73.

- I. Rob. Gage, jun., Rathlin Island, Ballycastle, Ireland.
- II. RATHLIN ISLAND.
- III. The Ballast Office Commissioners. Dublin
- IV. Yes.
- V. I can suggest no improvement.
- VI. I don't recommend any additional lights or buoys.
- VII. I am told rape oil is used in the lighthouse on this island.
- VIII. I believe the light has constantly been exhibited since it was first lighted.
- IX. There are no buoys at or near this island.
- X. I cannot mention any accident; I consider the place sufficiently well lighted.
- XI. There are no tide signals used, and I do not consider that any are wanted.
- XII. None are used and none are required.
- XIII. There are none.
- XV. No dues of any kind as mentioned are levied.
- XVI. I know of no complaints since the light on this island was exhibited.
- XVII. I have heard masters of passing steamers say, the light here was quite sufficient.
- XVIII. No local dues in respect of lights, buoys, or beacons are collected here.
- XIX. None are collected here.
- XX. I am not aware of any opinion on the subject.

LIST OF AUTHORITIES

HAVING CHARGE OF

LIGHTS, BUOYS, AND BEACONS,

IN THE UNITED KINGDOM.

(SO FAR AS THE COMMISSIONERS WERE ABLE TO ASCERTAIN) TO WHOM FORMS WERE
SENT TO BE FILLED UP.

NOTE.—Those marked * have not furnished Returns, thus—

Hayle.*

The Headings of the columns show the Circular and the particular question under which the information is given, thus, the heading—

Character.
Circular III. 21.

shows that throughout the returns the character of the illuminating apparatus of every lighthouse named, will be found under question No. 21 in the replies to the Special Lighthouse Returns, Circular No. III.

o means none. * means no information given.

At the end of the Local Returns at page 424 a further list is given of those Local Authorities which were not mentioned in the lists first obtained by the Commissioners, but whose names appear in this Appendix, or in former Parliamentary Returns, or whose lights have been seen by the Commissioners, or whose lights appear in the Map published by the Board of Trade, or are mentioned in the Admiralty Lists, or elsewhere, but are not included in this List, or in the Returns rendered by Local Authorities.

So far as can be ascertained from all these sources of information, there are in the United Kingdom 171 Authorities acting separately in the management of Lights, Buoys, or Beacons, not including the three General Authorities.

ENGLAND.

1. ABERDOVEY.

LLOYD'S EVIDENCE.

- I. Edward Price, Aberdovey, slate shipper, sub-commissioner of pilots, Trinity House buoy agent, and Lloyd's agent, retired master mariner.
- II. ABERDOVEY, CARDIGAN BAY.
- III. No harbour dues. All vessels coming into port loaded, pay in the Custom House halfpenny per ton voyage, outward payable at their port of discharge, unless bound foreign. British ships bound in and out pay double.
- IV. No; a standing light on Aberystwith Pier is much wanted; also a lightship, four miles W. by S., from Carn Badrig Reef.
- XIII. Black buoy at the entrance of the bar, red inside. The form of buoys are can and nun.

2. ABERYSTWITH.

On the 21st of November, 1859, the secretary was directed to forward the following extract from the "Shipping Gazette" to the harbour trustees at Aberystwith, and to say that the Commissioners would be greatly obliged if the trustees would inform the Commissioners whether the statement contained in the extract was substantially correct.

The slip was returned with the following reply:—

Aberystwith,

24th November, 1859.

SIR,
In reply to your communication of the 21st instant, I beg to inform you that the enclosed extract contains a correct statement of the substance of the inquiry to which it refers.

I am, Sir, your obedient servant,

GEO. MORICE,

J. F. Campbell, Esq., Clerk to the Trustees of the
Secretary to the Aberystwith Harbour.
Royal Commission of Lights, &c.
London.

"THE LATE GALE.—INQUIRY INTO THE CONDUCT AND DISMISSAL OF THE ABERYSTWITH HARBOUR MASTER.

"Aberystwith, Nov. 10.

"The harbour trustees of this port—Mr. E. L. Pryse, M.P., Lord Lieutenant, in the chair—held a meeting at the hall, to inquire into the conduct of Mr. Page, the harbour master, on the evening of the 25th ult., for not having exhibited lights on the pierhead after dusk, by which, it was alleged, several vessels were lost. A meeting of shipowners, masters, and others of the port, had previously adopted the following resolutions:—"That it is our decided opinion that, for the future safety of vessels coming into this port, a fixed bright light is essentially requisite to be put up at the extreme end of the pier, and two guide lights on the white marks opposite the entrance to the harbour—the former to be lighted, from sunset to sunrise all the year round, and of such brilliancy as may be seen at a distance of at least 12 miles, and the latter to be lighted from half flood to half ebb every tide."—"That the harbour master, in not exhibiting a light on the pierhead on the night of the 25th ult., after being repeatedly warned that vessels were outside the port, has been guilty of most culpable neglect—a neglect which it is feared has led to mournful results; and while fully appreciating Mr. Page's past services, we are firmly convinced that at the present time, in consequence of age and infirmity, he is wholly incapacitated for fulfilling the onerous and highly important duties pertaining to his office."—A memorial, embodying these resolutions, was signed by 110 shipowners and master mariners.

"The chairman having opened the proceedings, "Captain Davies, master of the brig 'Bessie,' of Aberystwith, said he saw a ship's light about a mile off, from half-past 6 to 7 o'clock on the evening of the 25th ult. There was no light on the pierhead. There was sufficient water

ABERYSTWITH.

for a ship to come in, and he was positive that a vessel could have come in if there had been a light on the pierhead. Watched the light for three quarters of an hour.

"Mrs. Jones, wife of Captain William Jones, said Mrs. Morgan, wife of Captain Morgan, came to their house about half-past 7 on the night of the gale, saying there was a patent light out. Went to the harbour master's, and heard his daughter tell him there was a light out. They were talking about sending for John. In an hour afterwards saw there was no light on the pier, and, with Edward Humphreys, went to the harbour master's. Asked him, 'Where is the light?' and he said something about sending for John. Was positive she saw the light within a very short distance of the pier. At 11 o'clock there was no light visible either on the pier or out at sea.

"Edward Humphreys, mariner, said: About half-past 6 on the night of the 25th, saw the light of a vessel which was coming down towards the pier. There was no light on the pierhead. Saw one man holding a light in his hand. She had three lights, and was sufficiently near to hail her in fine weather. Told Mr. Page that a vessel had been out for two hours, and that it was a pity to see her in such distress. Page said, the only way to have her in was to look for John. Asked who was to pay him, but he went to look for John. Saw the light about half-past 9, and the vessel was pitching about in great distress.

"Captain Enos, master of the 'Victoria' (wrecked at Newquay during the gale of that night), said: We were in company of the 'Margaret Lloyd' and 'Morning Star' (the vessels lost) on the morning of the 25th, from St. Tudwell Roads. The 'Britannia' (also lost); the 'Swansea Trader,' of Aberystwith; the 'Eliza Mary,' of Newquay; and others, were also with us. The last time I saw the 'Margaret Lloyd' was between 5 and 6 o'clock in the evening, opposite Pendenis. I was three quarters of a mile to leeward of her; wind E.N.E. In about three quarters of an hour afterwards, when it was quite dark, and the storm increasing, I saw the lights of the 'Margaret Lloyd' in such a position as would enable her to fetch the harbour in safety. If there had been a light on the pier I am positive she would have been in. I should have made an attempt myself to come in if there had been a light. The 'Morning Star' would also have attempted to come to this harbour if the lights had been exhibited. I showed a light occasionally myself. All the vessels but the 'Margaret Lloyd' were to leeward of me. There was plenty of water, and I had no doubt in my own mind but that the 'Margaret Lloyd' was safely in the harbour by 7 o'clock.

"Captain Rees, of the 'Britannia,' said he saw the 'Margaret Lloyd' tacking for the bar, and there was sufficient water, and he saw her lights in such position as would enable her to enter the bar.

"Mr. Watkins, mate of the 'Bessie,' said he saw the light on the evening of the 25th, about three quarters of a mile distance. She could have been in had there been lights on the pierhead. Saw the light from half-past 6 to 10. She was tacking about as if in great distress. No light was exhibited on the pierhead.

"Mr. Page was then called upon for his answer, and he said that on the evening in question, about half-past 6, Humphreys called upon him, and said there was a light out at sea, and he asked him to go and tell John. Waited all the evening watching for the appearance of the lights. It was the duty of John Davies and Thomas Davies to put up the lights. They were employed for that purpose. Did not send a messenger to John Davies to know the reason why the lights were not put up. Looked seawards, and saw no lights out at sea; and if there were a vessel so near on that night as had been stated, she must have gone on shore. Seeing no lights out at sea, nor any exhibited on the pierhead, went to bed at 10 o'clock, under the impression that all was right.

"John Davies said no one ever told him to put up the lights that night, and he saw no light out at sea.

"Thomas Davies, the other servant, said he saw no light.

"The trustees then retired, and, after some consultation, the chairman said: Mr. Page, it now becomes my painful duty to give the result of the deliberations of the trustees in this unfortunate matter, which I will do by simply reading the resolution passed. Painful, I say, because, so far as I

ABERYSTWITH.
Correspondence, &c.
Commissioner

ABERYSTWITH AND ADMIRALTY.

understand, you are an old and valued servant of the trustees, and no complaint had ever before been laid against you, and the trustees are all extremely sorry for the present unhappy occurrences which have led them to pass the following resolution:— It is unanimously resolved, that the trustees are of opinion that on the night of the 25th ult. the harbour master was guilty of gross neglect of duty in not putting up the pier and guide lights, and that he be forthwith dismissed.

With regard to the future lighting of the pier, referred to in the memorial, it was resolved that the whole subject be referred to a committee."

3. ADMIRALTY.

No General Return has been furnished by the Admiralty.

BEREHAVEN, BANTRY BAY.

LLOYD'S EVIDENCE.

- I. Robert Puxley, Oak Lodge, Castletown, Berehaven, agent to Lloyd's, and purser to the Berehaven Mining Company.
- II. BEREHAVEN, BANTRY BAY.
- III. The Lords of the Admiralty, London; the Trinity Board, London; the Ballast Board, Dublin. The Ballast Board, subject to the Trinity Board, have control over the Roan Carrig light, the Hornet Buoy, and the perch on Dog Rock and Sound Rock. The other buoys were supplied by and are kept in repair by the Admiralty.
- IV. Not sufficiently lighted, buoyed, or beacons.
- V. The position and size of existing buoys and beacons, and the colour of the light on Roan Carrig is good; but additional lights, buoys, and beacons, are indispensably requisite. See answer No. VI.
- VI. I would strongly recommend a light to be placed on the tower recently erected on the west end of Bere Island. It would be visible to vessels sailing from north or west, when Roan Carrig light would not be perceptible. The west entrance would then be safe of ingress or egress with favourable winds, and the risk of sailing round Bere Island would be avoided. A blind harbour (Pulleen) very much resembling, and near to, has been frequently mistaken for the west entrance to Berehaven. A light, which it is intended to erect on the Calf Rock off Dursey Island, I would recommend to be placed on the Bull Rock. To a vessel sailing from a northerly direction, the view of a light on the Calf may be intercepted by the Bull and the consequence be fatal. In a storm the Calf is completely washed; it will be difficult to erect a tower on it, and when erected, more liable to destruction. The Bull is sufficiently high to be safe; I will furnish some materials—sufficient space for a dwelling and yard; possesses all the advantages, but not the disadvantages, of the Calf. A beacon (perch) 25 to 30 feet high, with a barrel head, on the east point of the Colt Rock off Dunbay Castle, and a similar one on Privateer Rock, I consider indispensable. Both are half-tide rocks in deep water, and on which vessels are very liable to strike; and a bell buoy to be placed near each the Ducallow Rock and the Dog Rock, both near the eastward entrance, and very dangerous.
- VII. Rape oil.
- VIII. The Roan Carrig light, the only one on this part of the coast, has been uniformly exhibited since it was first lighted.
- IX. About two years since, a buoy near the Dog Rock was destroyed by a storm; not replaced since.
- X. The schooner "Eliza," of Milford, was wrecked on the Dog Rock in the spring of 1852. The "Amphitrite," C. G. Cutter, struck on the Colt Rock in daylight; was injured and very nearly lost. Her Majesty's ship "Trincola," struck on the Privateer Rock, lost her false keel, was otherwise injured, and with much difficulty was got off. The brig "Martin," of Limerick, the "David Grant," of Arbroath and other vessels have mistaken Pulleen, a blind harbour, much resembling, and near to, for the westward entrance of Berehaven; and some fishing boats and whole crews have been lost on the Ducallow.
- XI. None are used or required.

BEREHAVEN, BANTRY BAY.

ADMIRALTY.

- XII. There are none in use; two are requisite, viz., one near the Ducallow Rock, and one near the Dog Rock. I would recommend bell buoys.
- XIII. The Harbour Buoy at westward entrance, red; Sir Walter Scott Buoy white; Volage Buoy white; Hornet Buoy black, and name painted white; Curryglass Buoy black. The beacon or perch on Sound Rock, entrance to basin or inner harbour, cone-headed, black. Perch on the Dog Rock black. The buoys are inverted cones. White buoys to be kept on the north.
- XIV. See answers Nos. VI. and VIII.
- XV. None that I am aware of.
- XVI. There has not been any concerning the management, but several have been, as to the insufficiency, with reference to the Dog, Ducallow, Colt, and Privateer Rocks.
- XVII. The general feeling is most decidedly that the existing lights, buoys, and beacons are good, but insufficient in number for safe navigation. Mariners very much dread the Ducallow—a very treacherous rock, and the Dog Rock, a long, dangerous reef.
- XVIII. There is no grievance to complain of.
- XIX. There are no local dues.
- XX. The opinion is, that the lights, buoys, and beacons in existence are well managed.

DEPTFORD.

Deptford Yard,
18th February 1860.

GENTLEMEN,
The Lords Commissioners of the Admiralty having directed me to fill up the enclosed forms, and transmit them to you, I beg to state that there are no buoys, beacons, or lighthouses at this port or part of the Thames.

I have, &c.

(Signed)

C. H. M. BUCKLE,
Captain Superintendent.

The Commissioners on
Lights, Buoys, and Beacons.

DEVONPORT. See PLYMOUTH, p. 287.

PLYMOUTH.

LIGHTHOUSE.—(SPECIAL RETURN.)

Circular III.

- I. Breakwater, Plymouth.
- II. Trinity House, London.
- III. Mr. Ditcham, Cosside, Plymouth.
- IV. One large and one small.
- V., VI. Apply to Trinity Board.
- VII. To prevent vessels running on west end of Breakwater entering the Western channel.
- VIII. 1st June 1844 or 1845.
- IX. Walker and Burgess.
- X. Sea.
- XI. Granite.
- XII. Yes; common principle.
- XIII. About 77 feet.
- XIV. 1st light, 70 feet; 2d, 60 feet.
- XV. About 12 miles.
- XVI. Never observed; but I consider from 10 to 12 miles.
- XVII. Never observed.
- XVIII. Fixed light. Red to seaward, and white showing the anchorage.
- XX. From sunset to daylight.
- XXI. to XXV. Apply to Trinity Board.
- XXVI. A bell.
- XXVII. to LVIII. Apply to the Trinity Board.

BUOYS AND BEACONS.

Circular V.

- I. Officers of Devonport Dockyard.
- II. Chart of Plymouth Sound herewith sent. The harbour master's jurisdiction is within the two red lines.
- III. The Admiral Superintendent, Devonport Dockyard.
- IV. Not any.
- V. The buoys are not classified; they are of one size. Sketch herewith sent.
 - a. Wood.
 - b. 27*l.* 12*s.*
 - c, d. 1*l.* 5*s.*
 - e. Seventeen.
 - f. Seventeen.
 - g. Devonport Dockyard, the whole of them.
 - h. Seventeen.
 - i. None.
 - k. With anchors.
 - l. 52*l.* Composed of old chain cable, and valued as worn chain.
 - m. Procured from dockyard and repaired there.
 - n. None but the colour, viz., black, white, red, and chequered.
 - o. Seventeen.
- VI. Conical.
- VII. Repaired annually.
- VIII. Examined annually at dockyard.
- IX. One on the east end of breakwater. One on the Hoe, white and red chequered.
- X. a, b. None; the above beacons belong to the Trinity Board, to whom application should be made.
 - c. One to keep ships clear of east end of breakwater. One to guide ships through the deep water channel under the Hoe.
 - d. One black, with the other chequered red and white.
 - e. Stone and wood.
 - f. No. 1, stone pedestal with a staff and black ball. No. 2, stone obelisk, chequered red and white, horizontal.
 - g. No.
 - h, i, j, k. Apply to the Trinity Board.
- XI. No change has been made here for years.
- XII. Entering the eastern channel from the southward; red buoys on the starboard hand, white and chequered black and white on the port side; beyond this there is no general rule.
- XIII. None.
- XIV. They are kept in repair by the Admiralty, and dues are not collected on their account.

PLYMOUTH.

PORTPATRICK.

ADMIRALTY.

Circular V.

- XVII. Not any.
 XVIII. Not any.
 XIX. By the Queen's Harbour Master in August of each year.
 XXI. Not any necessary, as the buoys, if disturbed, would be immediately replaced.
 XXH. Yes; the Queen's Harbour-master.
 XXIII. By letter or viva voce, as the case may be.
 XXIV. to XXVII. Not any.

PORTPATRICK.

SIR, Portpatrick Harbour, 27th February 1860.
 IN compliance with the directions of my Lords Commissioners of the Admiralty I beg to transmit the accompanying chart and returns duly filled up for this harbour.
 I have, &c.

 The Secretary Royal Commission Capt. R.N.
 on Lights, Buoys, and Beacons.

time, and then passed to the Northern Light Commissioners, by whom De Ville's apparatus was removed, and the Bude light adopted instead. The light continued to be exhibited from the new tower till January 1839, when, in a heavy storm, the pier head was breached, and the light tower undermined. The light was of necessity extinguished, and that in the old tower, with its inferior apparatus resumed and continued till the final extinction, December 1852.

The pier head was repaired by 1842, and the tower rendered more secure than before; but the light has never been re-lit.

A heavy sea breaks over the tower in gales, and, if used there should be two light-keepers to relieve each other, and a passage to the entrance door covered over.

There is no apparatus in the tower now.

I am, &c.

(Signed) EDW. HAWES, Capt., R.N.,
 General Superintendent.

Admiral W. A. B. Hamilton,
 President Royal Commission
 on Lighthouses.

Circular 11.

SIR, Portpatrick Harbour, February 1860.
 I BEG leave to submit the following statement in reference to the lighthouses at this harbour.
 There are two lighthouses on the south pier at this harbour.
 The inner or old tower at the eastern end of the pier, on a site which was formerly the sea extremity of the works.
 The new or outer tower at the pier head of the south pier, and 391 feet seaward or in advance of the old one.

OLD TOWER.

The period at which the old tower was erected is not known. A peat fire was originally burnt on the site of this tower, as early probably as 1680, as a guide to the small craft then employed for the Post Office service. The tower and light were known to exist in 1760. In 1774 the pier—"Old pier,"—adjoining the tower, was repaired by "Smeaton" by a grant from the Post Office, and it is probable the light tower was built under that department.

The tower is small, exceedingly cramped, is of small whinstone and lime, coated with lime and sand, and although painted or coloured annually takes damp.

The light chamber is 6ft. 6in. in diameter and 6ft. 10in. in height, is of a hexagonal form. The glazed lantern four feet in height, with an arch formerly of 160, but increased by us to 204, to admit the light further round the tower.

The light apparatus consisted of mirror glass fixed in parabolical moulds of plaster as reflectors, 6 lamps with broad wicks but without glass chimnies, and the glazing of the lantern consisting of small panes of common window glass, with a mass of woodwork framing, forming a very inferior light, and which we felt it to be during the Packet Service. This tower and light were under the management of the Northern Light Commissioners. It was discontinued between December 1836 and January 1839, while the new lighthouse was in use. In January 1839 this old tower was again lit by the Northern Commissioners, but with the same inferior apparatus, and continued burning till December 1852, when it was finally extinguished by that Board, and the materials of the light removed. After a long correspondence on the part of the Treasury, Admiralty, and the Commissioners relative to the light being removed to the new tower, January 1853, the old tower passed to the charge of the Admiralty, and was re-lit October 1856, with the dioptric 6th order apparatus now in use. The lantern remains the same, there being the possibility of the new tower being used as soon as the Packet Service is resumed.

NEW TOWER.

The new lighthouse on pier head was built by Sir John Rennie, C.E., under the Commissioners for the harbour, and under their establishment, by day-labour work. It is of the best description of the Anglesea limestone, closely jointed, the masonry at the base being 4 ft. 4 in. thick, has a commodious stone staircase, a storeroom on the ground floor, and is a superior edifice. It was completed in 1836, when De Ville's superior apparatus was fitted in it, and the light exhibited December 1836.

The light chamber is 5 ft. 10 in. in diameter, 8 ft. 6 in. in height, and the glazing of the lantern 4 ft. 6 in. in height, and round the entire circle the glass of a superior kind, the panes 18½ inches square.

The light was altogether of a superior character, and was exhibited, under the Harbour Commissioners, for a short

LIGHTHOUSE.—(SPECIAL RETURN.)

Circular

- I. Portpatrick Harbour, Scotland.
- II. Admiralty, Harbour Department.
- III. Captain Hawes, R.N., General Superintendent under Admiralty.
- IV. Two lighthouses; but only one lit, which is the inner or old tower. New tower stands on south pier-head, 391 feet in advance.
- V. Unknown.
- VI. Unknown.
- VII. For the old tower unknown, but probably from its position, being the outer part of the then pier, and well situated. New tower, from its more seaward position.
- VIII. Old tower unknown; probably before 1750. First under the Admiralty, October 1856. In new tower, December 1836 till January 1839.
- IX. Old tower unknown. New tower, Sir John Rennie. Day labour, under Harbour Commissioners.
- X. Harbour.
- XI. Old tower, solid of whinstone and lime, coated with rough-cast, white. New tower, Ashlar limestone, solid, colour of the stone; not coated.
- XII. No.
- XIII. Old tower, 37 feet; new tower, 54 feet.
- XIV. In old tower, 40 feet.
- XV. Old tower light, 9 to 10 miles in very clear weather, 7 to 8 in moderate clear weather.
- XVII. Old tower light; horizontal sea range 137° from S, by W. ¼ W. to N.N.W. ½ W., with additional 67° to N.E. ½ N. in harbour.
- XVIII. Fixed and natural.
- XIX. XX. Nil.
- XXI. Dioptric.
- XXII. Sixth.
- XXIII. Original apparatus in old tower was mirror reflectors, six lamps without chimnies, done away with in 1852, when tower passed to Admiralty; relit, with present apparatus October 1856. "See special statement."
- XXIV. Present dioptric, Mr. Wilkins, 25, Long Acre, London.
- XXV. Tunnel in top of cupola and door in lightroom with moveable circular ventilator.
- XXVI. None in use since packet service terminated.
- XXVII. Nil.
- XXVIII. Nil.
- XXIX. Not known.
- XXX. Finished.
- XXXI. Dimension of lantern:—

Old tower.		New tower.	
Diameter	6 ft. 6 in.	-	5 ft. 10 in.
Height of chamber	6 ft. 10 in.	-	8 ft. 6 in.
Glazing	4 ft.	-	4 ft. 6 in.
Cost unknown.			
- XXXII. No.
- XXXIII. Repairs before building came under Admiralty unknown; since 1853 none.
- XXXIV. Annual cost of painting lanterns and rails of both lighthouses, and colouring walls of old tower, about 4l. 10s., and done by Harbour Establishment.
- XXXV. One keeper, wages 1-ls. per week.

ADMIRALTY.
Circular III.

PORTPATRICK.

 XXXIX. Best colza oil, 1857, 5*s.* 6*d.* per gallon.
 „ „ 1858, 5*s.* and 4*s.* 9*d.* per gallon.
 XL. Cotton, circular, ¾ inch diameter. 1857, supply came with apparatus. 1858, 4*s.* 6*d.* per 12 dozen. Annual cost, 4*s.* 6*d.*
 XLI. None in use.
 XLII. Grants from Parliament for maintaining harbour; to Admiralty.
 XLIII. Nil.
 XLIV. 1858. Wages - - - £36 10 0
 Oil, wick, stores, and carriage 13 10 0
 Painting, &c. - - - 13 15 0
 Total - - - £63 15 0
- XLV. Nil.
 XLVI. Nil.
 XLVII. Nil.
 XLVIII. Nil.
 XLIX. Nil.
 L. By superintendent of harbour, who is always on the spot.
 LI. Frequently.
 LII. No.
 LIII. One spare lamp, with glasses, kept in harbour office. Oil supplied in quantities less than 20 gallons, and kept in store, floor of lighthouse.
 LIV. None.
 LV. None used. Harbour, since termination of packet service, has been nearly in disuse.
 LVI. None; reason as above. When harbour is again used, the new code of signals should be furnished.
 LVII. Only one, who is on duty through the night.
 LVIII. The light to be shown from sunset to sunrise; the exact time of lighting and extinguishing may, however, vary a little according to state of weather and atmosphere; the light to be kept clear and good. Great attention to trimming, and to keep glass of lantern clear; the lamp to be trimmed, apparatus and lantern in perfect order by noon, or 2 p.m., and anything requiring attention to be immediately reported to superintendent of harbour.
 A register kept of time of lighting and extinguishing, and hour burning; also of oil, wick, and other stores received and expended.
 The lightkeeper at present keeps a meteorological return for Board of Trade.

BUOYS AND BEACONS.

- I. Captain Hawes, R.N., General Superintendent of Portpatrick Harbour.
 II. Chart of harbour by E. Calver, R.N., 1857. Two buoys of log timber, placed temporary to mark limit of shoal water, and lead to basin, until proposed deepening of harbour is effected. One pole beacon for same purpose. Annual cost of maintaining them is about 1*l.*
 III. To the Admiralty.
 IV. The Admiralty are conservators of the harbour, under Lords of Treasury.
 V. One kind only used,—of common log timber.
 a. Log timber, trunnelled and bolted together.
 b. About 15*s.*
 c., d. For both buoys, about 10*s.* or 12*s.*
 e. Two.
 f. One.
 g. Harbour storeyard, one.
 h. One.
 i. The outer buoy displaced by sea in 1858, but replaced immediately.
 j. Heavy sea in the harbour.
 k. Chain clenched into Ashlar stone of great weight, or to iron weights.
 l. Nil.
 m. Made and repaired by harbour establishment.
 n. These buoys are within the harbour, which is so contracted that no mistakes can occur.

II.

PORTPATRICK.

- VI. These buoys are only suited for the temporary purpose and position to which they are applied.
 VII. These buoys are changed every summer to dry and recast with coal tar, and remove the effects of the worm, which is very destructive.
 VIII. The above.
 IX. Only one small pole beacon, placed temporary on the ground where old pier stood; until alterations in harbour are carried out.
 X. Only one, as above.
 b. 1856.
 c. To denote shoal ground where old pier stood.
 d. Seen above high water, and the only one.
 e. Wood pole.
 f. White, crossed red.
 g. No.
 h. About 24 feet to top of cross.
 i. Materials from harbour stores, value and labour 3*l.* 10*s.*
 j. in 1858 about 5*s.*
 k. None.
 XI. This harbour is at present nearly in disuse. The buoys and beacons are merely temporary to mark the shoal ground on the south side of the harbour, until contemplated improvements are carried out, when the packet service will be resumed. The buoys, if any, that may then be required, should be of the most approved kind.
 XIV. From grants made by Parliament for maintenance of harbour, through the Admiralty.
 XVI. Income, nil; expenditure in 1858, 11*s.*
 XVII. Nil.
 XVIII. Nil.
 XIX. Captain Hawes, the General Superintendent of the harbour; frequently.
 XX. Same.
 XXI. When buoy is displaced by gale it is immediately replaced.
 XXII. Yes, instantly, if weather permits.
 XXIII. The officer in charge of the harbour has power to keep these buoys and beacons in place; if any extra expense is required, he would refer to Admiralty.
 XXIV. Nil.
 XXV. None. The circumstances of this harbour does not give a field for such improvements.
 XXVI. None, further than removing each buoy in summer as stated in No. VII.

ADMIRALTY.

- IV. Yes.
- V. None.
- VI. None.
- VII. A new fixed light at Garrison Point, Sheerness; supplied with gas, first lit 1st March 1859, by direction of the Lords of the Admiralty, being at the entrance of the river Medway. It is 45 feet above low water mark. The gas is supplied from the Dockyard pipe.
- VIII. No.
- IX. No.
- X. None.
- XI. No.
- XII. No.
- XIII. All the same as they have been for years.
- XIV. No.
- XV. Dues for the Nore lights, paid to the Collector of Customs, Rochester.
- XVI. None that I am aware of.
- XVII. I believe mariners are quite satisfied therewith.
- XVIII. I have not heard of any complaint.
- XIX. Yes, I believe they are.
- XX. I believe the general opinion is that they are satisfactorily managed.

WOOLWICH.

BUOYS AND BEACONS.

(Not any at this Dockyard.)

Woolwich Yard,

18th February 1860.

SIR,
WITH reference to your minute of yesterday's date, on their Lordships' order of the 16th instant, directing the

WOOLWICH.

accompanying form to be filled up and transmitted, I beg to inform you, that we have no buoys and beacons, or lighthouses, under my jurisdiction at this dockyard.

I am, &c.,

JNO. McDONALD,

Master Attendant.

The Commodore Superintendent.

4. ALDBRO'.

LLOYD'S EVIDENCE.

- I. George Kersey, Aldbro', Suffolk, Trinity pilot.
- II. ALDBRO'. The harbour is very bad, being a bar harbour; the entrance 12 miles S.W. of the town. At Aldbro' Quay the river is 200 yards from the sea, and a depth of 25 to 30 feet at low water in the river.
- III. None.
- IV. Quite sufficient.
- V. I should suggest the buoy on Sizewell Rock be red, as there are no other between that and the Whiting Sand, or a better noose than it now is, for it cannot be seen now with a high sea running.
- VI. None.
- VII. Oil.
- VIII. None that I am aware of in this vicinity.
- IX. None.
- X. None.
- XI. Candles are put in the beacons to enter the harbour in very fine weather and free wind, as the tide sets right across the channel.
- XII. The same as are generally used.
- XIII. There are no buoys. The beacons black and white.
- XIV. A buoy at the entrance is requisite.
- XV. A yearly sum, I believe, is paid to the harbour-master for beacons and keeping such in repair.
- XVI. None.
- XVII. None respecting lights, buoys, or beacons, but the general opinion of all is that a new cut might be made into the river being so near the sea and a good harbour of refuge.
- XVIII. Not at all heavy.
- XIX. Yes.
- XX. The opinion is that every possible attention is paid to all buoys, lights, and beacons along this coast by the Honourable Trinity Board.

I. J. S. Gibson, Aldbro', Suffolk, Trinity pilot.

II. ALDBRO', the harbour of which is very bad, being a bar harbour; the entrance 12 miles S.W. of the town. At Aldbro' Quay the river is only 200 yards from the sea, and a depth of 25 and 30 feet at low water in the river.

III. None whatever.

IV. Yes.

V. The buoy on Sizewell Bank is part white, and in a strong sea cannot be very well seen; it might be red as there are no red buoys nearer than the Whiting Sand.

VI. None.

VII. Oil.

VIII. None in this neighbourhood.

IX. None.

X. None.

XI. Candles are put on the beacons to enter the harbour if very fine weather and free wind to enter, but it must be very fine as the tide sets across the channel.

XII. The usual fog signals are used off the coast.

XIII. None in the port nor none at the entrance.

XIV. There ought to be a buoy at the entrance under the control of the harbour pilots to remove as the channel shifts.

XV. A small sum yearly is paid to the harbour-master for beacons and repairs thereof.

XVI. None.

XVII. None respecting the dues, but all are of opinion that as the river is such a fine one and so near the sea, a new cut ought to be made at the Quay into Aldbro' Bay.

XVIII. Not the least heavy.

XIX. Yes.

XX. The opinion is that every attention is paid to all buoys and lights off the coast that possibly can be by the Trinity Board.

ADMIRALTY.

ALDBRO'.

Circular VI.

Circular VI.

5. ALDERNEY.

LLOYD'S EVIDENCE.

ALDERNEY.
AMBLE.

Circular VI.

- I. T. N. Barbenson, Island of Alderney, Lloyd's agent, and Trinity House agent.
- II. ISLAND of ALDERNEY, ENGLISH CHANNEL.
- III. The old beacons on the shore marking the positions of the Pierre au Vrac and Boni Rock to the south of the island, are in charge of the Commissioners of Woods and Forests ; also the beacons denoting the entrance to the Old Harbour, or Bray Harbour, the leading lights on the shore marking the fairway into the harbour ; the beacon on Bovée de Braye, and buoy at outer end of deposit for Admiralty Breakwater, in charge of engineers of Admiralty Works.
- IV. Sufficiently well lighted, but not sufficiently buoyed and beacons.
- V. No improvement required in existing lights, buoy, or beacons, but additional buoys and beacons are required.
- VI. First, buoy on Pierre au Vrac Rock, which lies more than two miles from the shore, and for which there is no good cross mark ; second, beacon on Corbet Rock, which is awash at high water, and which is the key to the "Passage du Singe ;" third, beacon on outer or N.W. Jumelle Rock, which is situated in the fairway of the "Passage du Singe ;" fourth, beacon on "Boni Rock," for which there is no cross mark ; and fifth, two beacons on the shore marking the positions of the Brinchetuis Reef, to clear the dangers at the east end of the island. This part of the coast is also very dangerous at night, which could only be obviated by having a light on the shore, which, with the light on the French coast, would designate the Race of Alderney. I have known several vessels lost on that part of the coast during the night.
- VII. Gas is used in the harbour leading lights.
- VIII. Never extinguished since established, except for a few minutes ; no accident has occurred in consequence.
- IX. Buoy at outer end of Admiralty works several times washed away by the sea ; no accidents ever occurred in consequence.
- X. Cannot say.
- XI. None used nor wanted.
- XII. None used.
- XIII. The old shore beacons are coloured *white* and conical ; the beacon on the half tide rock is *red* (description enclosed) ; the buoy at outer end of Admiralty works *black* (description enclosed) ; leading lights *red* (description enclosed).
- XIV. None.
- XV. None.
- XVI. Not aware of any.
- XVII. The general feeling is that more are wanted.
- XVIII. No dues collected.
- XIX. No dues collected.
- XX. Not aware of any.

AMBLE.

6. AMBLE.

Circular III.

LIGHTHOUSE.—(SPECIAL RETURN.)

The Commissioners of Warkworth Harbour have no lighthouse under their authority, and only themselves exhibit a tidal light (gas, at the end of one of their piers,) to show when the harbour can be entered.

Circular V.

BUOYS AND BEACONS.

- I. The Commissioners of Warkworth Harbour, Amble, Aeklington.
- II. The accompanying chart shows the position of the harbour over which the Commissioners have jurisdiction or management over any buoys or beacons, and have therefore no replies to give to any of the following questions.

Circular VI.

LLOYD'S EVIDENCE.

- I. Wm. Muirs, Lloyd's agent, Warkworth.
- II. WARKWORTH and PORT of WARKWORTH.
- III. Coquet Island Light, and buoys in the district, under the Trinity House, London.
- IV. Yes.
- V. None.

AMBLE and BARMOUTH.

AMB

- VI. None.
- VII. Oil for the Coquet Light, and gas for the tidal harbour light.
- VIII. Not heard of any.
- IX. Buoys do sometimes part from the moorings in a heavy sea, but are replaced without delay, but have not known any accidents in consequence.
- X. No well founded complaint ; but when captains make a mistake in fine weather they are glad to blame anything or anybody.
- XI. A tide flag is shown when there is water sufficient on the bar, and a light at night for the same purpose. I am not aware that it can be further improved.
- XII. No fog signals used, nor do I think that they could be used to any advantage.
- XIII. Black, red, black and white, conical black and white nun buoy on Boulmer Head.
- XIV. No.
- XV. None levied.
- XVI. Not aware of any.
- XVII. General satisfaction.
- XVIII. No complaints.
- XIX. I have no knowledge how applied.
- XX. Not aware.

Circular

- I. Thomas Hepplewhite, harbour master, Amble.
- II. WARKWORTH HARBOUR.
- III. The Coquet light and buoys adjacent thereto are under the control of the Trinity House, Deptford Strond.
- IV. I consider the coast adjacent to be well lighted, buoyed, and beacons.
- V. I cannot point out any improvement.
- VI. I cannot recommend any additional lights, buoys, or beacons.
- VII. Oil is used for the Coquet light, and gas is used for the harbour tide light.
- VIII. I am not aware.
- IX. Sometimes the buoys adjacent Coquet Island break adrift, but are replaced with all possible despatch. I do not know of any accident occurring in consequence.
- X. None that I am aware of.
- XI. A tide flag is shown in bad weather near the entrance of the harbour, and a tidal light at night on the south pier end.
- XII. No fog signals are used. I do not think any are required.
- XIII. Black, red, black and white, conical ; a black and white nun buoy on Boulmer Stile.
- XIV. I have nothing to recommend.
- XV. No local dues are levied at this port.
- XVI. None to my knowledge.
- XVII. The Coquet light is marked red, in the stream of Haringley Head to the southward and Boulmer Stile to the northward, and shows a bright light to the east and west of those points. It is the opinion of masters, &c., frequenting this locality, that the red light ought to be continued round to the westward.
- XVIII. None excessive.
- XIX. I cannot say.
- XX. I am not aware.

7. BARMOUTH.

BAR

Circular

Barmouth Harbour, June 24, 1859.

SIR, At the entrance of the harbour there is a bar, from south to north.

A buoy is moored at the outside and another at the inside of bar.

There are four buoys belonging to the harbour, viz., two continually out and the other two on shore, ready to replace those that are out in case of accident or broke loose from their mooring.

No charge is made for the buoys ; there are no charts or maps belong to this port to show or to give you a description of the place.

Sir, I beg to apologise for not answering your queries earlier, not knowing what answer to send ; and now I beg leave to send as above.

I remain, &c.

J. F. Campbell, Esq.
&c. &c.

H. GRIFFITH.

8. BARROW.

LIGHTHOUSE.—(SPECIAL RETURN.)

(No lights in Barrow Harbour.)

BUOYS AND BEACONS.

- I. Barrow Harbour Commissioners.
 II. Chart enclosed. Limits of harbour colored pink; no separate cost kept; no separate charge included in harbour dues.
 III. No.
 V. See sketch.
 a. Iron.
 b. 12l.
 c. 10s.
 d. 5s.
 e. Nineteen.
 f. One.
 g. Barrow.
 h. Five.
 i. Nil.
 k. By Mitchell screw, No. 4.
 l. Dry harbour.
 m. By tender.
 n. Red on right hand, black on left, coming in to harbour. 1 black and white for "Fairway."
 o. Nineteen.
 VI. Pear-shaped for rivers.
 VII. Not longer than six months.
 VIII. Surveyed from time to time by the harbour master.
 IX. No beacon.
 XIV. Harbour dues paid into the harbour office.
 XIX. By harbour master from time to time.
 XXI. Easily discovered by the harbour being dry.
 XXII. Harbour master.
 XXV. Have tried the wood buoys, but found the pear-shaped iron buoys to answer best.

9. BEAUMARIS.

BUOYS AND BEACONS.

- I. Mayor and Town Council of Beaumaris.
 II. These facts can be ascertained on reference to Lieutenant Robinson's charts of the Menai Straits.
 III. No.
 IV. None.
 V. Yes.
 a. Wood.
 b. 18l.
 c. Not ascertainable.
 d. 10s.
 e and f. Seven black nun buoys. One with perch; five red can buoys; one with perch; and one cheque red and white.
 g. Beaumaris.
 h. Four.
 i. Two.
 j. Being run foul of.
 k. Chain and stone.
 l. Above eight pounds.
 m. Not by tender.
 n. Lettered and numbered.
 o. Thirteen.
 VI. None tried any other than those now in use.
 VII. Every twelve months.
 VIII. All surveyed by the harbour masters.
 IX. Not classified.
 X. One.
 a. Causeway Beacon.
 b. Not known. Trinity Board can furnish this information.
 c. To guide vessels from the rocks in entering the harbour.
 d. Being denoted in the charts and colour.
 e. Stones.
 f. Bottom part black; top, white.
 g. No.
 h. About 50 feet.
 i. Not known.
 j. Not known.
 k. Not known.
 XI. None substituted.
 XII. None. Not aware of any banks shifting or increasing.
 XIV. The Town Council.
 XVI. Not ascertainable.

BEAUMARIS.

BEAUMARIS.

Circular V.

- XVII. None made.
 XVIII. None made.
 XIX. By the harbour master in the month of June in each year.
 XXI. Advertisement in the "Shipping Gazette."
 XXII. Yes, the harbour master.
 XXIII. Done by the Trinity pilots.
 XXIV. None.
 a. Chain and stone.
 b. Wood.
 c. See sketch.
 d. Seven feet by three feet six inches.
 e. Black and red.
 h. 2s., 1s., and 6d. per vessel.
 j. Lessee of the Corporation of Beaumaris collects about the harbour.
 k. In entering the harbour, black on larboard, red on starboard.
 m. Replaced as soon as the weather permits.
 XXV. None; but a plan was suggested by Mr. Herbert, of London, some years ago, but never adopted.
 XXVI. None.

LLOYD'S EVIDENCE.

Circular VI.

- I. Hugh Jones, Lloyd's agent, Beaumaris.
 II. BEAUMARIS.
 III. Trinity Board, London, for the Menai Light at the entrance of the harbour. The Mayor and Town Council of Beaumaris for beacon and buoys, also for the light on Beaumaris Pier.
 IV. I do.
 V. I cannot.
 VI. A buoy on the western skirts of the Dutchman bank. The buoy now placed on the said bank is on the north extremity; vessels coming in and going out of the harbour, when going through the east channel, sometimes get aground, their commanders not aware of the bank reaching so far west.
 VII. Oil at the Menai Lighthouse; gas at Beaumaris Pier.
 VIII. No.
 IX. A buoy at times by stress of weather or vessels coming in contact with them gets adrift, but is replaced as soon as possible. I am not aware of any accident having ever occurred in consequence.
 X. Not aware of any.
 XI. Tide signals are not used, and, in my opinion, not wanted, as there is plenty of water at the entrance and inside of the harbour at all times of tide.
 XII. Fog signals are not used. A bell or gong on Puffin Island to be rung or sounded by the telegraph keeper on such occasions would be of great service.
 XIII. Black nun on the larboard hand, red can buoy on the starboard hand coming into port, all lettered and numbered with white paint, arranged in the best possible manner for guiding vessels clear of the banks and follow the channel and moored with a strong chain attached to a stone and placed in about one and a half fathom at low water spring tides.
 XIV. No.
 XV. Halfpenny per ton on all vessels having cargo on board and discharging in the port, payable to the Trinity Corporation for the Menai Light; 2s. per vessel of 40 tons and upwards, and 1s. per vessel under 40 tons to 20 tons, and 6d. per vessel under 20 tons, payable to the Town Council of Beaumaris for percharge; no charge for buoys.
 XVI. An application was made this year by masters of vessels frequenting the port for an additional buoy to be placed on the skirt of the Dutchman bank, and is still under the consideration of the Town Council of Beaumaris.
 XVII. In my opinion the general feeling of the mariners is, that the port is efficiently supplied, except the additional buoy before stated.
 XVIII. Often heard from masters of coasting vessels that Beaumaris is the cheapest port they go to as regards dues.
 XIX. I believe they are.
 XX. No.

I. John Williams, superannuated Trinity pilot for Beaumaris. Circular VI.

II. BEAUMARIS.

III. Trinity for Menai Light, Mayor and Town Council of Beaumaris for Beaumaris buoys,

- BEAUMARIS.**
Circular VI.
 IV. Yes.
 V. None.
 VI. Cannot.
 VII. Oil at Penmon Lighthouse; gas on Beaumaris Pier.
 VIII. Not aware of any.
 IX. Not known.
 X. I am not aware of any.
 XI. No, and in my opinion not wanted.
 XII. Signal on the lighthouse, such as a bell, might be of service.
 XIII. Black buoys on the larboard, red buoys on the starboard, coming up the channel.
 XIV. No.
 XV. Halfpenny per ton for the Menai Light paid to the Trinity Board; 2s., 1s., and 6d. paid to the Town Council of Beaumaris for perch for each vessel.
 XVI. Not aware of any.
 XVII. I believe their feeling is that the harbour is efficiently lighted and buoyed.
 XVIII. Never heard of the dues being excessive.
 XIX. As far as I know they are.
 XX. No.
- Circular VI.**
 I. Richard Lewis, Beaumaris, master mariner.
 II. BEAUMARIS.
 III. Trinity Board for lights; mayor and town council of Beaumaris for buoys and beacons.
 IV. Yes.
 V. Cannot.
 VI. Cannot.
 VII. Oil and gas.
 VIII. Not aware.
 IX. No.
 X. Not aware of any.
 XI. Not used, and, I think, not wanted.
 XII. None used. I think a bell on the outside of the lighthouse would be of service.
 XIII. Black on the larboard, and red on the starboard hand coming into the harbour.
 XIV. None.
 XV. Halfpenny per ton to the Trinity Board for the lights at Penmon. Beaconage payable to the town council of Beaumaris, according to the tonnage of the vessels, 2s., 1s., and 6d. per vessel.
 XVI. Not aware of any.
 XVII. Efficiently lighted and buoyed.
 XVIII. Never heard complaints as to the dues being excessive.
 XIX. To the best of my knowledge they are.
 XX. No.
- BERWICK.**
Circular III.
 10. BERWICK.
 LIGHTHOUSE.—(SPECIAL RETURN.)
 I. Berwick harbour.
 II. The Harbour Commissioners.
 III. The Harbour Commissioners or the Harbour-master.
 IV. One light and a tide light below, which is lighted when there are feet of water on the bar.
 V. 19th September, 1825.
 VI. By Lieutenant Jones, R.N., Commander of His Majesty's Revenue Cutter, "Mermaid."
 VII. It being considered the best.
 VIII. 10th October, 1826.
 IX. Mr. Nelson, engineer; Mr. Redpath, builder; and Mr. Wilkins, London, fit the apparatus.
 X. Harbour light.
 XI. Stone, solid, painted drab, with a red top.
 XII. No conductor.
 XIII. Forty-eight feet.
 XIV. Forty-five feet.
 XV. Seven nautic miles.
 XVI. Twelve and a half nautic miles.
 XVII. About 110° from about east north east round by the east to about south (bearings from the lighthouse).
 XVIII. Fixed, white. Tide light, fixed, red.
 XIX. None.
 XX. From the going away of daylight at night till the return of daylight in the morning. Tide light while there is not less than ten feet on bar.
 XXI. Dioptric-zimuthal condensing apparatus. Tide light, parabolic reflector, with red disc in front.
- BERWICK.**
 XXII. Sixth order apparatus, having one burner, and the tide light has also one burner.
 XXIII. Altered on recommendation of Messrs. D. and T. Stevenson, C.E., from two Argand burners in parabolic reflectors to one Argand burner in dioptric condensing apparatus, to make the light more equable without decreasing its efficiency. New apparatus exhibited 14th July, 1859. No alteration on character or bearings.
 XXIV. Messrs. Sautter and Co., Paris, and Messrs Milne, Edinburgh.
 XXV. By apertures in wall at level of floor, fitted with covers.
 XXVI. There are none.
 XXVII. None.
 XXVIII. None.
 XXIX. Cost of lighthouse, 300*l*. There are no buildings adjoining.
 XXX. Lighthouse was built in 1826.
 XXXI. Lantern of stone, with east-iron sash frame. Light-room 8½ feet diameter, fitted on seaward side, with four panes of glass three feet two inches high and 15 inches broad.
 XXXIII. No account kept.
 XXXIV. No account kept.
 XXXV. One keeper, salary 62*l*. per annum.
 XXXVI. Total cost of condensing apparatus for glass rings and prisms, and fitting up with lamp, complete, about 70*l*.
 XXXVII. No account kept.
 XXXVIII. One hundred gallons of oil; one and a half gross of wicks.
 XXXIX. Sperm, price in 1857, 9s. 4*d*. per gallon; ditto, 1858, 8s. 5*d*. per gallon.
 XL. Circular unbleached cotton, 9s. per annum.
 XLI. None.
 XLII. Out of the general revenue of the harbour, received at the harbour office.
 XLIII. There is no charge for lights.
 XLIV. In 1852, 97*l*. 7s. 7*d*., in 1853, 96*l*. 8s. 6*d*.
 XLV. None.
 XLVI. None.
 XLVII. None.
 XLVIII. None.
 XLIX. None.
 L. By the harbour master.
 LI. 12th April, 12th July, 12th October, 12th April.
 LII. The light has never been extinguished.
 LIII. One. Oil kept on the ground floor.
 LIV. None.
 LV. A red light shown below the harbour light when there is a depth of not less than 10 feet on the bar. No signal by day.
 LVI. None.
 LVII. There is only one keeper, who remains in the light-house from dusk to daylight.
 LVIII. They must light the harbour light at the going away of daylight and keep it lighted until the return of day-light. The tide light must be lighted as soon as there is 10 feet of water on the bar and remain so until there is less than 10 feet. The light keeper must report anything particular that comes under his notice.
 (N.B. Since the light was altered, we have used colza oil, the cost of which is 3s. 6*d*. per gallon.)
 On the 29th of July this light on the pierhead was observed from the "Vivid," and used in entering the river. Mr. Stevenson had previously called the attention of the Commissioners to the light. It was first seen, at the point indicated by the chart, first very feebly and then brilliantly. Shortly afterwards, on running a little to the southward, the light appeared to wane considerably, so much so that for a moment it was thought to be a revolving light. The Commissioners landed at about 10 p.m. and having gone for the keeper to the inner end of the pier, returned with him and inspected the light. The apparatus is Dioptric Holophotal, with extra vertical prisms at the sides intended to condense all the available light on the particular passage which it is intended to illuminate, and to mask the light from all other points. The light is produced by a single, Argand burner, oil lamp with one wick, about equal in size to a common French table lamp. The apparatus is evidently very efficient. As compared with shore lights, from the

BERWICK AND BLAKENEY.

steamer the light was exceedingly powerful. It appeared to be the best harbour light then observed, but the window in which it is placed has such thick bars that they neutralize a great deal of the advantage gained by the optical apparatus. Their effect was remarked from the steamer, as above stated, though the cause of the waning of the light was not then suspected. A sharp dark shadow was found to be cast by each of the bars on the ledge outside the window. This would extend to a considerable breadth at a distance. The bar, in fact, *masks* the light from a particular part of the channel. It appeared that an arch should be formed to replace these bars or (that some change should be made to remove this defect in a light which, in other respects, is so good.

There is a red light in the lower part of the tower shown only at particular states of tide. It is an Argand burner in a parabolic reflector, with a red glass cover similar to the harbour lights at Aberdeen. The reflector was in good order; the tower in confusion, being still in the hands of workmen. The keeper's dwelling appeared to be very comfortable, but, in consequence of the length of the pier, it is a considerable distance from the lighthouse. The keeper states that the Fern Island light, distant 16 miles, is hardly ever seen. This light stood 76 on the list of lights visited or seen alight. Later in the evening the red light was observed from the "Vivid," and appeared very luminous.

BUOYS AND BEACONS.

- I. Berwick Harbour Commissioners.
- II. There are no buoys or beacons.

11. BLAKENEY.

LIGHTHOUSE.—(SPECIAL RETURN.)

(No lighthouse at this port.)

BUOYS AND BEACONS.

- I. Thomas Waterson Bacon, clerk to the Blakeney Harbour Company, Clay, Norfolk.
- II. No chart. The best description of the harbour is found in the Admiralty Survey of this place, No. 68. Cost and charges as per accompanying statement.
- III. They are under the sole management of the Directors of the Blakeney Harbour Company and their servants.
- IV. None.
- V. There is no general classification beyond the placing the larger buoy at sea; and as the harbour is entered the buoys decrease in size, with black buoys on the starboard and white on the larboard side.
 - a. Oak and iron.
 - b. Varies as to size, &c.
 - c. Included in the disbursements, general, expended on buoys and beacons, as annexed in account.
 - d. The same.
 - e. Fairway, one red; nine black; and eight white.
 - f, g. Varies; as the number required for the navigation varies, but always a sufficient has been kept at Blakeney Town, where there are now one red fairway buoy, and four each black and white.
 - h. The spare fairway buoy has complete moorings, and five are kept for the others ready at any time.
 - i. About 21 to 22 buoys were shifted and removed, as accident or the alteration of the harbour required.
 - j. Given before.
 - k. Chains and large heavy stone blocks.
 - l. We have no five fathom water.
 - m. Sometimes purchased, but always procured by order direct from one or more of the directors of the harbour.

BLAKENEY.

BLAKENEY.
Circular V.

- n. Any ship going out of this, a dry harbour, in the night or thick weather is accompanied with a boat supplied with the necessary lanterns and assistance to find the buoys.
 - o. All.
- VI. In Blakeney harbourway the buoys are of this pattern (see sketch), and at the turns of the harbour have a staff attached.
- VII. Are constantly attended to; this being the duty of the pilots of the port, who are always paid for any mooring.
- VIII. No other.
- IX. The beacons are general, all within the harbour or that part where ships usually drop anchor; they are long poles from 20 to 30 feet long, and where necessary a solid log buoy is placed.
- X. They vary from 63 to 80.
 - a. They have no Christian names.
 - b. Changing every day.
 - c. To navigate the creeks.
 - d. The eyes.
 - e. Fir poles.
 - f. Natural.
 - g. If wanted, lanterns are on hand and provided free for the ship's use.
 - h. Varies according to situation and requirement.
 - i. Not much; varies.
 - j. Included in disbursements stated.
 - k. No special income from beacons or buoys; ships pay harbour dues 1½d. per register ton.
- XI. What are used are fully sufficient for any want.
- XII. The system adopted is to be ever ready to replace a buoy or beacon.
- XIII. The system adopted is to be ever ready to replace a buoy or beacon.
- XIV. Stated above.
- XV. Stated above.
- XVI. Income from harbour dues:—

For Midsummer quarter, 1852	-	£21	14	10
" " " " 1858	-	21	12	10
Income " for year " 1852	-	89	18	10
" " " " 1858	-	88	4	10
Expenditure for year " 1852	-	45	16	5
" " " " 1858	-	39	6	4

This expenditure is made as complete as the general disbursements of the company allows.
- XVII. None.
- XVIII. None.
- XIX. The harbour master, in whose particular care they are, one and all, placed.
- XX. See buoys.
- XXI. The pilots always know the state of every buoy.
- XXII. There are always at the lower part of the harbour pilots in attendance, and a house has been built for their sole convenience.
- XXIII. The pilots have direct authority to replace every buoy that has drifted.
- XXIV. None.
 - a. Described already.
- XXV. None.
- XXVI. Personal directions.
- XXVII. The Blakeney Harbour Company is a corporate body, authorized by the 57 Geo. III. cap. lxx., by which Act alone the directors are empowered to manage.

Amount received for harbour dues for the Midsummer quarter, 1852	-		-	£21 14 10
Amount received for harbour dues for the Midsummer quarter, 1858	-		-	21 12 10½
Total amount received for harbour dues in the year 1852	-		-	89 18 10
Total amount received for harbour dues in the year 1858	-		-	88 4 10
Total expenditure for the year 1852	-		-	45 16 5

BLYTH.

Circular III.

12. BLYTH.

LIGHTHOUSE.—(SPECIAL RETURN.)

- I. South-west side of the harbour.
 II. The Blyth Harbour and Dock Company, Blyth, Northumberland.
 III. John Laws, Secretary to the Blyth Harbour and Dock Company.
 IV. Two lights; they bear N. by W. $\frac{3}{4}$ W., and S. by E. $\frac{3}{4}$ E., 148 yards from each other.
 V. Not known.
 VI. Supposed by the late Sir W. W. Ridley, Bart., or his antecedent.
 VII. As a guide to the entrance of the harbour.
 VIII. 1788.
 IX. Not known.
 X. Harbour lights.
 XI. One called the High Light, built of solid ashlar work, whitewashed, castellated top. The other of wood on framework.
 XII. No lightning conductor.
 XIII. Height of house, 40 feet, upon which is a flagstaff 20 feet, and at the top of the latter a vane.
 XIV. Forty-eight feet.
 XV. Eleven miles.
 XVI. 12.8 miles.
 XVII. E. N. E. to S.
 XVIII. Fixed white light.
 XX. For the present when there is nine feet of water in the channel.
 XXII. High light, three gas burners with reflectors; low light, two oil lamps with reflectors.
 XXIII. High light, changed from oil to gas in 1857.
 XXVI. None.
 XXIX. Not known.
 XXXIX. Colza oil, 5s. per gallon.
 XL. Cotton wick.
 XLI. None.
 XLII. Blyth Harbour and Dock Company.
 XLIII. Included in other harbour charges.
 XLV. None.
 L. Private lights.
 LI. No.
 LII. Oil stored on the ground floor; three spare lamps.
 LV. Flag by day and the said light by night, when nine feet or more water in the Channel.
 LVI. Not considered necessary.
 It is supposed that several of the above questions relate to lighthouses of a superior class to those above described.

Circular V.

BUOYS AND BEACONS.

- I. George Harrison, Harbour Master, Blyth, Northumberland.
 II. No buoys.
 X. There are at present in use two beacons, called the Link beacons, a guide for vessels to clear Seaton sea rocks, made of wood with black diamond tops.
 Note.—The outer beacon has been removed, the new breakwater having been extended to the point where it was placed.

Circular VI.

LLOYD'S EVIDENCE.

- I. Richard Hodgson, Crofton Mills, Blyth, miller and shipowner, agent to Lloyd's.
 II. BLYTH and DISTRICT.
 III. Harbour Commissioners, light, tide lights; no beacons or buoys.
 IV. No. There is a new lighthouse being erected by the Harbour Commissioners on the new pier end, but not yet lighted.
 V. An iron beacon is wanted very much on the "Sow and Pig" rocks, which lay a considerable distance from the shore, and vessels very often get on shore.
 VI. (Sec No. 5.) Newbiggin Point, which lays well out, a proper place for an additional lighthouse.
 VII. High light gas, the low light oil.
 VIII. No accident.
 XI. Tide lights lighted 9 feet water, and going out at 9 feet each tide at night, and flag by day.
 XVII. No complaints.
 I. Edmunds and Watts, jun., Blyth, shipowner.
 II. BLYTH.
 III. Blyth Harbour and Dock Company.
 IV. No.
 V. A beacon with a ball is required on Sow and Pig rocks.

BLYTH and BOSTON.

- VI. A beacon with a ball on Sow and Pig rocks. They lay out into the sea, and ships coming from the north are apt to catch them.
 VII. Oil and gas.
 XI. A light by night, and a flag by day, are placed on the top of the lighthouse when there is 8 feet of water on the bar.
 XII. Not used and not necessary.
 XIII. Block-beacons with diamond head, arranged along the half-tide breakwater, west side.
 XV. The local lights being the property of the Blyth Harbour and Dock Company, they charge 2½d. per ton register, which includes the use of the harbour as well as lights.
 XVII. Harbour leading lights not good, otherwise satisfactory.
 XVIII. No complaint.
 XIX. Cannot say.

13. BOSTON.

LIGHTHOUSE.—(SPECIAL RETURN.)

BUOYS AND BEACONS.

- V. I. The mayor, aldermen, and burgesses of the borough of Boston, in the county of Lincoln, named as Commissioners for carrying into execution certain Acts of Parliament made and passed for improving the port and harbour of Boston, &c., by George York, their clerk.
II. Chart herewith sent. The costs of maintaining the buoys and beacons in 1852 were 407*l.* 7*s.* 1*d.*, and in 1858 were 480*l.* 2*s.* 1*d.*; and the income derived therefrom in 1852 about 1,882*l.* 16*s.* 7*d.*, and the income in 1858 was 1,300*l.* 12*s.* 1*d.* And in the Midsummer quarters, viz.: in 1852, about 436*l.* 1*s.* 9*d.*, and in 1858, about 383*l.* 12*s.* 6*d.* The number of buoys in use and in store about 70, and the beacons (including those used in the river) about 30.
III. Not responsible.
IV. No other authorities are responsible to this.
V. We have two forms only.
a. Wood.
b. From 6*l.* to 3*l.*
c. 5*s.* to 6*s.*
d. 3*s.* to 5*s.*
e. Average about 50.
f. This varies, but always sufficient for any emergency.
g. A storehouse on the wharf.
h. Have generally about 12 in the storehouse.
i. Five.
j. Various; sometimes the chain breaks, sometimes vessels run over them.
k. By proved chain cable manufactured.
m. Tenders, one for the buoy, another for the chain.
n. We have no other means than having black buoys on one side and red on the other.
o. We generally average from 45 to 48.
VI. We consider ours well adapted for their situations.
VII. Our moorings are examined and made secure every year, and the buoys are all removed and fresh tarred and painted.
VIII. A survey by the harbour surveyor once a year.
IX. Two pole beacons, 30 feet above the sands at low water.
a. Gat beacon and Toft beacon.
b. One in 1857, the other last year.
c. For security of life, and to show the top of the high sands at high water.
d. There are no other, and they are changed in the formation.
e. Strong poles, wood tops, and baskets.
f. One red and the other white.
g. Not lighted.
h. Six feet.
i. 60*s.* each.
j. Should say 12*s.* annually.
k. No income.

- XI. Cannot answer.
XII. Cannot answer the question, not being cognizant of anything beyond our own channel.
XIV. Tonnage and lackage dues payable to the Harbour Commissioners.
XV. Same fund.
XVI. Our buoys are maintained by Boston paying two thirds and Spalding contributing one third of the expense.
XVII. Not aware that any applications have been made.
XVIII. None has been made.
XIX. Annual inspection made in August by harbour master, surveyor, and pilots, &c., but the pilots are continually inspecting same.
XX. Beacons surveyed at the same time.
XXI. Captains of vessels, pilots, and fishermen using the channel give immediate notice, so that a buoy adrift is soon replaced.
XXII. Yes.
XXIII. The pilots stationed below are bound to immediately inform the surveyor to the Trust.
XXIV. No complaints.
XXV. Shape a little altered from time to time.
XXVI. Have none.
XXVII. The channel is considered to be as well buoyed and beacons out as any in the United Kingdom.

BOSTON AND BRIDGEWATER.

LLOYD'S EVIDENCE.

- I. James Buckley, Pilot Office, Boston.
II. BOSTON.
III. Boston Harbour Trust.
IV. Sufficiently buoyed and beacons.
VI. Two leading lights might be advantageously placed on the Long Sand to enable ships to enter Boston Deep in the night, and a hooded light on Like's House to let shipmasters know when they are the length of the slidway.
VII. Sperm candles.
VIII. Not any.
IX. In gales of wind, and from vessels fouling the buoys, they are sometimes broke adrift, but they are replaced as soon as possible, and no accident has occurred to my knowledge.
X. None.
XI. Not any.
XII. Not any.
XIII. Red and black; the black on the starboard side coming in, and the red on the larboard side.
XIV. No.
XV. None whatever.
XVI. Not any to my knowledge.
XVII. That no port in England is better buoyed and beacons, or better lighted as far as the harbour lights are concerned.
XIX. Yes, particularly so.
XX. No.

- I Richard Booth, Wainfleet, near Boston, farmer, agent for Lloyd's.
II. BOSTON.
III. The Corporation of Boston.
IV. I have reason to think so. This is an arm of the sea running up to Boston, and the channel is marked by buoys, one side of which has red buoys and the other black.
V. There are no lights or beacons on this coast.
VI. Two additional small buoys are required at the entrance of Wainfleet Haven.
IX. A buoy has occasionally been displaced from the effects of a storm, but has not been long without a fresh one.
XI. There is a tide buoy in Clay Hole distinguished by a bell, this has been removed.
XIII. Red and black of the usual form.
XV. Wainfleet harbour being subject to the port of Boston lackage 1*d.* a quarter for corn is charged, and 3*d.* per tonnage on vessels.
XVIII. Never heard any complaint.
XIX. I have no reason to think otherwise.
I may observe that the above applies to the southern part of my district. There are no lights, buoys, or beacons to the northward, which extends to Donna Nook, and is under the control of the Trinity House, Hull.

Circular VI.

14. BRIDGEWATER.

BRIDGEWATER.

LLOYD'S EVIDENCE.

- I. Thomas Sully, agent to Lloyd's, Bridgewater.
II. BRIDGEWATER.
III. Lights under control of Trinity House; buoys and beacons under the control of the Port and Navigation Committee of the town council.
IV. Yes.
VII. Oil.
IX. When displaced, are immediately put in order by harbour-master.
XIII. One white, others black, and one chequered, taper form.
XV. One penny per ton harbour dues; one shilling per vessel for mooring; three shillings per vessel for Bumpkin light.
XVII. That they are sufficient.
XVIII. The only complaint is that 3*s.* for the Burnham light is excessive.
XIX. Yes.
XX. No.

Circular VI.

BRIDPORT.
BRIXHAM.

15. BRIDPORT.

BUOYS AND BEACONS.

(None of these questions are applicable to Bridport Harbour.)

LLOYD'S EVIDENCE.

- I. Daniel Good, ropemaker and timber merchant.
 II. THE HARBOUR, Bridport, County Dorset.
 III. Board of Commissioners.
 IV. I do.
 V. Cannot suggest any.
 VI. Do not see the advantage of any.
 VII. Tallow.
 VIII. Not aware of any.
 IX. Do not know of any.
 X. Not aware of any.
 XI. The signals are lanterns, one on each extreme point of the pier.
 XII. None used, and do not consider they are required.
 XIII. One buoy, coloured black, form of a large piece of timber rounded the sides and ends, and always moored.
 XIV. Do not see the service of any change.
 XV. None levied.
 XVI. Not aware of any.
 XVII. The general feeling in my opinion is satisfactory.
 XVIII. Dover and Ramsgate dues are mostly complained of at present.
 XIX. Yes, so far as I am informed.
 XX. Not aware of any.

Circular VI.

- I. John Swain, Harbour Master.
 II. BRIDPORT, County Dorset.
 III. Commissioners.
 IV. Quite so.
 V. None.
 VI. None wanted.
 VII. Tallow candles.
 VIII. Not to my knowledge.
 IX. Not any.
 X. Have not heard of any.
 XI. Tide signals are used, two lanterns to guide between the piers.
 XII. None used nor wanted.
 XIII. One black buoy for warping out as in the harbour constantly moored.
 XIV. None.
 XV. None.
 XVI. Heard of none.
 XVII. Heard of no complaint.
 XVIII. Have heard of no complaint of late years of light dues. Dover and Ramsgate dues frequently.
 XIX. Cannot answer that question.
 XX. I am not.

16. BRIXHAM.

LIGHTHOUSE.—(SPECIAL RETURNS.)

- I. Brixham.
 II. The Commissioners for improving the Harbour and Market of Brixham.
 III. None.
 IV. There is no lighthouse of any description. There being merely a common gaslight at the pierhead, with red glass seaward.

BUOYS AND BEACONS.

- I. The Commissioners for improving the Harbour and Market, Brixham, by R. W. Wolston, their clerk.
 II. There is none.
 III. None.
 IV. None.
 V. Two buoys to denote the limits of the harbour, both cylindrical or drum-shaped.
 a. Timber, iron bound.
 b. Under 10f.
 c. No specific account kept, being so trifling.
 d. Ditto.
 e. Two.
 f. None.
 g. None.
 h. None.
 k. By anchor and chain.

Circular V.

BRIXHAM and CARMARTHEN.

- l. Under 10f.
 m. By tender.
 n. None.
 o. None.

BRIXHAM
Circular

- VI. No experience, the buoys being scarcely within the influence of the tide.
 VII. Not any.
 VIII. None.
 IX, X. There are no beacons.
 XI. No substitution has taken place.
 XII. No dangers exist.
 XIII. Wide answer to Query IX.
 XIV. The general harbour funds
 XV., XVI. There are no beacons.
 XVII., XVIII. There has been no application made.
 XIX. No special inspection; they are usually overhauled once a year by the harbour master, and paid with coal tar.
 XX. There are no beacons.
 XXI. No public notice is given, as the two buoys are stationary, merely to mark extent of harbour.
 XXII. The contingency has not happened.
 XXIV. None have been made.
 XXV. None.
 XXVI. None.
 XXVII. This harbour lies within Torbay, on the southern side, the access to which in all winds, and at all times of tide, coupled with its freedom from all rocks, shoals, sand banks, and all other impediments so usual to harbours in general, point it out as a fit locality for a harbour of refuge, to which it is hoped the attention of Government will be directed, protected as it is by the batteries on Berry Head, and having all the necessary materials on the spot for constructing more.

17. CARMARTHEN.

LLOYD'S EVIDENCE.

- I. Robert Dunkin, agent for Lloyd's for the Llanelly district and a Harbour Commissioner.
 II. RIVER TOWEY to the CARMARTHEN BAR, and LLANELLY HARBOUR.
 III. Thomas Richards, Quay, Carmarthen, Local Inspector of Buoys, under the Trinity House.
 IV. Not sufficiently buoyed.
 V. A bell buoy should be substituted for No. 1, at Carmarthen Bar.
 VI. A buoy should be placed between No. 1 and No. 2, for in thick weather it is difficult to distinguish the one from the other, the distance being so great. I would also recommend that, instead of being numbered, which is difficult to make out in thick weather, each buoy should be distinguished by being painted a different colour.
 VII. Oil is used in the two lighthouses, within the harbour of Llanelly.
 VIII. I am not.
 IX. The harbour buoys are occasionally shifted as the channels alter.
 X. See observations at the end.
 XI. The harbour light is exhibited during night tides from half flood to half ebb. The Whitford light is exhibited from half flood and half ebb, from sunset to sunrise.
 XII. None used.
 XIII. Black, with the exception of No. 3, which is chequered, and is placed about the middle of the channel.
 XIV. Each buoy should have a different colour.
 XV. One penny per ton register is charged on all vessels passing over this bar of Burry.
 XVI. I do not know of any.
 XVII. I believe mariners frequenting the port are satisfied as to the efficiency of the present lights, beacons, and buoys, except the suggested alterations.
 XVIII. All I believe are satisfied.
 XIX. I believe they are so applied.
 XX. I am not.

OBSERVATIONS.

Within the last few years, in my capacity as agent for Lloyd's, I have had occasion to attend several wrecks in the vicinity of Carmarthen Bar, viz. :—
 The Hanoverian galliot "Gute Hoffnung," with a cargo of statutory, valued 40,000l., one person drowned.

CARMARTHEN and CARNARVON.

- The "Huskisson," of Liverpool, with palm oil, valued at 15,000.
 - The American ship "Pickering Dodge," in ballast, six persons drowned.
 - The American ship "Queen of the West," cargo valued at 40,000.
 - The barque "Sir Henry Pottinger," now on the sands, cargo valued at 60,000, one person drowned.
- It is my decided opinion that if there were a bell buoy instead of the present No. 1 on Carmarthen Bar, in all probability some if not all these vessels would have escaped shipwreck.

- I. W. S. Brown, late of Ferry Side.
- II. RIVER TOWEY, CARMARTHEN.
- III. Mr. Thomas Richards, Quay, Carmarthen Local Buoy Inspector.
- IV. Not sufficiently buoyed.
- V. No. 1, on Carmarthen Bar buoy, far too small to be quickly seen in rough weather; a bell would be of great value in thick weather.
- VI. A buoy between No. 1 and 2, if practicable, as in rough or hazy weather, it is very difficult to make out No. 2 from No. 1; if a buoy cannot be laid down, a beacon on No. 2 would be desirable. No. 3 chequered to be black. It was chequered very many years since for craft to anchor at low water, but the pool has been filled many years. A red buoy should be placed in the best anchorage at low water, with the depth painted on it.
- XIII. Black, with the exception of No. 3, which is chequered, conical. About the centre of the channel.
- XIV. No. 3, chequered to be black. It was chequered many years ago for vessels to anchor at low water; the pool has been filled years since. A red buoy may be placed in the best anchorage at low water with the depth painted on it.

18. CARNARVON.

The limits of the port of Carnarvon extend—
 "From the mouth of the river Maltraith, in Anglesey, along the east side of the said river northward to the middle of Carnarvon bay, southerly seaward, and from thence to the river called Afon-hen, in Carnarvonshire eastward, from thence to the south side of the Swelley rocks, in the river Menay northward, and all the said river southwardly."

- XXII. The pilots stationed at Llanddwyn have strict instructions to give immediate intimation of a buoy having broken adrift.
- XXIII. No superior authority.
- XXIV. None.
- XXV. None.
- XXVI. None.
- XXVII. None.

Circular VI.

LLOYD'S EVIDENCE.

- I. Smith W. Davids, Church street, Carnarvon, Lloyd's Agent.
- II. The PORT of CARNARVON.
- III. The trustees of Carnarvon harbour.
- IV. I do.
- V. I cannot see that any alteration is necessary, or would be beneficial.
- VII. Oil.
- VIII. I am not aware of any casualty of this kind having occurred.
- IX. Some of the buoys have been occasionally displaced by storms but they have always been replaced as soon as practicable, and no accident has occurred.
- X. I know of none.
- XI. No tide signals are used or needed.
- XII. None are used, nor do I think any are required.
- XIII. Black, red, chequered, and green can buoys in the Channels, and nun buoys on sunken rocks and jets of baulks. In coming into harbour black buoys are left on the port hand, red buoys on the starboard hand, green buoys are placed to leeward of sunken rocks.
- XIV. I do not think any alteration would be of service.
- XV. No charge for lights. Vessels passing through the straits are charged for use of buoys, 1s. per ton, per register loaded—and one halfpenny per ton per register when in ballast or empty.
- XVI. I know of none.
- XVII. I believe all parties are well satisfied with existing arrangements.
- XVIII. I have heard no complaint.
- XIX. I know that they are.
- XX. I do not know of any.

19 and 20. CARDIFF.

Sir,

Cardiff, June 6, 1859.

THE Corporation of Cardiff have no control over the lights, buoys, and beacons in the Bristol Channel and the Roads here, with the following exception, viz., that they keep in repair two or three buoys at the mouth of the Taff. The rest are under the supervision of the Corporation of Bristol; this remark also applies to the lighthouse on the Flat Holmes. The trustees of the Marquis of Bute, the owners of the Bute Docks, have laid down numerous buoys to mark the channel or cut which leads up to their docks.

Under these circumstances I was under the impression

CARDIFF.

that I could not give the Commissioners any information which would be of service to them; but, if the contrary should be the case, I shall be most happy to fill up the form to the best of my ability.

Awaiting your reply,

I am, &c.

J. F. Campbell, Esq.
&c. &c.BEN. MATTHEWS,
Town Clerk of Cardiff.

BUTE LIGHTHOUSE.—(SPECIAL RETURN.)

- I. The Trustees of the Marquis of Bute, Bute Docks, Cardiff.
- (No lighthouse at or connected with the Bute Docks, Cardiff.)

BUOYS AND BEACONS.

- I. The Trustees of the Marquis of Bute, Bute Docks, Cardiff.
- II. The accompanying plan shows the situation of all the buoys under the management of this authority. The cost of maintaining the buoys cannot be given. No income derived from the buoys.
- III. Not responsible to any superior authority.
- IV. None.
- V. Neither classified or designated, but used only to show the line of the channel or cut from the River Taff in the Bristol Channel to the docks and tidal harbour.
- VI. Made of wood.
- VI. Not known.
- VII. No period fixed, done when required.
- VIII. No uniform system exists.
- IX., X. No beacons under this authority.
- XI. Solid timber buoys are now being substituted for band buoys as the latter are worn out.
- XII. The principle is merely buoying out the channel or cut to the docks.
- XIII. No beacons.
- XIV. From the general receipts of the docks.
- XV. No beacons.
- XVI. No income from buoys. The expenditure cannot be given.
- XVII., XVIII. No applications made.
- XIX. Inspected by the dockmaster as may be necessary.
- XX. No beacons.
- XXI. None. When a buoy gets adrift it is seen, and replaced the following tide.
- XXII. Yes; the dockmaster.
- XXIII. Not under any superior authority.
- XXIV. No complaints or representations have been made or received.
- XXV. It is found that square solid timber buoys are better for the purpose required than band buoys.
- XXVI. None issued.
- XXVII. None.

LLOYD'S EVIDENCE.

- I. John Owen, Cardiff, Lloyd's agent.
- II. CARDIFF.
- III. Trinity Board, and some buoys in the river by the corporation of Cardiff.
- IV. Yes, with the exception of Breaksea Point.
- V. None.
- VI. I would suggest the great desirability of a lighthouse being placed on Breaksea Point, or a ball buoy moored in four fathoms water off the Point.
- VIII. No.
- IX. The buoys have not unfrequently been displaced, but they are well attended to by the agent of the Trinity Board here.
- X. Since May 1843 at least 25 vessels have been stranded on Breaksea Point, and not more than six have been got off; had a light or a bell buoy been there all probably would have been safe.
- XI. There are gas tide lights at the pier heads of the Doche, and they appear to be sufficiently good for the purpose.
- XII. I am not aware of any fog signals being used in this locality except on board floating lightships.
- XIII. The positions and colour of the buoys are correctly laid down in the charts of the British Channel.
- XIV. None.
- XV. By the corporation of Cardiff a charge of 2s. 6d. for each vessel under 60 tons register, and 5s. for each vessel above, is levied for buoys and harbour dues.
- XVI. None.

CARDIFF and CARLISLE.

- VII. They seem quite satisfied except as regards Breaksea Point.
 XVIII. I hear no complaints.
 XIX. Partly so, and remainder in affording police and other protection to the shipping.
 XX. All seem perfectly satisfied.

21. CARLISLE.

SOLWAY FRITH LIGHTHOUSE.—(SPECIAL RETURN.)

- I. English Channel, Solway Frith.
 II. Trinity House, London.
 III. Port Carlisle, Dock and Railway Company.
 IV. Five lights, viz., lightship, Lee Scar lighthouse; Cote lighthouse, Lading Channel lights to Silloth Bay, tide lights at Annan, and tide light at Port Carlisle.
 V. 1837.
 VI. Carlisle Canal Company.
 VII. As recommended by Lieut.-Col. G. Robinson, R.N., to Admiralty.
 VIII. May 1841.
 IX. John Boyd, Companies' Engineer.
 X. Channel lights.
 XI. Timber, painted white.
 XIII. Lee Scar 64 feet, Cote 42.
 XIV. Lee Scar 25 feet, Cote 52.
 XVI. Lee Scar 12 miles, Cote 10 miles; lightship 8 miles.
 XVII. Lee Scar from E. by N. $\frac{1}{2}$, round northerly to S.W. $\frac{1}{2}$ S., Cote from N.E. to S.W.
 XVIII. Fixed in white or red, as per chart.
 XX. Sunset to sunrise.
 XXI. Catoptric.
 XXII. Four in lightships three in Lee Scar, four in Cote, two in Annan, and one in Port Carlisle.
 XXIII. December 1857. Extra burner in Cote light ship.
 XXIV. Messenger and Sons, Birmingham.
 XXV. Air pipes.
 XXVI. Tolls a bell.
 XXX. Finished.
 XXXII. Built by company.
 XXXV. Four men in lightship, 226*l.* per year; 1 man in Lee Scar, 47*l.* per year; 1 man in Cote, 31*l.* per year; 1 man in Annan, 31*l.* per year.
 XXXVII. 10*l.* per year.
 XXXIX. Colza oil, 4*s.* 6*d.* per gallon.
 XL. Cotton wicks, 2*s.* 6*d.* per gross.
 XLII. 1½*d.* per ton on vessels in and out; harbour office.
 XLV. None.
 XLVII. None.
 L. W. Geddes, Superintendent for Company.
 LI. No.
 LIII. Spare set at St. Kinburness.
 LVI. Private flags by day.
 LVII. Lightship men once a month.
 LVIII. One man constantly in attendance at the various lights.

BUOYS AND BEACONS.

- I. Port Carlisle Dock and Railway Company, late Carlisle Canal Company.
 II. Chart obtained, J. D. Potter, 31, Poultry, and 11, King Street, Tower Hill, London.
 III. Trinity House, London.
 IV. None.
 V. Red can buoys on starboard and black nun buoys on the Portland up to Silloth, thence to Port Carlisle; black can buoys in deep.
 a. Wood or iron.
 b. From 6*l.* to 24*l.*
 c. See average.
 d. See average.
 e. Fourteen buoys.
 f. Three buoys.
 g. Buoy and light establishment, Skinburness.
 h. Three buoys and moorings complete.
 i. Eight accidentally, and six shifted in accordance with change in channel.
 j. Broke adrift or sunk by vessels.
 k. Chain and stone.

CARLISLE.

- l. 5*l.* 10*s.*
 m. By tender; new, and repaired by Daylock.
 n. Paint, number or perch.
 o. The whole.
 VI. Iron new buoys.
 VII. Overhauled, and painted twice a year.
 VIII. The superintendent goes over the whole once a fortnight.
 IX. One at Silloth anchorage, being a mast with cross and ball, and one on Cardunock Scar mast and black cross.
 XI. When required, iron instead of wood.
 XII. See answer to No. V.
 XIII. None.
 XIV. 1½*d.* per ton on vessels in and out harbour offices.
 XV. None.
 XVI. Average annual income for last five years, 359*l.* average annual outlay for last five years, 785*l.*
 XVII. No applications or suggestions, except by the superintendent, and carried into effect.
 XVIII. None.
 XIX. W. Geddes, Superintendent for the Company.
 XX. None.
 XXI. Notice to pilots, harbour offices, and advertisements in newspapers and harbour bills.
 XXII. Yes, the superintendent.
 XXIII. Report to Trinity.
 XXIV. None.
 XXV. Superintendent to survey Channel buoys and lights, and report to this Company once a fortnight.

LLOYD'S EVIDENCE.

Circular VI.

- I. John Nicholson and Co., merchants, shipowners, and shipbuilders, N. B.
 II. The SOLWAY FRITH, from the Solway floating light ship to Annan.
 III. The Carlisle and Silloth Dock and Railway Company.
 IV. No.
 V. The buoys are correctly enough placed, as far as they go, but are too small and too far apart.
 VI. One large red buoy on the north-west side of Silloth Bank, a large black buoy on the south side of Maria Bank, a large chequer perch-buoy in the Fairway, and a lightship moored a little to the west of No. 5 buoy. There being at present only one buoy at the entrance of this, the direct channel to Annan, is the reason of the foregoing application.
 VII. Oil.
 VIII. Not aware of the lights having been extinguished, nor duly exhibited.
 IX. The buoys have been replaced at once after being displaced.
 X. The schooner "Mary," of Carlisle, in attempting to take the channel, proposed to be buoyed and lighted as above, went on shore on Silloth Bank and became a wreck, in consequence of being unable to make the buoy at the entrance, it being run down from its small size, in Aug. 1859. The schooner "St. Winifred," of Liverpool was lost turning up at night, in May 1857.
 XI. None used and none required.
 XII. Bells are rung at Annan Waterfoot, Silloth, and floating light, but from their small size are not heard at any great distance.
 XIII. Red, black, and chequered. Red, can buoys; black, nun buoys; chequered, nun buoy with a perch. Red on starboard side from sea; black on port; chequer in fairway.
 XIV. No.
 XV. Yes; 3*d.* per ton to the Carlisle and Silloth Railway Company.
 XVI. No formal complaint ever made to our knowledge.
 XVII. The general feeling of mariners is, that the buoys are insufficient in number, and too small.
 XVIII. That the charge is too high for the accommodation.
 XIX. We have no means of knowing.
 XX. In consequence of the opening of the Silloth Dock, the steamer and foreign trade vessels with cargoes for Carlisle, which previously came to Carlisle, end their voyages at Silloth. The opinion is that the Silloth Dock and Railway Company will not now have the same interest in keeping the upper part of the Frith so efficiently buoyed as formerly.
 P.S.—Several of the scours in the upper part of the Frith should have perches placed on them to show their position.

CARLISLE.
Circular III.

CARLISLE and DARTMOUTH.
Lights and Buoys, Solway Frith.

Railway and Steam Navigation Office,
Carlisle, Jan. 5, 1860.

Circular V.

SIR,

I BEG to return you one of the Royal Commission Inquiry Papers, with queries answered by Messrs. John Nicholson and Co., Annan, and those answers confirmed by thirteen masters of vessels frequenting the Solway Frith, in all the essential portions of their answers. I also concur, and have always been of opinion that vessels going into Maryport should contribute towards the maintenance of the buoys and lights to the eastward in the Solway Frith, as in stormy weather vessels bound for that port frequently, in certain states of the wind and tide, run up into Silloth Bay for safety, and that without contributing to the funds. The Solway lightship is moreover of good stead in assisting vessels to make the port of Maryport in dark weather; and I am further of opinion the management would be much better under the Trinity Board altogether.

Your obedient servant.

Capt. Halstead, R.N.,
Lloyd's, London.

E. JOBLING,
Lloyd's Agent.

WE, the undersigned captains of vessels belonging to and trading from the port of Annan, having read the answers to the questions in the paper accompanying this, hereby express our entire concurrence in them:—

John Rodrick, brig "James Reddin."
Francis Maxwell, brig "Helen Douglas."
James Hastie, flat "Black Diamond."
Thomas Bell, schooner "Susan."
John Faulden, schooner "Circassian."
John Richardson, "Prosperity," of Annan.
John Irving, A. & W. trader.
Joseph Johnstone, schooner "Suffolk Hero."
Robert Lomas, schooner "Syren," of Annan.
John Irving, schooner "Corby Castle."
Hugh Davidson, schooner "Dryad."
George Irving, "John and Mary."
Matthew Irving, "Fidelity," Annan.

22. COCKERMOUTH.*

23. DARTMOUTH.

(See also page 43.)

LLOYD'S EVIDENCE.

- I. Thomas P. Tipper, harbour master.
- II. DARTMOUTH.
- III. Town Council of Dartmouth. The Trinity Board placed the buoys many years ago, since which time they have declined having any further charge of them.
- IV. I do not.
- V. I consider that the Nimble rock should be buoyed, and there could be an improvement in the light, and the Pin rock should be blown up at a trifling expense.
- VI. The Nimble rock is about one mile to the eastward of the Eastern Black Stone, and a very dangerous rock. I would recommend a beacon on the eastern side of the harbour, which the Trinity Brethren has had some time under consideration.
- VII. Oil, but I consider gas would give a better light, and could be conducted to the lighthouse at a reasonable expense.
- VIII. The lighthouse has been erected three years; was first lighted on the 1st of January, 1857. During the time it has been lighted it has been the means of saving many ships.
- IX. The buoys have been displaced many times. The Pin buoy and the Checkstone do. are both adrift at the present, and have been for the last two months. There is not any convenience in the port for overhauling the buoys, which ought to be done once a year.
- X. The Nimble revenue cutter was lost on the Nimble rock, and several other ships have struck on the same rock within the last four years, two of them large ships, which went to Plymouth for repairs.
- XIII. Checkstone buoy, chequered; Castle Ledge buoy, black; Homestone buoy, black and white rings; Pin buoy, red.
- XV. One farthing per ton, register tonnage, received by me, and 6d. out of each ship goes to the corporation, which is deducted off the farthing per ton. The harbour duties are not compulsory.

DARTMOUTH.

DARTMO

- XVI. I have heard many masters find fault that there is not a beacon erected, and the light is not so good as it ought to be.
- XVII. The opinion is as I have stated, that there could be an improvement in the light, and the Nimble rock buoyed and beacon placed.
- XVIII. I find that many object to pay, and others think it a very reasonable charge. Brixham ships in general object to the charge. My opinion is, that if any excessive charge was made that ships would rather stop at sea.
- XIX. Yes.
- XX. The light could not be managed better than it is, as the funds would not admit of it. The buoys are very often adrift for want of proper convenience to replace them.

I. Richard Langworthy Hingston, Dartmouth, Lloyd's Circular agent.

II. DARTMOUTH.

- III. The Town Council, Dartmouth, but not responsible.
- IV. The port is fairly buoyed, if kept in order. I should think a beacon on the other side of the river at the centre of the harbour desirable.
- VI. A beacon on the high ground or hills beyond King-swear Castle would be desirable, as the harbour is a blind one, and not so well known as its excellence merits.
- VII. Oil.
- VIII. Since a lighthouse was built at the expense of the town, the light has been carefully kept up, with a competent person in charge. Before this I am not aware of any accident having occurred, through light not being exhibited.
- IX. After a heavy gale buoys break adrift, but soon replaced.
- X. None.
- XI. None used or required.
- XII. None used or required.
- XIII. Checkstone buoy, chequered; Castle Ledge buoy, black; Homestone buoy, black and white rings; Pin buoy, red.
- XIV. No.
- XV. One farthing per register ton received and collected by the harbour master to maintain the light, out of which 6d. per ship is paid to the Town Council, the remainder is optional, and no means of enforcing payment.
- XVI. No complaints, but a beacon would be very desirable.
- XVII. An improvement could be made on the light.
- XVIII. There is a difference in opinion on this subject.
- XIX. Yes.
- XX. Could not be better managed according to the funds.

I. John Bulley, Dartmouth, late master mariner, E.I.S. Circular

II. DARTMOUTH.

- III. The light and buoys are supported by the town.
- IV. I consider the coast adjacent well lighted and buoyed. I consider a beacon on the eastern entrance to the harbour would tend very materially to identify the harbour, coming from the south-west more particularly.
- VI. I would strongly recommend this beacon to be erected on the top of the inner froward, for the following reasons: the land being higher than the outer froward, and equally open from the east, south-east, south, and south-west. And also being nearer the entrance to the harbour, ships steering for it would be sure to be enabled to fetch the harbour, or the roads, whichever way the wind was, and would also steer clear of all danger. If it were placed on the outer froward, ships steering from the south-west for it would find themselves too far to the southward when they opened the harbour, with a strong N.N.W. wind, to fetch into the roads. The harbour light oil is used.
- VIII. Not to my knowledge.
- IX. The buoy that was placed on the Pin rock was washed away in the gale on the 25th of October last.
- X. I know of none.
- XI. Dartmouth harbour is accessible at all times of tide, therefore no signals are necessary.
- XIV. None.
- XV. One farthing per ton is levied on vessels entering the port, for supporting the light, collected by the harbour master.
- XVII. The light and buoys are never complained of, but I believe most mariners would think a beacon desirable.

DARTMOUTH and DERRY.

- OUTH.
 XVIII. We have at times some difficulty in collecting the farthing per ton for supporting the light, having no power by law to enforce the payment.
 XIX. They are.

24. DERBY—MORECAMBE.

MORECAMBE LIGHTHOUSE.—(SPECIAL RETURN.)

 LVI. None.
 LVII. None required.
 LVIII. The only regulation is, that the light be exhibited from sunset to sunrise.

MORECAMBE HARBOUR.

RULES for the LIGHTKEEPERS of the SCREW PILE
LIGHTHOUSE ON CLARKE'S WHARF.

1st. That they are the servants of the North-western Railway Company, and are subject to the same rules and regulations as other servants of the said Company.

2nd. They shall sign a declaration that they accept the situation, subject to the risks of remaining on the lighthouse, or of being taken in boats to and from it, and with a full knowledge of its structure, and of all other risks incident to the situation.

3rd. That of the three lightkeepers two shall always remain on the lighthouse, and the third shall be on shore a week.

4th. The men on duty shall keep watch six hours each. The man who has the afternoon watch shall, before sunset, see that the lamps and reflectors are in proper order, and at sunset light the same; during the night watches each must take care that the lamp is constantly burning properly and clearly.

5th. The man who has the morning watch shall extinguish the light at sunrise, clean the reflectors, trim the lamps, and clean out the living room properly.

6th. They must jointly clean out all closets, cupboards, and storerooms, and keep everything else clean and in proper order and condition.

7th. The machinery of the fog signal must be kept wound up, and in foggy weather or snow the bell must be

DERBY.

DERBY.

constantly ringing, and in such cases, if needed, both keepers must be on duty.

8th. It shall be deemed a fog when the No. 1 black buoy cannot be seen between sunset and sunrise.

9th. That the green light be lit at night, and the ball be hoisted in the day at such times as the keepers shall consider there is 8 feet water up to the pier.

10th. That a logbook be kept, in which shall be entered he times of relief, state of the weather, and any other matters.

11th. That great care be at all times taken to prevent accident by fire.

12th. In case any accident has happened, or anything is required specially, a union jack must be hoisted, when a boat will be sent.

13th. The lightkeeper off duty shall, at least once a day go to the pier and see if any signal is flying, and shall also get ready all coals and water and stores, and also go to the house of the man remaining on duty, and take down his provisions or clothes.

14th. That the man whose duty is ended, be relieved every Wednesday, when possible at the last quater's ebb, or dead low water, so that the relieving boat may be in as little danger as possible from contact with the piles; the time of relief to be fixed by the captain of the tug or the boatmen.

15th. That the bell be struck three times when any of the company's steamboats are passing, as a signal that all is right.

16th. That all reports be made to the harbour master, and all orders be received from him.

17th. That all requisitions for stores be made a month before being required, so as ensure a proper supply.

18th. The lifeboat attached to the house must not be used for pleasure or for fishing, but only in cases of necessity.

XVII. None.

XVIII. None.

XIX. By the harbour master and workmen of the Company.

XX. Same.

XXI. By advertisement and circulars.

XXII. Harbour master and Company's engineer.

XXIII. By letter, by post, or by train.

XXIV. None.

XXV. The buoys originally laid down floated on their quarters, all of which (except one) have been replaced by others floating on end. Buoys on the latter principle are now being made of iron for this place.

XXVI., XXVII. None.

25. DOVER.

Dov

Circular

LIGHTHOUSE.—(SPECIAL RETURN.

I. Dover Harbour.

II. The Honourable Warden and Assistants, Council House, Dover.

III. John Iron, Harbour-master, Dover.

IV. Five lights, for a description of which see the printed handbill annexed.

X. Harbour.

XI. The two wooden staffs on which the two large red lights named in the printed bill are hoisted rise from a circular timber building painted white. The small low red lights also named in such bill, one of them being however always used with large red lights, are shown from iron columns, painted lead colour, as is also the green light referred to in the said bill.

XIII. The staffs are respectively 60 feet and 50 feet in height, the columns for the low red light each about 6 feet, and the column for the green light 12 feet.

XIV. Large red lights, respectively 75 feet and 65 feet; the low red lights 21 feet, and the green light 18 feet.

XVI. The large red lights from 12 to 14 miles, the low red lights 10 miles, and the green light 4 miles.

XVIII. Fixed, the colours being before given.

XX. During such periods of tide as are specified in printed bill.

XXII. Two Argand gas burners to each large red light, one only of oil to small red lights, and one batwing burner (gas) to green light.

XXVI. Bell on south pier.

XXVII. No register kept.

XXVIII. The like.

XXXV. One, the deputy harbour master, whose salary is 100*l.* per annum, for which he performs other duties.

XLII. The revenues of the harbour.

XLVIII., XLIX. None.

LV. See printed handbill.

NOTICE TO MARINERS.

Alteration of Tidal Signals at Dover Harbour.

Notice is hereby given, that on and after the first day of January 1852, the following tidal signals will be exhibited at Dover Harbour instead of those now in use:—

Depth of Water on Ebb and Flow by Index at North Pier.	Day Signals.	Night Signals.
7 to 10 feet.	Red flag with a black ball under at the customary staff on the south pier.	A small low red light on the north pier, and a similar light on the outer extremity of the south pier.
10 to 13 feet.	Red flag on the same staff.	The lights now in use, viz. two large red lights on the signal staffs of the south pier, and the above mentioned small low red light on the north pier.
13 feet & upwards	Red flag with a black ball over on the like staff.	Lights as above.

BUOYS AND BEACONS.

I. The Midland Railway Company, Derby, as lessees of the railway and works.

II. The accompanying charts will show the jurisdiction, and the printed sailing directions will give the positions of the buoys and beacons. No special account is kept of the expenses of, or income derived from the buoys and beacons. The total income and expenditure for the periods named is given in the Lighthouse Return, No. 1.

III. No.

IV. None.

V. The printed sailing directions attached designates the buoys in the Channel.

a. Wood.

b. 7*l.* to 20*l.*

c. 3*s.*

d. 10*s.* per annum.

e. The buoys in the Channel are, one large outer buoy, black, one red perch buoy, (see sketch) three ordinary 12 feet channel buoys, red, two black buoys, and four mooring buoys in the harbour.

f, g, h. There are none in reserve at present, but some iron buoys are being built.

i. Four.

j. Two are supposed to have been run down by vessels, and two have broken adrift in storms.

k. Large stone and chain.

l. Chain 12*l.* stone and bolt 17*s.* 6*d.*, and fixing 2*s.*

m. Repairs are done by the Company's servants.

n. By size, by perch, and by mode of flotation.

o. Three.

VI. The floating perpendicular buoy for both.

VII. Twelve months.

VIII. None.

IX., X. Five beacons were originally put down, but four of them were soon destroyed by bad weather, or by vessels coming in contact with them, and were not replaced, buoys being substituted in preference.

XI. The floating perpendicular buoy is now the one in general use.

XII. The buoys define the margin of the channel; red buoys being on the starboard, black on the port hand.

XIII. One beacon on starboard hand.

XIV., XV., XVI. See answers to XLII., XLIII., XLIV., Lighthouse Special Return, No. 1. The amounts there given include receipts and expenses on light-houses, buoys, and beacons.

Circular V.

DOVER.

A brilliant green light projecting its rays towards the harbour's mouth will be exhibited throughout the night, by the clock tower in the inner part of the harbour, and will show midway between the piers.

No signal to ships in general will be made between seven feet at ebb and seven feet at flood, by the index board, and whenever, at other times, the harbour is inaccessible to vessels, the flag (if in the day) will be pulled down, and (if at night) the light or lights on the south pier will be extinguished, and only upon the former being rehoisted, or the latter relighted, can the harbour be entered.

By order of the Honourable Warden and Assistants of Dover Harbour,

G. T. THOMPSON,
Registrar.

Dover, 11th September, 1851.

June 5.—Admiral Hamilton, Captain Ryder, and the Secretary inspected the lights at Dover.

The light at the end of the new Mole is a blue light, a gas burner in a lamp with a blue shade. The effect of this light was remarked previously, see Personal Observations, vol. I. On this occasion it was explained that the late storm had injured the gas pipe, and that the light was shown from a small lantern placed for the time.

This light is only intended to keep vessels off the new works, and is under the charge of the Government.

The red harbour light is produced by two lamps, which are hoisted on separate masts. The flame is gas, and is kept constantly burning, so that it is only necessary to turn up the gas in the morning. There are two silvered reflectors, and the lantern is surrounded with red glass. The reflectors were encrusted with dirt. The glass of the lantern covered with soot, which adhered to the fingers when the glass was touched in the inside. The glass was also covered with condensed moisture, even with the gas burning low. It was evident that the lantern and reflectors had not been cleaned for a long time. On endeavouring to use one of the reflectors as a burning speculum in the sun, it was found impossible to get even a tolerable focus, a small silvered glass speculum of three inches would have produced more effect. The place where the lanterns are lowered during the day was locked, the key lost, and it was found necessary to break into it with a hammer.

The green light is produced in a common street lamp glazed with green glass, and placed at such a height that the sails of a boat passing in front of it obscured the light. The back of the lamp is occupied by an opaque screen, with a reflector, which the harbour master stated to be made of glass, and subsequently of glass covered with a peculiar composition. On examining it somewhat closer it turned out to be tin painted white, and considerably smoked.

It was suggested by one of the Commissioners that this material would not be so liable to injury as the silver, and the harbour master stated that such was the case.

It was subsequently stated that the gas company have charge of this lamp, and that they had removed the glass reflector to send it to London to try if one like it could be got. It appeared to the Commissioners that the harbour lights at Dover required superintendence.

Steamed round the back of the Goodwin, and observed the large buoys there placed. There was a strong tide running, a considerable sea on, and a strong breeze, and the buoys rode upright and steadily.

They were conspicuous at a great distance, and presented a remarkable contrast to the buoys in the Solent.

They are coloured black, red, and black and white, in stripes, each has some distinctive peculiarity of form, such as a square, or triangle, or ball on the apex of the cone. A wreck buoy, smaller, painted green, and of the form called nun, was observed. It was almost under water, and as an example of the old system was a remarkable contrast to the new buoys, of which the Commissioners expressed their high approval.

The Chairman boarded the Goodwin or North Sand Head lightvessel with some difficulty, owing to the tide and the sea. She was in good order.

LLOYD'S EVIDENCE.

I. James A. Crundall, Dover, master mariner.

II. DOVER.

III. Mr. J. Iron, harbour master, Dover.

IV. No.

V. I consider the lights on the piers are not lofty enough to be seen to the westward, over the Admiralty Pier, and that they have not sufficient power to be seen any distance. I would suggest that the buoys off the Admiralty Pier had beacons on them, as they are run under by the tide, and are dangerous to shipping coming close round the pier.

II.

DOVER and FAVERSHAM.

DOVER.

Circular VI.

VI. I would recommend a floating light to be placed near the Varne or Ridge, as it was only last week an outward bound ship was lost there, the crew and passengers, numbering nearly 60, being all lost. The light on the end of the Admiralty Pier is green, and very inferior.

VII. Oil and gas are used for the harbour lights at this port.

VIII. I do not recollect any instance of the lights not being duly exhibited or of any accident happening in consequence.

IX. The buoys in the harbour have several times broken adrift in consequence of the moorings not being sufficiently strong, and ships damaged thereby.

X. I consider that the ship happened to be lost last week on the Varne or Ridge might have been saved had there been a light there.

XI. The tide signals used at this port are a red flag with ball under from seven to ten feet, ten to thirteen red flag above, and from thirteen upward red flag with ball uppermost.

XII. I do not know of any fog signals in use by the harbour. I think a gong would be very useful at tide time in foggy weather.

XIII. The buoys in this port are square, and are coloured black with coal tar.

XIV. I would recommend them to be in the form of a pear as at present they go under water directly a strain comes on them.

XV. I am not aware of any.

XVI. I have known of complaints being made about the buoys, but cannot state the time.

XVII. About the same as my own.

XVIII. I cannot say I am not aware of any charge being made expressly for lights or buoys. I presume it is included in the harbour dues, which are generally unsatisfactory.

XIX. I do not know.

XX. I am not.

I. Latham & Co., merchants and ship agents, and agents to Lloyd's, Dover.

Circular VI.

II. The PORT of DOVER and COAST adjacent.

III. The Commissioners of Dover Harbour for the lights and buoys of the port.

IV. Yes.

VII. Oil and gas in Dover Harbour, electric light and oil at the South Foreland, and oil at Dungeness.

VIII. We are not aware of any such occurrence.

IX. We are not aware of any such occurrence.

X. We know of none.

XI. Two red lights on the south pier and one red light on the north pier, when there is 8 feet water and above in the harbour, and a red flag in the daytime is hoisted on the south pier to denote the same.

XII. Guns and fog bell.

XIII. Square buoys painted black; but only for mooring buoys, no other buoys required.

XIV. We have no change to recommend.

XV. None.

XVI. No complaint to our knowledge with reference to lights, buoys, or beacons, have been made.

XVII. We believe the general opinion to be that the lights, buoys, and beacons are very good and efficient for the purposes required.

XVIII. We have no local dues in respect of lights, buoys, or beacons.

XIX. None collected.

XX. We are not aware that any other than an opinion of satisfaction prevails.

28th December 1859.

26. FAVERSHAM.

FAVERSHAM.

BUOYS AND BEACONS.

I. W. A. Chambers, Bridge House, Preston, Faversham, Superintendent of the Faversham Navigation, and Water Bailiff.

Q q

FAVERSHAM.

FAVERSHAM.

- Circular V.
- II. The Faversham navigation is a creek about two miles inland of the East Swale; requires no buoys; we have a few stick beacons only. The charges for anchorage and beacons are, 1s. for a barge, 2s. for small ships, and 3s. for large ships. The income is about 20*l.* a year. The stick beacons and collecting are paid from the amount; the remainder at the disposal of the Lord of the Manor.
- III. To the Lord of the Manor and the Commissioners of the Faversham Navigation.
- IV. James Lightfoot, Dredger, of Faversham. Is a water bailiff. His duty is to prevent ships and boats anchoring on the oyster beds.
- V. There is one buoy at the entrance of the creek, and one at the sand end of the horse, which the Trinity attend to.
- Wood.
 - Do not know.
 - Do not know.
 - Do not know.
 - Two.
 - One for each.
 - On board the Trinity vessel.
 - Do not know.
 - None.
 - When there is displacement it is when ships or barges make fast to them; it seldom happens.
 - With chain and stone sinker.
 - Do not know.
 - Do not know.
 - One painted letter spit buoy, the other sand end buoy.
 - Two.
- VI. Nun boys.
- VII. Ours are often inspected by the Trinity, and when required to be repaired are taken away and put down.
- VIII. When any damage occurs to them I report it to the Collector of the Faversham Customs, and he to the Trinity.
- IX. There are no beacons only those belonging to the oyster company, which are show beacons, about 30 feet long, five inches in the middle.
- X. About 20.
- No specific name.
 - For centuries.
 - To divide the oyster beds.
 - Not required.
 - Norway spars, 5 inches middle.
 - Black.
 - Not lighted.
 - Four to six feet
 - About 2*l.*
 - 1852, 6*l.* 10s. 1858, 3*l.* 10s.
 - No income.
- XI. We have no change.
- XII. If any are destroyed they are replaced immediately.
- XIII. We have no places but what are attended to.
- XIV. The Company of Dredgers.
- XV. The stick beacons are paid for out of the water bailiff dues at my office.
- XVI. No income; the expenditure is by the oyster company.
- XVII. None.
- XVIII. None.
- XIX. By the Trinity; have no dates.
- XX. The foreman of the oyster company.
- XXI. I inform the Collector of Customs, he writes to the Trinity.
- XXII. No, there is not; but I always receive early information.
- XXIII. As described in XXI.
- XXIV. None.
- Answered in XVI.

The East Swale is held by the oyster company under the Right Hon. Lord Sonds, and has been for centuries. The present foreman of the company is Mr. W. Clark. If you require any other information about the Swale he will give it you; or any other information about the Faversham Navigation, Mr. Jassel, Solicitor, Faversham, who is clerk to the Commissioners, will give it you.

27. FLEETWOOD.

These lights were visited on the 24th of August by Dr. Gladstone;—the upper light in the evening, and both in the morning. They stand 139-140 on the list of lights visited or seen afloat. They are tide lights, and lead into the harbour. They are lighted at half tide, which is notified by twisting a ball high, well built of stone, which is kept of the natural colour, the lantern being painted red. The lower light is in a building on the beach, 40 feet high, of stone, unpainted; built in 1840. Both houses appeared neat and clean. They are kept by two men, who remain with their respective lights when they are burning. Gas is burned in each, and each is provided with a large parabolic reflector. The gas is the same with which the town is lighted. It was burning well and brightly at the time of the evening visit, but it is said sometimes to "wink," and once the light in the lower lighthouse went out. This was on the occasion of the Queen's visit, and happened just as she was entering the harbour; the cause probably being that many additional burners were just then lighted at the large hotel close by, which diverted all the gas for a short time. The chimnies rarely break. The reflector in the upper lighthouse is remarkably well kept; that in the lower is scratched, and shows signs of rough handling. Accounts are kept of the times of lighting and extinguishing gas, and of the state of the weather. Small cannons are fired during fogs in answer to vessels signalling distress.

There are three small beacons; black poles with four stays marking channels.

There are also eight buoys—nun, black—inspected regularly. Duplicates are kept on shore.

Besides these a large beacon belonging to the Trinity House was looked at from a distance.

28. FOWEY.

LLOYD'S EVIDENCE.

- I. Wm. Lowry, Lloyd's agent, Fowey.
- II. FOWEY.
- III. The corporation of Lostwithiel receive dues on all vessels that enter this harbour, but will do nothing else.
- IV. No.
- V. There are no lights within this port.
- VI. I would suggest a light being erected at the entrance of Fowey Harbour, first, because it is not distinguishable by vessels coming from the eastward; secondly, there is no harbour but Fowey, between Falmouth and Plymouth, where vessels can run for refuge; and, thirdly, vessels bound to Falmouth for orders, in thick weather, frequently overshoot that port, and for want of a light pass Fowey Harbour, and thereby incur further danger.
- X. Within the last three years three vessels have been stranded on Par Sands (about four miles westward of this harbour), the masters believing at the time they were running into Falmouth Harbour, taking the Gribbin Head for St. Anthony's Point. In strong gales from south-south-west to south-south-east, and vessels embayed between Falmouth and Plymouth, there is no harbour for refuge but Fowey. In the year 1838 two vessels were wrecked near Looe, and in 1850 one near Polperro, which no doubt would have been saved had there been a light for this harbour.
- XI. None used or wanted.
- XII. None used; do not think them necessary for the port.
- XIII. None.
- XV. There is 1s. 4*d.* per vessel charged by the corporation of Lostwithiel for anchorage.

FOWEY, GOOLE, and GUERNSEY.

lar VI. XVII. My opinion is, that the general feeling of mariners are that a light is required for Fowey Harbour, for the reason that, during the dark winter months even vessels belonging to the port wait outside, the masters not being able to distinguish the entrance, thereby incurring great danger.

lar IV. I. Lieut. Wm. F. Essell, R. N., Fowey.
II. FOWEY.

III. The corporation of Lostwithiel.

VI. I conceive a light placed on a spot abreast of White House would be highly advantageous as a leading mark into the harbour by night, to be so placed as, when visible from seaward, will lead a ship clear of the Carnes Rock into the harbour; at the same time, I think it an indispensable condition that the corporation of Lostwithiel, who have the control of the harbour, should appoint an harbour-master, sufficiently authorized to regulate the proper berthing of vessels, so as to leave a clear fair way in, and that vessels be not allowed, as now is the practice, to anchor and moor anywhere, without reference to other ships that may arrive.

29. GOOLE.

LLOYD'S EVIDENCE.

lar VI. I. Thomas Woodhead, South Sheet, Goole, Master Mariner.
II. From HULL to GOOLE.

III. The Worshipful the Wardens, Elder Brethren of the Trinity House, Kingston-upon-Hull.

IV. No.

V. As there is neither buoy, beacon, or light between the port of Hull and Goole, (one wreck buoy excepted,) any of the aforesaid would be an improvement.

VI. First, one light at Chaldersness for a guide into South Channel; second, one light upon Wiltonness to shade three different colours, as a guide round the Ness, and up Wilton Channel; two leading lights at Wilton, as a guide from north to south shore, and vice versa, one of the lights to be easily shifted, as the channel might shift a little lower down or higher up; and one light on Flaxtleness. The whole of the above lights would only require to be of a small description to be seen, say, three or four miles off.

X. Accidents have been numerous of a minor sort, but the want of lights prevents the river from being navigated at night time, which is a great drawback to the port of Goole, with its increasing steam trade.

XV. A vessel of 188 tons register pays 10s. 6d. per voyage to the Trinity House and Corporation of Kingston-upon-Hull.

XVIII. The general feeling of mariners belonging to the Port of Goole is, that the dues are excessive, considering there are no lights between Hull and Goole.

30. GUERNSEY.

LIGHTHOUSE.—(SPECIAL RETURN.)

(There are no lighthouses attached to the island of Guernsey.)

NOTES BY CAPT. RYDER.

Wednesday, 5th October.—Left Southampton for Guernsey in "Courier," Captain Goodrich.

He thinks all the buoys in the Solent too small. Not fog bells enough. Prefers a gun fired at moderate intervals, say from 5 to 12 minutes; interval varying with the site, as a means of identification.

GUERNSEY.

GUERNSEY.

Observations by Commissioners.

Captain Goodrich gave the following evidence.

Floating light off Southampton Water should be moved further out towards the Spit.

New Needles light is a very useful light. A great improvement on the old high light; but has too many changes of colour; they are confusing. All light-houses ought to be coloured red, or some dark colour. The *Sherries* off the Start ought to be better marked.

There are no lights at Channel Islands; they are very much required. Has suggested to the Estates a buoy, with a fog bell, to be placed at the north entrance of the Little Russel Channel.

Never saw any notice of the new lightship on the Shambles until after he saw her. Heard from a captain, that he nearly run her down. Never received the new directions to avoid collisions. Thinks a more systematic way of distributing navigation notices would be very valuable.

The notices at the Custom House are seldom read or remembered.

In making Guernsey from the northward, Herm Island, being not unlike the north part of Guernsey, in thick weather care must be exercised lest the latter is mistaken for the former, which would be fatal.

Several buoys are required.

One at Plat Boue, north of Herm.

One bell buoy north-east of Plat Fources, north of Guernsey.

One buoy on the Agenor Shoal, north point of Guernsey Roads.

One buoy on Les Têtes d'Aval, south of Herm.

One buoy or beacon, on Les Grunes de Serbourg, south of Guernsey.

Brehon beacon is now a fort.

The Great Bank ought to be buoyed for large vessels.

The new lighthouse building at Les Harois should show red towards north shoals.

If South Martin Points and Brehon Fort were lighted, there would be a safe leading mark for the anchorage from the northward.

Blanchard Rock, east of Jersey, ought to be buoyed.

La Pierre au Vach, south-west of Alderney, ought to be buoyed.

A gun at Casquets would be very useful. There is a fog bell there; but I have frequently passed close to the island in thick fogs, and never heard the bell.

Blanchard Rock, east of Alderney, ought to be buoyed.

At the Harbour Office.

Mr. Saumarez Carey, deputy, showed the model of a bell buoy constructed by Captain Goodrich.

Peter Corbett, Pilot.—Cannot hear the fog bell at Casquette more than one mile. The lights are good. The harbour light of Guernsey is well placed, and is to be made more powerful.

A light on Brehon Fort and the South Martin Point would be very useful.

Abraham Dumaille, and Stephen Dumaille, the "Charlotte," cutter, Southampton; Peter Jordan, of the "Cesar," coasting trader:—

Bell at Casquets insufficient. A good fog signal there would be very useful. No French pilots know these dangers well. Sereq very dangerous; but cannot suggest any remedy.

Jersey.—A light at La Corbière would be very useful. Red to the northward.

The beacon on La Sellette should be enlarged.

Grandfour, Pignaut, and Diamond Rocks, should be marked.

A beacon should be placed on Honguet.

The harbour light purposes only to light west passage; so eastern passage is unlighted.

St Catherine light is useful, north of Jersey.

GUERNSEY.
Circular III.
Observations
by Commis-
sioners.

GUERNSEY.

Mr. A. Tupper, Magistrate.—Guernsey, as regards dues, is considered by the Home Government as "over-sea." The Trinity Board suggested to the Estates that they should be placed on the footing of the coasting trade; but when they, the Trinity Board, found out that by so doing 2,400*l.* less dues would be paid, they withdrew the suggestion.

The receipts of dues of various kinds amount to about 8,000*l.* a year. Some portion of this is mortgaged to pay interest of their debt, which is increasing, as they improve the harbour.

Mr. Jones, agent of Weymouth line, has not heard any complaints from his captains; but is aware that many improvements might be made; thinks the Small Russell Channel might be better buoyed.

I visited the *Pier Light*. It is placed on the top of a tower on the pier end. The tower was apparently built in 1774 as a sea mark, and was lighted in 1831. The lantern is constructed of wood and glass; the wooden uprights being so broad and clumsy as to eclipse about one-sixth of the horizon.

The gas for the lamp and for six pier lights, and the cleaning of the lamps, &c. is contracted for by the gas company for 100*l.* a year.

An old man, named Newberry, a gasman, lights and extinguishes the lamps. His pay for this and other duties at the gasworks is 1*l.* a week. Nobody remains at the light at night, but he would be sent for if anything was wrong. The glass appeared dirty and cracked, and the ladders and every part of the house was dirty and neglected, the roof black and charred. Newberry is only paid for lighting and cleaning glass. The harbour master considered the gas was frequently not turned on full.

There are six burners, placed at a considerable distance from one another.

Sometimes water gets into pipe, and then gas is extinguished for perhaps half an hour.

A. P. RYDER.

Royal Commission,
Lights, Buoys, and Beacons,
7, Millbank Street, S.W., London.

SIR,
21st December, 1859.
WITH reference to the enclosed forms, I am directed to request, that in reply to No. 15 of the General Light-house Return, a precise statement may be given of income and expenditure.

I am, &c.

J. F. CAMPBELL.

[This letter was accompanied by the forms which were sent to the other local authorities, asking information relative to local lights.]

Pier Office, Guernsey,
3rd January, 1860.

SIR,
I HAVE the honour to return herewith enclosed the form or return on lighthouses, &c. filled up relative to this island, and I beg to say that there are no lighthouses attached to Guernsey.

I am, &c.

NICHOLAS LE MESSURIEU,
Harbour Master.

J. F. Campbell, Esq., Secretary,
&c. &c.

[The lighthouse forms were not filled up, but another form was sent, from which it appeared that there is a lighthouse under the management of the local authority, and that it is defective.]

Royal Commission,
Lights, Buoys, and Beacons,
7, Millbank Street, S.W., London.

SIR,
6th January, 1860.
I AM directed to call your attention to the statement in a return signed by you, in which reference is made to a light on the South Pierheads ("defective"), and to request your attention to the foot note in the enclosed forms, which I am to request you to fill up.

I am, &c.

J. F. CAMPBELL,
Secretary.

GUERNSEY.

Pier Office, Guernsey.

SIR,
19th January, 1860.
IN answer to your letter of the 7th instant, enclosing certain forms, I have to observe that the word "defective" used by me in reference to the light on the South Pierhead, had reference not to the light itself, which is of gas, but to the lantern, the frame of which is of wood, and of such size as to somewhat intercept the light, which thus is defective. The lantern would probably have been altered previously to this had it not been in contemplation in the execution of the harbour works now in progress, to erect a new tower and lantern. Consequently the authorities have retained the old lantern for the present to avoid unnecessary expense, and further, I beg to repeat that there are no lighthouses attached to Guernsey.

I have, &c.

NICHOLAS LE MESSURIEU,
Harbour Master.

J. F. Campbell, Esq.,
Secretary.

From this return of correspondence it appears that the lighthouse at the pier at Guernsey is not a lighthouse attached to Guernsey, and thus numerous wrecks occur on the island.

BUOYS AND BEACONS.

- I. Sausmarcz Carey, Esq., Supervisor of Harbours and Treasurer of the States for 1859.
- II. No official chart in existence, but the supervisor provides buoys and beacons where thought necessary. No income is derived therefrom, and the expense of the same is defrayed out of the general harbour revenue.
- III. The Royal Court and the states of Guernsey.
- IV. The harbour master of St. Peter's Port and the harbour master of St. Sampson act under the supervisor, and are responsible to him.
- V. The buoys are not classified. There are only two guiding buoys, which are placed in the small Russell, both conical. The other buoys are mooring buoys.

a. Wood.

b. The Russell buoys each cost about 4*l.*

c. *Sl.* each.

d. Painting included in the *Sl.* above stated.

e. Two.

f. Three.

g. All kept in the States' store at St. Sampson's harbour.

h. Three.

i. None.

j. Nil.

k. Moored with chains and anchors.

l. The buoys are moored in about 10 fathoms.

m. By tender.

n. The buoys are distinguished by one being red and the other black.

o. Two.

VI. Conical in all cases.

VII. Semi-annual, at which time the buoys are changed.

VIII. None but as stated in answer to No. VII.

IX. Not classified.

X., a, b. The Round House, South Pier Head, erected in its presumed in 1621, and probably rebuilt in 1774; White Rock in 1815; the Sarderette, Grandbeaux, Flat Rock, Rousse, Petit Creux, Grand Aligante, Fauxconnaire, Barlette, Tremies, Moulinet, Anfré, and Coquelin, erected since the beginning of this century. The Corbette beacon on 4th April 1859.

c. The beacons (with the exception of the Fauxconnaire and the Coquelin) stand on rocks which are covered at high water. The two excepted are on the land, and serve as marks to steer by.

d. Its peculiar shape.

e. The beacons on the rocks are of wood, those on the land are built with stone.

f. Some are white, others black, and others red.

g. The Round House on the south pier head is capped with a lantern lighted with gas, and serves as a pier light.

h. The pier light is about 40 feet; the other beacons are about ten feet, with the exception of the Fauxconnaire, which is about 150 feet, and the Coquelin, say 200 feet.

i. The rock beacons cost from 5*l.* to 50*l.* each.

j. The buoys, beacons, and light at the pier head cost about 85*l.* annually.

k. No income.

GUERNSEY.

GUERNSEY.

GUERNSEY.

- XI. No change.
- XII. Dangers are buoyed or marked, where thought necessary, and deficiencies supplied on application or petition to the aforesaid authorities.
- XIII. Dangers are buoyed or marked, where thought necessary, and deficiencies supplied, on application or petition to the aforesaid authorities.
- XIV., XV., XVI. The buoys and beacons, being considered part of the expenditure for the safety of shipping, are maintained from the revenues of the harbours.
- XVII. A petition signed by several pilots and masters of vessels, and sent in at the latter end of 1854, for a beacon on the Corbette Rock, was immediately considered and granted, and the beacon erected on the 4th April 1859.
- XVIII. No.
- XIX. By the harbour master of St. Peter's Port in May and November 1857, and in May and December 1858.
- XX. By the aforesaid harbour master each year in the summer season.
- XXI. By advertisements in the local papers.
- XXII. The harbour master.
- XXIII. The harbour masters have the means of reporting daily to the superior.
- XXIV. None.
- XXV. No.
- XXVI. None, it being a part of the harbour master's duties to inspect the same and report thereon.

- IV. Not sufficiently.
- V. A light on the Hanvis, now about to be erected, is much wanted; buoys and beacons are wanted; some will be placed shortly. The harbour light is defective, but it is believed it will soon be replaced by a better.
- VI. 1st, at the entrance of the Small Russel; 2d, on Longue Pierre, and also on Grunes Rocks, both near St. Martin's Point; 3d, on "Grunes au Nord," three miles north-west of Coho Bay; 4th, on "Sambule," south-west of said "Grunes au Nord;" 5th, on "Pêtes d'Aval," south of Ferrières, south of "Jethon;" 6th, on a rock called "Blanchard," east of Sark. Nos. 1 and 2 are petitioned for by all the captains in the trade, and will shortly be erected. No. 3. The want of a beacon, within my recollection, has caused the loss of several vessels. No. 4. The loss of two vessels, at least. No. 6. The loss of two vessels. No. 5 is the extremity of a long reef of rocks, which vessels coming from the Great Russel for the roadstead and harbour, have to round; and although there are good marks for those that know them, it would be well if the extremity of the reef were buoyed; and although accidents do not occur, vessels frequently give them so wide a berth as to lose much time very needlessly.
- VII. Gas.
- VIII. None.
- IX. Several buoys and beacons have occasionally been removed by gales and accidents, but are always replaced.
- X. The following list of vessels, whose loss and stranding I attribute to the absence of the Hanvis Light, "Grunes au Nord" beacon, &c. —

LYOYD'S EVIDENCE.

- I. Henry Tupper, Les Cotils, magistrate of the Royal Court of Guernsey, and many years Lloyd's agent.
- II. ISLAND of GUERNSEY.

GUERNSEY.

GUERNSEY.

GUERNSEY.

GUERNSEY.

- Circular VI. XI. None.
 XII. None.
 XIII. Differently coloured; some are floating buoys, but most are beacons fixed on the rocks.
 XIV. The present arrangement is good, but the number is insufficient.
 XV. None are levied specifically in respect of buoys and beacons. The harbour dues sanctioned by order in Council include everything, and the pier light; and the buoys and beacons are maintained out of the fund raised by the payment of these dues.
 XVI. I have complained of the absence of the beacon on the "Grunes au Nord" on two different occasions, but nothing has been done.
 XVII. A petition from the masters frequenting the port has lately been presented to the States, praying for the buoys at the entrance of the Small Russel, and for the beacons off St. Martin's Point, which will, I presume, be attended to; the feeling I believe to be that the States do as much as their means allow them.
 XVIII. There can be no feeling against dues that do not exist.
 XIX. The dues now levied are at present strictly applied to harbour improvements.
 XX. None adverse to the management of the local buoys and beacons; but the trade of this island with Great Britain is now made to pay nearly 3,000*l.* a year, in respect of lights, pilotage, Dover and Ramsgate dues, &c. &c., and that most unjustly, in consequence of its being treated as an oversea trade, in lieu of a coasting trade, in respect of lights, buoys, beacons, pilotage and harbour dues, as it essentially is.

- XIV. No.
 XV. No specific dues are levied on shipping in respect of local lights, buoys, or beacons.
 XVI. I know of none.
 XVII. That the light (on the pier head) is not efficient, but a change respecting this light is now in contemplation, and a requisition signed by several masters of vessels for an increase in the number of buoys and beacons has been handed over to the proper authority.
 XVIII. Vide answer to query XV.
 XIX. As above.
 XX. I am not aware of any.

Observed by Commander

The Channel Islands were visited by Admiral Hamilton, Captain Ryder, and Mr. Graves.

11th May 1860.—We ascertained that the building of a lighthouse on the Hanois Rock, at the south-west extremity was commenced.

Mr. Saumarez Carey, supervisor of the works and treasurer of the States, informed us that he had control over the funds expended on harbour purposes. The Island of Alderney is under the jurisdiction of the States of Guernsey. Under an Order of the Queen in Council of 28th July 1856, the harbour dues are liable to charges for erecting lights, buoys, and beacons, in order to facilitate navigation.

The following witnesses were examined:—

Mr. H. Tupper, magistrate, who confirmed his evidence given to Captain Ryder (see p. 10, England Local Authorities), produced a list of wrecks, stating that between the years 1835-50, 18 wrecks had occurred on the west coast of Guernsey, owing to its not being properly lighted.

The wrecks, he says, take place chiefly in the morning; the tides are very treacherous, and the inward draught is much more rapid than the outward ebb.

The lighthouse on Hanois should be high enough to throw rays to the horizon over the Island of Lihou, which would to a great extent meet the wishes of those who preferred that the lights should be placed on Lihou. Mr. Tupper admitted that the harbour light was very indifferent, but stated that it was intended to move it, and improve it when the harbour was completed. Within the last few months, since Captain Ryder's visit, a beacon on Longue Pierre and another on Les Grunes de Jerbourg have been ordered by the States. For two years the propriety of placing two buoys at the entrance of the Little Russel has been under discussion, but they are not yet in position. No toll is levied for harbour light; but 6*d.* per ton, harbour dues (the maximum) is now levied; a reduction is made in favour of coasters.

Vessels from Guernsey (if being considered as over sea) pay to the Mercantile Marine Fund for light dues, &c. 2,300*l.* a year more than if the Channel Islands were considered within the limits of the coasting trade. See the following items:—

For the year 1858 - Excess on lights	-	900
" " - Excess on Ramsgate	-	800
passing toll	-	600
" " - Excess on pilotage	-	600
		£2,300

And Jersey pays about 1,700*l.* in excess under the same heads.

Captain Le Fevre, R.N., desired to press upon the Royal Commission the great importance of making the Hanois light very distinct in character from any English light, for which it might otherwise be mistaken as the Start, Scilly, Bishop, &c.

Commander P. De Saumarez R.N., of H.M.S. *Dasher*, desired to state that he agreed with the preceding evidence.

Circular VI.

1. Nicholas Le Messurier, harbour master, Guernsey.
 2. The Harbour of ST. PETER PORT, and the Coast of GUERNSEY generally.
 3. The "superviseur de la chaussee" for the harbour light, buoys, and beacons.
 4. They are not.
 5. The buoys and beacons now in position cannot be better placed, and are sufficiently well distinguished. The light on the South Pier Head (harbour light) is defective.
 6. The following additional buoys and beacons have been suggested:—1. A bell buoy on the west side, at the entrance of the Small Russel; 2. A buoy on the Rock Platte Boue, on the east side of the Small Russel; 3. A beacon on the Rock "La Grune," south of St. Martin's Point; 4. A beacon on the rock "Longue Pierre," west of St. Martin's Point, and are now under consideration by the Legislature of the island; also a lighthouse is about to be erected by the Trinity Board on the Hanois Rocks, south-west of Guernsey.
 7. The St. Peter Port Harbour Light (the only one in use) is lighted with gas.
 8. On the 8th September, 1856, the Harbour Light was extinguished for about twenty minutes, for want of water in the meter; no accident occurred in consequence.
 9. None have been displaced within the last few years.
 10. I cannot; but I really believe that many accidents might have been avoided had there been a light on the Hanois Rocks.
 11. No tide signals are used, nor do I think any necessary; our pilots generally know well, by the rocks, the depth of water (if any) at the Pier Heads.
 12. No fog signals are used; the bell buoy stated in answer to query VI., with the numerous beacons along the coast, will, I consider, answer every purpose.
 13. The buoys and beacons now in use are painted, some white, some red, others black; the beacons are all different in their shape, no particular system being adopted; the danger or guiding buoys are conical, and the mooring or warping barrel-shaped.

GUERNSEY and HARTLEPOOL.

Commander F. W. Sidney, commander of the Admiralty Survey in the Channel Islands, gave the following evidence, to which we attach great importance, as it emanates from an officer of considerable experience.

Thinks the Little Russel Channel ought to be lighted as soon as possible, by two leading lights, one placed further out than the present pier light, and the other on the land behind. The new pier light should be masked towards St. Martin and Sardriere shoals.

Commander Sidney recommends that the Sardriere and Les Grunes du Bois shoals be marked, and that a buoy be placed on the Boue Agenor shoals.

He approves of the project of the States to mark with buoys the Plat Boné and the Plat Fougere, and of beacons being placed on the Longue Pierre, and Les Grunes de Jerbourg.

Mr. Burney, Master, R.N., late Master of H.M.S. Dasher, having had very considerable experience in the navigation of the Islands, stated that he entirely agreed in all Commander Sidney's suggestions.

Peter Olivier, commanding the *Caroline* of Guernsey, 49 tons, trading to France and England, agreed with the statements regarding the great want of lights, buoys, and beacons, stated that he thought French lights inferior to the English, and that they were lit much later and extinguished much earlier than the English lights.

Pilots George Hughes and Richard Whitford, agreed with Commander Sidney's proposed sites for buoys; and the first suggested, in addition, that the Caval shoal should be buoyed.

Admiral Hamilton and Captain Ryder crossed the Island to see the site of the Hanois Lighthouse.

LIGHTHOUSE.—(SPECIAL RETURN.)

- I. Hartlepool Heugh.
- II. Hartlepool Port and Harbour Commissioners.
- III. William Davison, Town Wall, Hartlepool.
- IV. One principal white light, with a red tide light underneath.
- V. February 1845.
- VI. Hartlepool Port and Harbour Commissioners.
- VII. Owing to the prominence of the headland.
- VIII. 1st October 1847.
- IX. Matthew Carter, builder; Stephen Robinson, engineer. Built by contract.
- X. First order, catadioptric; red light.
- XI. Freestone, solid; not coated with color.
- XII. No specific conductor. The interior fittings, from top to bottom, being of iron, act as one.
- XIII. 73 feet 7 inches.
- XIV. Eighty-four feet.
- XV. Ten and a half miles.
- XVI. About 15½ miles.
- XVII. Two hundred and fifty-two degrees. N. ¼ W. round eastward to W.S.W.
- XVIII. Fixed white light.
- XIX. Stationary.
- XX. Sunset to sunrise.
- XXI. Catadioptric.
- XXII. First order, with one burner.
- XXIII. No alteration, and none suggested.
- XXIV. Glass obtained of Messrs. Swinburn, of Newcastle, but the apparatus was constructed, under the direction of the engineer, at Hartlepool.
- XXV. Simply by six tubes leading from the exterior to the interior of the tower.

BUOYS AND BEACONS.

Circular V.

- I. Hartlepool Port and Harbour Commissioners.
- II. See accompanying chart and plan.
- III. Not responsible to any superior authority.
- IV. None.
- V. See plan and sketches accompanying this return.
 - a. Some are plate iron, and some are wood or pipe staves.
 - b—f. See marginal notes referring to the sketch in the accompanying plan.
 - g. At the storeyard in the harbour.
 - h. See marginal notes in plan.
 - i. Four of the plain class.
 - j. By vessels fouling them when entering or leaving the harbour.
 - k. With chain and sinker.
 - l. See marginal notes in plan.
 - m. Not by open tender.
 - n. By its peculiar form, combined with other distinguishing features, colour, &c. See accompanying plan.
 - o. Nine in number.
- VI. A buoy of an egg form, similar to that shown by the accompanying sketch.

HARTLE-
POOL.
Circular V.

HARTLEPOOL and HAYLE.

- VII. No fixed periods, but at all times when repairs or cleaning are required.
- VIII. Surveyed fortnightly, and invariably after storms from the sea.
- IX. See sketch in accompanying plan. Similar rules apply to this beacon as previously mentioned with respect to buoys.
- X. One only, as per sketch.
- a. No particular name.
 - b. First erected in the year 1845.
 - c. For marking the western point of the rocks on the north shore of the bay.
 - d. Surmounted by an iron wicker ball and vane. See sketch.
 - e. Wooden stalk, with iron stays and braces, the stalk copped up to about 10 feet above low water.
 - f. Black.
 - g. Not lighted.
 - h. Vane 21 feet above high-water spring tides.
 - i. First cost of erection 50*l*.
 - j. Nothing within the periods mentioned.
 - k. No income derived from it.

XI. Those shown on the accompanying plan are the most approved at the port of Hartlepool, and iron is invariably substituted for wood as the old material becomes unserviceable.

XII. Black buoys on the starboard and white buoys on the port hand entering the channel. Middle grounds should all be marked by buoys chequered and striped.

XIII. All beacons should be black if situated in the water.

XIV. From the general port fund.

XV. From the general port fund.

XVI. No special income derived for this purpose.

XVII. No applications made.

XVIII. None made.

XIX. By the haven master. Dates cannot be furnished.

XX. Same as preceding.

XXI. Through the medium of "The Shipping and Mercantile Gazette."

XXII. The haven master.

XXIII. All the objects in question are daily under the eye of the haven master.

XXIV. None have been made in either case.

XXV. The buoy of the egg-shape (balanced by the water), as represented by the sketch in the accompanying plan, has been substituted for one similar to that represented by the sketch with the staff and ball, and the advantages are found to be the following : By its floating vertically it is seen at a much greater distance ; it rides much easier, has much less motion, and thereby does away with a considerable quantity of friction or waste, which invariably takes place in the chain where the light works upon the bottom, thus rendering a considerable saving in the cost of the moorings.

XXVI. No rules nor regulations are issued.

XXVII. No remarks to make of a general nature, except that the mooring buoys within the limits of the Commissioners harbour are not included in this return. This is under the supposition that such is not required.

LLOYD'S EVIDENCE.

- I. Jos. Mellanley, L.A., West Hartlepool.
- II. HARTLEPOOL and DISTRICT.
- III. Master and assistants appointed by Sunderland.
- VII. Lighted by gas.
- XV. Paid by vessels sailing out of harbour.

32. HAYLE.*

33. HULL.

LIGHTHOUSES.—(GENERAL RETURN.)

- I. The Master, Wardens, and Assistants of the Guild, Fraternity, or Brotherhood of the most Glorious and Undivided Trinity, and of St. Clement, in the parish of Deptford Strond, in the county of Kent, commonly called the Corporation of the Trinity House of Deptford Strond.
- II. Killingholme high lighthouse; Killingholme south low lighthouse; Killingholme north low lighthouse; Paull lighthouse; Stallingborough light.
- III. The selection of positions in which the lighthouses and the lights exhibited therein may serve as leading marks by night and day, and so facilitate the navigation of the River Humber.
- IV. In the Humber, 80 feet.
- V. Catoptric.
- VI. To obtain a good illuminating power for lighthouses of this class.
- VII. Fixed.
- VIII. That a fixed bright light is best suited for a leading mark, and that colour is introduced when the actual bearing of the light is required to be known to mark any particular danger. Thus the three lights at Killingholme are fixed bright lights. Stallingborough is a fixed bright light. Paull shows a fixed bright light until abreast of the Skitter Sand End Buoy, when the light appears red, to show the necessity for altering the course of the vessel.
- IX. Drawing herewith, marked A.
- X. Sent herewith, marked B.
- XI. Oil is supplied by contract, tested by the buoy master and approved of by the Buoyage and Beaconage Committee, and care is taken that all stores supplied are of good quality.
- XII., XIII. Not considered necessary.
- XIV. None.
- XV. No separate account in respect of "lighthouses" is kept. The lighthouses are all maintained out of the old buoyage and beaconage dues; the increased income from which, owing to the increase of trade, has enabled the Corporation to maintain these lighthouses without any additional charge on shipping.
- XVI. It is presumed that by the term "General Authority" here used, "Local Authority" is meant. Suggested improvements are submitted to the whole Board of the Corporation, who, if thought requisite, refer the subject to the Committee, who obtain such scientific assistance as they may think fit.
- XVII. Here again the term "General Authority" is supposed to mean "Local Authority." The only application made since 1st October 1853 was one on the 16th May 1859, which was complied with.
- XVIII. The inspection and management of the lighthouses is vested in the Committee. The lightkeepers are required to transmit returns monthly, stating the quantity of oil consumed and the particulars of stores received and expended, and also to observe the general rules and regulations specified in the annexed Form, marked C.
- XIX. The three lighthouses at Killingholme are included in one special return, being connected as leading marks for the river.

KILLINGHOLME.

The High and South Low Lights are a leading mark for the mid channel below Killingholme, and to keep vessels clear of the sands or shoals on each side of the river, between Killingholme and Spurn.

The High and North Low Lights are a leading mark for the channel above Killingholme, and to keep vessels clear of the sands and shoals between Killingholme and Paull.

PAULL.

A fixed bright light is seen in this lighthouse between Killingholme and Paull, or until abreast of the Skitter Sand End Buoy, which bears from the lighthouse S. W. by W. $\frac{1}{2}$ W., when the light suddenly changes to a fixed red light, and continues so until the length of the elbow buoy, when it again changes to a fixed bright light, and continues so up to Hull Roads.

HULL
Circular

Circular VI.

HULL.

STALINGBOROUGH.

This light is seen in coming up the Humber about mid-way up the Bureum, and exhibits the brightest light when bearing W. S. W., when good anchorage may be found for large ships below the Holm Ridge, or in the Sunk Upper Roads. In proceeding further up the river the light disappears altogether when the length of the Holm buoy.

} Lights at Kingholme.

} Light at Hull.

} Light at Stalingborough.

On the 2d of August, 1859, the Commissioners obtained the following information from the Secretary to the Corporation at Hull:—

The corporation is very ancient. Any master of a merchant ship who trades or has traded out of Hull, or any port within the limits of the jurisdiction of the Trinity House at Hull, may become a YOUNGER BROTHER on passing an examination. The number of Younger Brethren is unlimited. The examination is passed before the governing body, which consists of TWELVE ELDER BROTHERS and SIX ASSISTANTS, in all 18. The whole body choose annually two STEWARDS from amongst the Younger Brethren. Their duty is to audit the accounts. When a vacancy occurs amongst the Elder Brethren the whole body choose from amongst the past stewards one to be assistant, and the remaining Elder Brethren choose from the assistants one who becomes an elder brother. They choose by a majority of votes; but practically the choice goes by rotation.

The whole body choose annually, on the 1st of September, two WARDENS from amongst the Elder Brethren. An elder brother receives from 90*l.* to 100*l.* a year, an assistant about 45*l.*, say 1,400*l.* or 1,500*l.* in all. The receipts of the wardens and stewards were not stated. There is a staff of clerks, and there are other office bearers.

The duties of the corporation are,—the care and management of the lights, buoys, and beacons within their jurisdiction.

From the testimony of all persons who were questioned on the subject, these duties appear to be efficiently performed; and from a personal inspection of the lights, &c. in the Humber, the Commissioners find no reason to think otherwise, though in the several particulars mentioned below they thought the lights inferior to others under other jurisdictions. No complaints of the lights, buoys, or beacons in the Humber were made to the Commissioners.

The corporation support a naval school, to which any seaman's son is eligible. It was visited and found to be remarkably well conducted.

They also support extensive charities. There are 334 pensioners, who live in 11 almshouses or hospitals. These are wives and widows of masters of merchant ships, who have served 60 months out of ports within the jurisdiction, and decayed masters who have served during a like period.

The lights, buoys, and beacons are all maintained out of buoyage dues, as stated below.

HULL.

The school and charities are supported from the income of estates, and from primage dues levied on shipping.

On the 3d of August, on leaving the Humber, the Commissioners agreed, that the lights under the Trinity House of Hull appear to give satisfaction to those who use them. They were seen from the points where they were required on a fine night; and those which were inspected were found to be well kept by the men entrusted with them. But though the lights may be considered generally sufficient for their purpose, and the houses and vessels amply so, still the illuminating apparatus is inferior to that used by the General Lighthouse Boards, and, in one instance, is decidedly bad in principle.

The apparatus, as stated by the authorities, is generally manufactured in Hull; there is no open tender. After visiting French shore lights of the same class, the Commissioners are of opinion that they are superior to the Humber lights. The new pier light at Berwick-upon-Tweed is also far superior.

 LVIII. See Rules and Regulations annexed.

HULL.

On the evening of the 1st of August it was remarked that the two lighthouses coloured white were more clearly seen against the land than the third contiguous lighthouse coloured red; and that a light vessel coloured red, and seen against the sea, was very distinctly seen shortly before. The lights were observed from the "Vivid" on the night of the 3rd of August. They were burning well; they were brilliant as seen from certain positions, but, like other reflector lights, were less bright when seen from other positions. They appeared to be well placed for showing the channel, and were seen from a considerable distance. They were considered to be fit for their position, at least, in fine weather. These lights stand 85, 86, and 87 on the list of lights visited or seen alight.

PAULL LIGHTHOUSE.—(SPECIAL RETURN.)

- I. Paull Lighthouse, on the River Humber.
- II. The Master, Wardens, and Assistants of the Guild, Fraternity, or Brotherhood of the most Glorious and Undivided Trinity and of St. Clement, in the parish of Deptford Strond, in the county of Kent, commonly called the Corporation of the Trinity House of Deptford Strond.
- III. The Guild or Brotherhood of Masters and Pilots Seamen of the Trinity House in Kingston-upon-Hull.
- IV. One lantern showing two lights.
- V., VI. Suggested by the Buoyage and Beaconage Committee of the Trinity House of Hull in the year 1835.
- VII. As a leading mark to clear the Holm Sand and Skitter Sand.
- VIII. 30th December 1836.
- IX. Builder, W. H. Hearfield; surveyor, Fras. Dales. Built by contract.
- X. River lights.
- XI. Brick; solid; coated with cement, and painted red.
- XII. Not fitted with lightning conductor.
- XIII. Forty feet.
- XIV. Thirty-four feet.
- XV., XVI. Five miles is about the distance the light may be seen in a direct line on the river.
- XVII. One hundred and eighty degrees, S. $\frac{1}{4}$ W. to N. $\frac{1}{4}$ E.
- XVIII., XIX. This is a bright fixed light up to the Skitter Sand End buoy, No. 7, when it shows a red light, and continues so up to the Elbow Buoy, No. 8, when it again shows a bright light.
- XX. Sunset to sunrise.
- XXI. Catoptric.
- XXII. Three lamps, with one burner to each.
- XXIII. This was originally a bright light, but to improve the navigation the red light was added, 1st March 1852, at the suggestion of the Buoyage and Beaconage Committee.
- XXIV. Thomas Purdon.
- XXV. From gratings under the gallery and through the dome.
- XXVI. No fog signals used.
- XXVII. No fog signals used.
- XXVIII. No register of fogs kept.
- XXIX. First cost of building, 262*l.* 15*s.* 4*d.*; ground, 62*l.* 2*s.*
- XXX. Finished.
- XXXI. Inside diameter 8 feet 6 inches; cost of lantern was about 200*l.*
- XXXII. Was not purchased.
- XXXIII. The average annual cost of repairs and alterations for five years ending September 1858 is 8*l.* 11*s.* 5*d.*
- XXXIV. The cost of painting or colouring is included in the average annual cost of repairs and alterations of buildings just given, and coated once in two years.
- XXXV. One lightkeeper, salary 55*l.* per annum, and allowance of coals and oil.
- XXXVI. The entire cost was 85*l.* 3*s.* 3*d.*, including tinnors' ware.
- XXXVII. For the year ending September 1857, exclusive of carriage, 6*l.* 3*s.* 9*d.*. For the year ending September 1858, exclusive of carriage, 4*l.* 15*s.* 6*d.*
- XXXVIII. Three hundred gallons of oil and 37 dozen wicks.
- XXXIX. Refined pale rape oil, the price of which, in 1857, was from 4*s.* to 4*s.* 2½*d.* per gallon, and in 1858 the price was 3*s.* 6*d.* per gallon.
- XL. French lamp wicks, made of cotton, price 6*d.* per dozen; cost for 1857 and 1858, 18*s.* 6*d.*
- XLI. Not used.

HULL.

XLII. From the buoyage and beaconage dues, levied on ships and vessels passing or having the benefit of any of the floating and shore lights, buoys and beacons, and the dues are payable at the office of the Trinity House in Hull.

XLIII., XLIV. No separate account in respect of "light-houses" is kept. The lighthouses are all maintained out of the old buoyage and beaconage dues, the increased income from which, owing to the increase of trade, has enabled the corporation to maintain this light without any additional charge on shipping.

XLVI. None.

XLVII. None.

XLVIII. None.

XLIX. None.

L. The Buoyage and Beaconage Committee.

LI. Not less than four times a year, and as much oftener as circumstances require.

LII. No.

LIII. Three spare lamps. The oil is kept in a room under the lantern.

LIV. None.

LV. Not used; not considered necessary.

LVI. None; not considered requisite.

LVII. The keeper with his family resides at the lighthouse, and is not relieved.

LVIII. See Rules and Regulations annexed.

RULES AND REGULATIONS OF THE KEEPERS OF THE LIGHTHOUSES.

The lightkeeper is required to obey and observe all such orders, rules, and directions as he may receive from the corporation, or from the committee for the management of the buoyage and beaconage of the Humber relating to the care and management of the lighthouse, and the regulation and exhibition of lights and signals therefrom, or otherwise concerning the buoyage and beaconage service.

He is also required to keep the lanterns of the lighthouses, and the lamps, reflectors, machinery, windows, and every part of the apparatus necessary for properly exhibiting the lights, in a perfectly clean state and condition.

He is also expressly prohibited from permitting the lights to be meddled or interfered with, managed, or regulated by any person other than himself.

He is also required to exhibit, watch, and regulate the lights for such and so many hours or periods of time on each and every night throughout the year as the corporation, or their buoyage committee, shall direct, and in all other respects to use his utmost endeavours to carry into complete effect the object and intention of the corporation in establishing and maintaining the lighthouse, by regular exhibition of such lights by night and signals by day, in order that the shipping frequenting the river may receive and enjoy every possible advantage therefrom, and so that no interruption in the exhibition thereof may at any time take place.

The lightkeeper is also required constantly to reside at the lighthouse (except for such periods of time as shall be allowed by the corporation or by the buoyage committee), and not to suffer any person other than himself and the members of his own family to reside in the lighthouse.

The lightkeeper is required, on his appointment, to enter into a bond containing the above conditions, and with a stipulation not to quit the charge and care of the lighthouse without receiving a notice for that purpose from the corporation, or without giving to the corporation one calendar month's previous notice in writing of his intention to quit; and further, that on quitting the charge or care of the lighthouse he will deliver up the same in a tenable and orderly condition, together with the lamps, oil, furniture, and apparatus, and all registers, journals, books, accounts, documents, and writings, goods, chattels, and effects belonging to the corporation, which may be in and about the lighthouse, or which may have been entrusted to his care or custody.

This establishment was visited from the "Vivid" Observations by Commissioners. at 9-30 p.m. on the night of August 2nd 1859. The building is coloured red, and has a very comfortable dwelling house attached. The light was burning and very well kept; the spare lamps trimmed and ready. The three reflectors are small; they were clean, but scratched. The red is produced by a red glass in front of one reflector; the others show a white light in different directions. The keeper is an old sailor, and seemed to take a great pride in his work. He is married and has eleven children. His

HULL.

HULL.

HULL

HULL

orders are,—to light at sunset and extinguish at sunrise by the almanack. The light was also observed from the "Vivid." It was not powerful, but seemed sufficient for its purpose, at least, in fine weather; it stands 84 on the list of lights visited or seen afloat.

has much increased since the introduction of steam vessels.

The spare lightship. The lantern of this lightship can be readily adapted to either a red or white light.

Circular II. HEBBLES AND BULL FLOATING LIGHTS.—
(GENERAL RETURN.)

- I. The Master, Wardens, and Assistants of the Guild, Fraternity, or Brotherhood of the most Glorious and Undivided Trinity, and of St. Clement, in the parish of Deptford Strond, in the county of Kent, commonly called the Corporation of the Trinity House of Deptford Strond.
- II. "This authority" is presumed to mean the local authority of the Trinity House of Hull. Bull Sand floating lightship; Hebbles Sand lightship, and lightship.
- III. The selection of positions in which the lightships and the lights exhibited therein may serve as marks to clear the sands (near which they are placed) by night as well as by day.
- IV. One, moored in the Victoria Dock. Crew supplied from the lightship requiring to be replaced, or in an emergency from the crew of the buoy yacht. The spare lightship is fully equipped with stores.
- V. The Bull and the Hebbles Floating lightvessels are so far apart that one cannot be mistaken for the other, but the former is capable of being distinguished from the latter, and from other vessels, by day as being marked in large white letters on each side, "Bull," the latter in the same manner, "Hebbles," and both are painted red, with a red ball at the masthead. At night the "Bull" exhibits a bright white light, and "Hebbles" a bright red light.
- VI. Yes; in their brightness and magnitude.
- VII. Catoptric.
- VIII. To obtain a sufficient illuminating power for the distance within which the lights are useful.
- IX. Fixed.
- X. To prevent the possibility of their being mistaken for other lights, and as the Newsand Floating Light is revolving, it was thought that a fixed bright light was best suited for the Bull, and colour was introduced into the Hebbles in order to distinguish it from the light at Paull, and from ships' lights.
- XI. See table annexed marked A.
- XII. See drawing annexed, marked B.
- XIII. To obtain sufficient sound to warn vessels from approaching too near the sands or the lightships.
- XIV. Tide signals not used.
- XV. None.
- XVI. No separate account of income in respect of lightships is kept. The floating lightships are maintained out of the old buoyage and beaconage dues, the increased income from which, owing to the increase of trade, has enabled the corporation to establish and maintain these lightships without any additional charge on shipping.
- XVII. It is presumed by the term "general authority," here used, that local authority is meant. Suggested improvements are submitted to the whole Board of the Corporation, who, if it be thought necessary, refer the subject to the Buoyage and Beaconage Committee, who obtain such scientific assistance as they may think fit.
- XVIII. The inspection and management of the lightships is vested in the committee. The masters of the lightships are required to transmit returns monthly, stating the quantity of oil consumed, and particulars of stores received and expended, and also to observe the general rules and regulations specified in the annexed form, marked C.
- XIX. Here again the term "general authority" is supposed to mean local authority. No application has been made since 1853.
- XX. The Bull lightship is not only a mark for the Bull Sand, but serves as a guide to clear the Inner Binks, and on entering or leaving the Humber when the Killingholme lights cannot be seen. The Hebbles lightship is not only a mark for the Hebbles Sand, but serves as a guide to clear the Skitter and other sands on the south side of the Humber, between Hull and Paull, and is indispensable to the safe navigation of this channel in the night time, and the necessity of navigating it during the night

HEBBLES FLOATING LIGHT.—(SPECIAL RETURN.)

- I. Hebbles Lightship, moored in the Hebbles Channel, in the River Humber.
- II. About 3 fathoms. Bottom, silt; tide, 4 to 5 knots.
- III. See General Return.
- IV. The Guild or Brotherhood of Masters and Pilots Seamen of the Trinity House, in Kingston-upon-Hull.
- V. No written application was made by the trade, but the lightship was placed on this station at the recommendation of the Buoyage and Beaconage Committee, in order to facilitate the navigation of the Humber by night.
- VI. To serve as a mark to clear the Hebbles and other sands between Hull and Paull.
- VII. Since 26th December 1839.
- VIII. Only one light exhibited.
- IX. Length, 50 feet; breadth, 14½ feet; depth, 9½ feet.
- X. Wood.
- XI. Fifty tons.
- XII. At Hull, by Edward Gibson and Son.
- XIII. 6 feet aft; 5 feet forward.
- XIV. Red.
- XV. Marked "Hebbles" in large white letters on each side, and a red ball at the masthead.
- XVI. One mast, foresail and mainsail.
- XVII. Not fitted with lightning conductors.
- XVIII. Single moorings; two spare anchors and chain cables on board.
- XIX. Mushroom anchor, about 20 cwt., with 15 fathoms ¼ inch ground chain, to which is attached 90 fathoms 1 inch chain. The two spare anchors are 6 cwt. each, and the cables each 90 fathoms of ¾ inch chain.
- XX. Todd and Campbell, of Hull, made the mushroom anchor. The chains were purchased of Thos. Clark, of Hull.
- XXI. Twenty feet.
- XXII. About five miles.
- XXIII. About six miles.
- XXIV., XXV. A fixed red light.
- XXVI. Sunset to sunrise.
- XXVII. Catoptric.
- XXVIII. Eight burners.
- XXIX. A new lantern, with lamps in gimbals, was purchased in September 1846, at the suggestion of the Buoyage and Beaconage Committee.
- XXX. Wm. Wilkins, London.
- XXXI. The lantern is suspended by a chain round the mast, and the lamps are fixed round the lantern.
- XXXII. Bell.
- XXXIII. Fifty days.
- XXXIV. No meteorological register is kept.
- XXXV. 1,096*l.* 8*s.* 6*d.*
- XXXVI. 1,356*l.* 1*s.* 8*d.*
- XXXVII. Ordinary expenditure, 32*l.* 8*s.* 3*d.* Extraordinary ditto, 1*l.* Not by contract.
- XXXVIII. Six, including the master.
- XXXIX. Master, 4*l.* 15*s.*; mate, 3*l.* 12*s.* 6*d.*; seamen, 3*l.* per month.
- XL. For the year ending September 1858, 187*l.* 10*s.*, exclusive of coals, water, and medical attendance.
- XLI. See answer to last question.
- XLII. About 75*l.*
- XLIII. First lantern, 212*l.* Second ditto, with gimbals, 343*l.* 5*s.* 2*d.*
- XLIV. 1857, 4*l.* 12*s.* 10. 1858, 6*l.* 4*s.* 2*d.*
- XLV. 1857, oil, 200 gallons. 1858, oil, 207 gallons. 1857, wicks, 50 dozen. 1858, wicks, 49 dozen.
- XLVI. Refined pale rape. The price, in 1857, was from 4*s.* to 4*s.* 2½*d.* per gallon; and in 1858, the price was 3*s.* 6*d.* per gallon. The annual cost in 1857, 38*l.* 6*s.* 8*d.*; 1858, 39*l.* 13*s.* 6*d.*
- XLVII. French lamp wicks, made of cotton, price 6*d.* per dozen. 1857, cost 1*l.* 5*s.*; 1858, cost 1*l.* 4*s.* 6*d.*
- XLVIII. About 7*l.*
- XLIX. From the buoyage and beaconage dues levied on ships and vessels passing or having the benefit of any of the floating or shore lights, buoys and beacons, and the dues are payable at the office of the Trinity House, in Hull.
- L., LI. No separate account in respect of lightships is kept. The lightships are all maintained out of the old

HULL.

buoyage and beaconage dues, the increased revenue, from which, owing to the increase of trade, has enabled the corporation to maintain the light without any additional charge on shipping.

- LII. None.
LIII. None.
LIV. None.
LV. None.
LVI. None.
LVII. None.

LVIII., LIX. By the Buoyage and Beaconage Committee. Not less than four times a year, and as much oftener as circumstances required. The lightship was also frequently visited by the buoy master.

LX. No.

LXI. 1853, December 25, the chain broke in a gale of wind at W.N.W.; off the station 6 hours during the day only. 1855, February 18, taken from the station to Hull, on account of the large and unusual quantity of heavy ice in the river, and returned to her station 2nd March; her place being temporarily supplied by a large ice buoy.

LXII. None.

LXIII. She has a boat with life buoy and 60 fathoms line attached, ready for immediate use.

LXIV. Being in sight of Hull not required by day, rockets and blue lights used by night.

LXV. Not used; not considered necessary.

LXVI. The crew is relieved once a month, two being on shore during the winter months, and three during the summer months; the master three weeks per quarter. The men when on shore are employed in the day time at the buoy yacht, buoy shed, and on general business connected with the buoyage and beaconage department.

LXVII. A buoy yacht is kept for this and general purposes connected with the buoyage and beaconage department.

LXVIII. Yes, in the Victoria Dock at Hull, ready to replace the other in three or four hours.

LXIX. The person in charge of the lightship is required to transmit a return monthly, stating the quantity of oil consumed, and particulars of stores received and expended, and also to observe the general rules and regulations specified in the annexed form marked C.

This vessel was boarded from the "Vivid" at 10 minutes past 9 p.m., on the 2d of August. It stands No. 83 on the list of lights visited or seen alight. The lamps were in process of lighting, and it appeared to the Commission that it was decidedly too late. There are eight reflectors hung on gimbals. They were clean but scratched, as is usual in floating lights. The red colour is produced by covers of red glass placed in front of the reflectors. The light is said to be visible at a distance of five miles.

The crew consists of a master and mate and four men, three of whom are afloat and three on shore. The master stated that he had been 40 years at sea, and had crossed the Atlantic 60 times, and that he "had never seen such a nasty sea as on this station." It is short and cross. It was breaking right over him on Sunday and on Monday also. The vessel is 50 feet long; he considers her to be perhaps 30 too short. The vessel was clean and in good order. No meteorological instruments are kept. A log is kept. The master's rule for lighting is when he loses sight of the buoys; there are no printed regulations on board. The statement relative to the sea may be contrasted with that of the master of the Seven Stones floating light moored off Scilly, and that of the master of the Spurn, moved outside the Humber. The light was afterwards seen from the Paull light. It was very dim. On leaving Paull light it was again observed and compared with the ordinary town lights at Hull. The gas lamps were distant about five miles, and were more clearly seen than the Hebbles light distant about three. It is inferior to other floating lights which have been seen, but it is probably sufficient for its purpose.

BULL FLOATING LIGHT.—(SPECIAL RETURN.)

I. Bull lightship; moored on the east side of the bull sand in the River Humber.

HULL.

II. In 5½ fathoms. Bottom, silt. Tide, about 4 knots.

III. See General Return.

IV. The Guild or Brotherhood of Masters and Pilots Seamen of the Trinity House in Kingston-upon-Hull.

V. 4 February, 1830. The Shipowners' Society forwarded a requisition to this corporation, signed by several ship masters belonging to the port.

VI. To serve as a mark to clear the Bull Sand.

VII. Since 1832.

VIII. Only one light exhibited.

IX. Length of keel for tonnage, 74 feet. Breadth, moulded, 18 $\frac{6}{12}$. Breadth, extreme, 18 $\frac{11}{12}$. Depth in hold, 10 $\frac{6}{12}$.

X. Iron.

XI. 120 $\frac{1}{4}$ tons.

XII. At Hull; by Messrs. Gibsons, Clifford, and Brown.

XIII. 8 feet aft, 7 feet forward.

XIV. Red.

XV. Marked "Bull" in large white letters on each side, and a red ball at the masthead.

XVI. One mast, foresail and mainsail.

XVII. Not fitted with lightning conductor.

XVIII. Single moorings; two spare anchors and chain cables on board.

XIX. Mushroom anchor, 30 cwt., with 20 fathoms, 1½ inch ground chain, to which is attached 90 fathoms, 1½ inch chain. The two spare anchors weigh about 12 and 10 cwt., and the cables are each 90 fathoms 1 inch chain.

XX. Thompson and Stather, Hull, made the last mushroom anchor, and Abbott and Co., of Newcastle, the china.

XXI. Twenty-five feet.

XXII. About 6 miles.

XXIII. About 7 miles.

XXIV., XXV. A fixed white light.

XXVI. Sunset to sunrise.

XXVII. Catoptric.

XXVIII. Eight burners.

XXIX. None.

XXX. W. and I. Walker, Hull.

XXXI. The lantern is suspended by a chain round the mast, and the lamps are fixed round the lantern.

XXXII. Bell.

XXXIII. Six days are recorded in the log book, but the master states that the bell was frequently used for a short period only on other days.

XXXIV. No meteorological register is kept.

XXXV. 2,888l. 16s.

XXXVI. 3,515l. 18s. 11d.

XXXVII. Ordinary expenditure, 48l. 4s. 1d.; extraordinary expenditure, 7l. 7s. 9d. Not by contract.

XXXVIII. Eight, including the master.

XXXIX. Master 5l. per month; mate 4l. per month; seamen 3l. per month.

XL. For the year ending September 1853, 251l. 7s. 6d., exclusive of coals, water, and medical attendance.

XLI. See answer to last question.

XLII. The last mushroom anchor and chain cost 81l. 14s. 3d. XLIII. 212l.

XLIV. For the year ending September 1857, 2l. 6s. 3d.; for the year ending September 1858, 11s. 3d.

XLV. Oil, 214 gallons in 1857; 211 $\frac{3}{4}$ gallons in 1858. Wicks, 80 dozen in 1857; 84 dozen in 1858.

XLVI. Refined pale rape, the price of which in 1857 was from 4s. to 4s. 2½d. per gallon, and in 1858, 3s. 6d. per gallon. The annual cost in 1857, 43l. 13s. 10d.; in 1858, 37l. 16s.

XLVII. French lamp wicks, made of cotton, per dozen; cost for 1857, 40s.; 1858, 42s.

XLVIII. About 9l.

XLIX. From the buoyage and beaconage dues levied on ships and vessels passing or having the benefit of any of the floating or shore lights, buoys, and beacons, and the dues are payable at the office of the Trinity House in Hull.

L., LI. No separate account in respect of lightships is kept. The lightships are all maintained out of the old buoyage and beaconage dues, the increased revenue from which, owing to the increase of trade, has enabled the corporation to maintain this light without any additional charge on shipping.

LX. No.

LXI. 1856, February 8, fouled by a vessel; off the station 7 hours during the day only. 1858, March 6, the chain cable broke in a gale of wind at N.W.; off the station 6 hours during the day only.

LXII. None.

LXIII. The lightship has a boat, and also a life buoy, with 60 fathoms of line attached, always ready for use. A life boat, with a crew of 11 men, is stationed at Spurn Point, under the control and management of this Corporation.

LXIV. Watson's telegraph code of signals is used by day, and rockets and blue lights by night.

LXV. Not used, not considered necessary.

LXVI. The crew is relieved once a month, three being on shore at a time during the winter months, and four during the summer months; the master three weeks per quarter. The men when on shore are employed in the day time at the buoy yacht, buoy shed, and on general business connected with the buoyage and beaconage department.

LXVII. A buoy yacht is kept for this and general purposes connected with the buoyage and beaconage department.

LXVIII. Yes, in the Victoria Dock at Hull, ready to replace the other in three or four hours.

LXIX. The person in charge of the lightship is required to transmit a return monthly, stating the quantity of oil consumed, and particulars of stores received and expended, and also to observe the general rules and regulations specified in the annexed form marked C.

RULES and REGULATIONS for MASTERS of FLOATING LIGHTVESSELS.

The master is required to maintain proper obedience in the crew appointed or placed under his care to all his reasonable orders and commands, and to keep and observe such directions as he may from time to time receive from the Corporation of the Trinity House of Hull, or from their Buoyage and Beaconage Committee for the time being, to be signified to him by such committee or by the clerk to the wardens for the time being of the said Corporation. He is also required to keep a constant and regular exhibition of such lanterns and lights by night, and signals by day, as he shall from time to time be ordered and directed to exhibit by the said Corporation, or their said committee, in order that the shipping frequenting the river may receive and enjoy every possible advantage therefrom. He is also required to remain and reside on board the lightvessel at all times (except for such periods of time as shall be allowed him by the said Corporation or their said committee to be signified by writing, under the hand of the said warden's clerk), and to keep the vessel in a clean and orderly state and condition, together with all her boats, stores, and appurtenances, and particularly the lanterns, lights, and signals, with the several apparatus, matters, and things belonging thereto, so that no delay or interruption in the exhibition thereof may take place.

The master is required on his appointment to enter into a bond containing the above conditions, and with a stipulation not to quit the charge or command of the vessel without receiving a month's notice for that purpose from the corporation or without giving to the corporation one month's previous notice in writing of his intention to quit, and further that, on quitting the charge or command of the vessel, he will deliver up the same with her boats, ropes, stores, tackle, and apparatus, and account for all such as shall or may have been necessarily worn out or consumed or unavailably lost, and also deliver up all registers, journals, books, accounts, documents, and writings whatsoever which may have been entrusted to his care or custody, or which may then be in his possession, or which he can come by.

HULL.

HULL.

HULL.

Circular

"thinks his vessel would ride still better if she were longer." The vessel was well kept.

There are four reflectors with two lamps in each, fixed, not hung on gimbals, as in Trinity lightvessels, and in the Hebbles. These were very well cleaned, and but little scratched; but they appeared to be very ill contrived for making the most of the light produced by lamps of a very inferior construction.

"When the vessel rolls the oil is thrown out of the lamps," and, the oil cistern being in front of the reflectors, it is impossible that half the small amount of light produced can be used. Several persons had mentioned this as the worst light in the Humber. Others had praised it as a good light. It may be sufficient for its purpose, but the illuminating apparatus was certainly the worst that had been seen, and is entirely out of keeping with the vessel, which seemed to be good. She is of iron, and lined with wood only in the master's cabin. Like other iron floating lightvessels, she is very cold in winter, very hot in summer, and sweats in particular states of the atmosphere.

The master victuals the crew, and has 1s. 9d. per day for the purpose. He has 20l. from the telegraph company for working the semaphore on board. There are no spare reflectors as in other floating lights. No meteorological instruments. The master has a clock of his own. There is a medicine chest, and there are printed regulations on board. The Trinity House (of Hull) visit, perhaps, once a year.

BUOYS AND BEACONS.

Circular

- I. The Guild or Brotherhood of Masters and Pilots Seamen of the Trinity House in Kingston-upon-Hull.
- II. This corporation's jurisdiction above Hull is not mapped out, but an Admiralty chart of the Humber, showing the positions of all the buoys, beacons, floating and shore lights, from Hull to the sea, accompanies this return. The cost of maintaining the buoys and beacons is included in the general expenditure connected with buoys, beacons, floating and shore lights, and no separate account for their maintenance and of the income derived from each can be stated. The number of buoys belonging to the establishment is 62, besides nine ice buoys occasionally used in the winter season. There are four beacons also belonging to the establishment.
- III. No, except as appears by the thirty-ninth section of the Merchant Shipping Act, 1859.
- IV. None.
- V. See diagram of each class herewith, marked D.
 - a. Nun buoys, made both of fir and oak. Can buoys made of oak. Nun wreck made of oak and iron
 - b. Fir nun buoys from 24l. to 26l. Oak nun buoys from 30l. to 32l. Oak can buoys from 25l. to Iron wreck buoys from 25l. to 30l.
 - c. About 1l. 5s. per buoy.
 - d. Cannot be stated, as much of the work is done by the crews of the light ships.
 - e. Seventeen nun buoys, 11 can buoys, and two wreck buoys (nun)

Observations by Commissioners.

This vessel was boarded from the "Vivid" on the 3d of August, at 6:30 a.m., and stands 89 on the list of lights visited or seen afloat. She is of iron, 83 feet long, and the master says, "she rides very easily." He has been on the Hebbles station, and "thinks this easier to ride in. It is a better vessel and a better station, though more exposed. The master has been on the river for 52 years, and

HULL.

- f. Duplicates of the buoys in position are kept in reserve, and 32 buoys are at present in the shed, four of which are to be used for buoying wrecks if necessary.

(This corporation's proportion.)

k. There is no separate charge for beacons. They are maintained out of the general fund.

XI. The nun buoys are preferred to the can buoys, and are gradually replacing them as they are worn out. No improvement has been suggested in the beacons.

XII. The buoys are laid down for the purpose of marking the sands and dangers in the river. The buoys are all black on the starboard side coming up the river, and red with white ribbon on the port side. When a new danger shows itself the Buoyage Committee immediately survey it, and recommend to the whole board what in their opinion is the best means of warning navigators of such danger.

XIII. If the beacon is required for a leading mark the locality is surveyed by the Buoyage Committee, and the best site selected. If to distinguish coast, then a form of beacon readily distinguishable from others in the vicinity is determined upon and constructed.

XIV., XV. From the buoyage and beaconage dues levied on ships and vessels passing or having the benefit of any of the floating and shore lights, buoys, and beacons, and the dues are paid at the office of the Trinity House in Hull.

XVI. No separate account of income for buoys and beacons is kept, but the following is the total income and expenditure for the particular periods required as

HULL.

regards not only buoys and beacons but also floating and shore lights.

Income for the quarter ending June 1852	£667	6	3
do. do. do. June 1858	845	4	9
do. year do. Sept. 1852	3,916	8	3
Disbursements, year ending Sept. 1852	3,934	7	7
do. do. Sept. 1858	5,526	8	1

XVII. The Humber Conservancy Commissioners applied for a new buoy to be placed at the end of the old landing jetty at Hessele, and on the 15th May 1858 the application was complied with. No other application has been made, and the endeavours of the Buoyage Committee are always to anticipate such applications.

XVIII. The Trinity House of Deptford Strond concurred in an additional buoy being placed on the lower middle, 1st August 1855. In no instance have they not complied with or deviated from the original proposal.

XIX. The Buoyage and Beaconage Committee inspected the buoys—

1857.	1858.
April 20.	March 29.
June 9.	June 9.
August 12.	July 14.
September 10.	August 30.
October 6.	

The buoy master, as before stated, made his inspections once a month.

XX. There is a superintendent to each beacon resident near to them. The beacons are also inspected by the committee as occasion requires.

XXI. The buoys when off their station are generally replaced within a few hours, and any change made in the positions of buoys or beacons is forthwith advertised for the general information of mariners.

XXII. The buoy master is always in attendance with instructions to replace immediately any buoy that may be displaced.

XXIII. The pilots appointed by this corporation who are constantly passing up and down the river, have instructions to communicate immediately to the Trinity House.

XXIV. No such complaints or representations have been received.

XXV. No improvement on the nun buoy has been tried by this authority. The most important alteration and improvement in the buoys was the introduction of the nun buoy by the Committee in the year 1842. This description of buoy shows itself in the water better than the can buoy, particularly in a strong tideway.

XXVI. The inspection and management of the buoys and beacons is vested in a committee of the brethren of the Trinity House of Hull, all of whom are or have been mariners. They give such directions to the buoy master as circumstances require. The buoy master is also a mariner, and was for several years a Humber pilot, and he is exclusively employed in this service. No printed forms are in use.

XXVII. All the buoys on the south side of the Humber are coloured red, with a horizontal white stripe, and numbered 1 to 12, commencing with the sand hale buoy, and terminating with the westernmost buoy on the upper middle, opposite the town of Hull. The buoys on the north side are all black, and numbered 1 to 12, commencing with the outer binks buoy, and terminating with the upper hebbles buoy. The buoys on the middle sands or shoals in the lower part of the Humber are all chequered black and white. The hook buoy on the lower middle is painted white, and marked "hook middle."

The secretary informed the Commissioners on the 2d of August that the river above Hull is not buoyed, because the sands and shoals alter almost every spring tide. That this portion of the river is chiefly used by coasters, which are towed up; that dues are levied on all vessels going up to Goole and Gainsborough, but that no complaints are made by the owners of vessels. These statements were confirmed by the witnesses examined by the commission.

HULL.

HULL—IPSWICH—JERSEY.

Observations
by Commis-
sioners.

The buoy yard was examined. A spare buoy was found ready to replace every buoy on the station, painted and numbered. The pilots and masters examined praised the system of buoyage in the Humber, and the efficiency of the management.

Thomas Lewis, master of the "Vigilant," said, "They are as good as can be." A pilot said that he had never known a vessel to go on shore there, and similar testimony was obtained from others.

The Hull system of buoyage, namely, black, right, red, left, entering, is the reverse of the Liverpool system, and wants the distinction of form which is adopted at Liverpool.

Circular VI.

LLOYD'S EVIDENCE.

- I. Stephen Oates, Great Grimsby, Lloyd's agent.
- II. GREAT GRIMSBY.
- III. Mr. John Newby, dock master, Great Grimsby.
- IV. Yes.
- VII. Oil is used for the Humber lights; gas is used for the harbour lights at Great Grimsby.
- XI. See code of day and night signals enclosed, approved by the brethren of the Trinity House, London.
- XII. No fog signals are used; in my opinion a bell on the Royal Dock pier head would be very useful in foggy weather.
- XIII. Two square buoys, painted black, are placed in the Royal Dock basin, one on each side the channel.
- XV. At Great Grimsby the Bull floating light, and Humber buoyage dues, are collected by Henry Trittan; say fourpence for every ten tons, as per ship's register.
- XVII. No complaints, to my knowledge.

IPSWICH.

34. IPSWICH.

Circular III.

IPSWICH DOCK COMMISSION.

" V.

IPSWICH, 12th January, 1860.
I HAVE gone carefully through the queries sent by your Board, which seem to me to apply, but in very slight degree, to our river.

The jurisdiction of the Commissioners extends to Harwich Harbour.

We have no lights or beacons, the channel being merely partially buoyed with cask buoys.

These buoys are all shown on the Admiralty Charts of the river, one of which has been taken within the last few weeks.

There are no light or buoy dues whatever, the buoys being maintained by the Commissioners as conservators of the river.

Should the Board desire further information, I shall be most happy to supply any in my power.

I am, &c.,

PETER BN. LONG,

Clerk and Solicitor to the Commissioners.

J. F. Campbell, Esq.,

Pour et au nom du Comité.

JOHN COUTANCHE,
Commis-au-Greffé.Harbour Master's Office, St. Helier, Jersey,
June 6, 1859.

SIR,

I HAVE received your note of 1st instant, in which you inform me you have been directed by the President of the Committee of Harbours to forward me "Returns to Buoys and Beacons," and to request me to answer in writing the several questions asked, in order that the whole may be submitted to the Committee at their next meeting.

In answer, I beg to state, that with respect to the lights, I cannot do better than enclose you my communication of July last to Capt. J. Washington, R.N., Hydrographer to the Lords of the Admiralty. There has been no alteration since, and I have nothing to add to said communication.

As to beacons, I beg to state that I have fixed one of my invented swinging beacons on each of the following rocks, viz. :—

1. On "Sellette Rock." The tide rises about 24 feet above this rock spring tides. The beacon is painted black, and about 20 feet above the rock.

On "Huitriers" or "Oyster Rocks." The tide rises about 22 feet above these rocks spring tides. The beacon is fixed on the middle head, and about 28 feet above the rock.

On "Grune Malett." Covers about the same time as the "Huitriers." The beacon is painted different, as you will observe by the sketch subjoined by steering between these two beacons is the best channel for the inner or small roads. This beacon is about 1½ cable S.E. by S. of the "Huitriers."

On "Demie des Pas." This rock is about 5 feet above the "Huitriers." The beacon is painted black.

On "Frouquie Aubin." This rock is about 8 feet above the "Huitriers." The beacon is painted black, and is from 4 to 5 miles southward of "La Roque Point."

All the above beacons have been fixed in the last 12 to 8 years, and out of the revenue of the Harbour of St. Helier.

There are no buoys to indicate leading marks for any channel round the island.

I have, &c.

JNO. CHEVALIER,

Harbour Master for St. Helier.

To James Godfray, Esq.,
&c. &c.

NOTICE TO MARINERS.

(No 45.)

ENGLISH CHANNEL.—JERSEY.

Lights at St. Helier.

Hydrographic Office, Admiralty, London,
July 6, 1858.

THE Harbour Master at St. Helier, Jersey, has given notice that the following lights are exhibited all night for the guidance of vessels bound into the harbour of that place:—

A fixed white light from the lighthouse on Victoria or New South Pier Head, placed at an elevation of 31 feet above the level of the sea at high water, and should be visible in ordinary weather from a distance of about 6 miles.

A fixed red light from a lantern post on Albert Pier Head elevated 15 feet above high water, and visible in ordinary weather from a distance of about 3 miles.

A fixed blue light on the parapet of the Old North Pier at 477 yards to the N.E. by E. of the Albert Pier light, and it should be seen about 3 miles distant in ordinary weather.

A fixed red light from a lantern post on the Upper Pier Road, 680 yards to the E.N.E. of the Victoria Pier light at an elevation of 46 feet above high water, and also visible 3 miles in ordinary weather.

SEY.

JERSEY.

Vessels approaching the harbour by keeping the Albert Pier red, and Old North Pier blue lights in line, will pass a little to the westward of the Grune St. Michel, and to the eastward, but rather too close to "Les Huitriers" or Oyster Rocks.

The best approach from the westward will be the passage between the Oyster Rocks and the Bues, with the Victoria or New South Pier light in line with the Upper Pier Road red light, although this leads too close to the Grune au Dart and the Grande Vaudin.

(The bearings are magnetic, variation $21\frac{3}{4}^{\circ}$ West in 1858.)

By command of their Lordships,

(Signed) JOHN WASHINGTON,
Hydrographer.

This notice affects the following Admiralty charts:—Jersey Island, No. 62; France, North Coast, Cherbourg to Cape Carteret, No. 58; also Channel Directions by Captain Martin White, fourth edition, page 143, and British Islands' Lights' List for June 1858, Nos. 25, 25*, 26, 26*.

Harbour Master's Office, Gorey, Jersey,
June 17, 1859.

SIR,

In reply to your note relative to returns of buoys, beacons, &c., I beg to state, for the information of the Secretary to the Royal Commission, that the beacons and lights under my superintendance are as follows, viz.:

On "Lequervièrè Rock." The tide rises about five feet above the rock, ordinary spring tides. Upon this rock is a standing beacon painted black, with a "cross" at top, and about 15 feet above the rock.

On "Lecreull." The tide rises about 17 feet above the rock, ordinary spring tides. Upon this rock is a standing beacon painted black, with a large basket at top, and about 30 feet above the rock.

On "Frouques des Grèves." The tides rises about 14 feet above the rock, ordinary spring tides. Upon this rock is a standing beacon painted black, and about 30 feet above the rock; between these two latter beacons is a fine passage about three quarters of a mile wide, and is the best channel for entering Gorey Harbour.

On "Seymour Rock." This rock covers about the same time as Lequervièrè. Upon this rock is a standing beacon painted black, with an arm at top. This rock is about three cables' length E. N. E. from Seymour Tower. Nota.—This beacon is only useful as a leading mark.

On "Anquette." The tide rises about 14 feet above the rock, ordinary spring tides. Upon this rock a beautiful round granite tower is now building, which will be finished (weather permitting) about the middle of August next. The top of the tower will be about 10 feet above high water, ordinary spring tides; it will be surmounted by a mast and globe 15 feet high and 5 feet in diameter, which will place the globe about 25 feet above high water, spring tides. There is at present a beacon painted black, which will be removed as soon as the tower is completed. The rock lies S. E. by S. $\frac{1}{2}$ S. distant five and half miles from Gorey Pier Head.

There are no buoys to indicate leading marks. There is one large Government mooring buoy in the middle of Gorey Roads, where Her Majesty's ships often moor to.

There is a lighthouse on Gorey Pier Head, where a fixed light is kept burning throughout the year, from sunset to sunrise, placed at an elevation of 21 feet above the level of high water spring tides.

There is also a fixed light on the breakwater at St. Catherine's.

The within-mentioned beacons and Gorey harbour light have been fixed and maintained out of the revenue of harbours.

The buoy and St. Catherine's light have been fixed and maintained out of the revenue of Her Majesty's Government.

I have, &c.
(Signed) JOHN AMY,
Harbour Master of Gorey.

To James Godfray, Esq.
&c. &c.

NOTES BY CAPT. RYDER.

Captain Goodrich, commanding "Courier," Jersey packets, states that Green Rock off Point Corbière, south-west corner of Jersey, ought to be buoyed.

Rigdon Shoal, off north-west end of Jersey, should be marked.

Petit Grune and Hubaut Shoals, off Portelet Bay, should be buoyed.

JERSEY.

Pignonet and Petit Four should be buoyed.
Ronnaudière and Diamond Rocks should be marked, and Hungenette.

JERSEY.

Observations
by Commis-
sioners.

The harbour of Jersey be considered very indifferent, and stated that "Courier" pays as harbour dues 4l. 18s. at Jersey, and 3l. 18s. for Guernsey, every voyage. He stated that the Guernsey dues were at one time laid out on the island generally; but now strictly on harbour purposes. It is generally believed that this is not the case at Jersey, and considered that the only lights being merely harbour lights, are quite insufficient for navigation.

I left the "Courier" at Guernsey, and crossed to Jersey in the afternoon in one of the Weymouth packets.

We entered the harbour on a misty night. The approach was evidently very anxious work for the captain, although he was considered the most experienced pilot. There is no light until you get past Corbière. He said he would willingly contribute out of his own pocket towards the expense of a light on Corbière.

Examination at Harbour Master's Office.

Geo. Allix, pilot for 23 years.—Corbière should be lighted. Nature of light must depend on that of the neighbouring lights. Thinks red to the northward would be a useful mark to clear the rocks off the west coast.

- A buoy should be placed inside Grand Four.
- " " on Pignonet.
- " " Diamond Rock.
- " " Bouaudière.
- A beacon " Hingette.
- A bigger beacon " Denn des Pas.

Two leading marks should be placed on Verclut and La Coupe.

A fixed beacon on l'Echiquèze.

Edward Gallishaw, agent for Brighton company (who received one of our covering letters, but no mariners' questions), and Elias Neel, agent for Weymouth and Channel Islands steam packets, agreed in above list of required buoys and lights.

They stated that the island were afraid to ask the Trinity Board to build lighthouses at Corbière for fear of having to pay all the dues when once a collector was established.

There is a correspondence between the States and the Trinity House on the subject.

The two agents say their directors complain very much of inattention and want of distinct published accounts by the Harbour Board.

The harbour accounts were said to be published for the first time in any shape in 1858, but are even now said to be so puzzling as to confuse and mislead practised accountants. The lighting, buoying, and beaconing are supported out of the harbour dues.

Considering that the lighting and buoying was very inefficient, I made inquiries regarding the harbour dues, and was informed that there was a very large surplus every year, but how it was appropriated no one could ascertain. Also that in 1837 a law passed that the impôt on wine and spirits was to be divided, and one portion was to be appropriated to pay off the harbour debt. And on this account, and in opposition to the wishes of the commercial community, the harbour dues were retained at the present high rate, and yet the shipping derives no corresponding benefit. It is now stated by members of the commercial community that they doubt whether the portion of the impôt stipulated to be credited to the Harbour Committee has ever been so treated; they are under the impression that it has been expended for interior purposes. The impôt has been raised twice on the plea of the harbour works, viz., in 1840 and in 1846.

The harbour requires to be made efficient, being now merely a tidal harbour, and inferior to Guernsey. Yet, although the income would allow of a consider-

JERSEY.

JERSEY.

JERSEY.

JERS

Observations
by Commis-
sioners.Observa-
by Com-
sioners.

able sum being borrowed to improve the harbour and properly light and buoy its approaches, the whole of the surplus is carried over, or said to be, to the paying off of the debt. This causes great discontent to the shipping interest; and as the expense of lighting and buoying is not a separate charge, but a charge on the harbour dues, they have no remedy unless the accounts are published in a clear and distinct manner.

Judge De Quetteville, President of the Chamber of Commerce, was said to know all the pros and cons of the matter; but I was warned that it would be difficult to get him to speak out. The country influence is so strong in the Estates that it is said to be a hopeless task to persuade them to let daylight in on their harbour accounts.

Captain Chevalier, the harbour master, was away. He is the inventor of a remarkable floating beacon, a mast on gimbals. A ship passing over it neither injures herself nor it, as it is pressed down and rises again.

Judge Bisson, Chairman of Harbour Board.

Judge Le Galce.

De Ste. Croix.

— Aubyn.

Col. Hemery.

— Nicollo

} Commercial men.

Mr. George Orange, acquainted with nautical matters, has answered our questions—

States that the Jersey people would not ask for a light on Corbière until a light was first placed on Guernsey, where it was most wanted. Now that there is to be a light on Hanois, there ought to be one on Corbière; which, if a ship in passing Hanois had mistaken it for the Lizard or Start, would, when made ahead, inform her of her mistake.

States that it is a mistake to say Hanois or Corbière are so much required by Guernsey and Jersey ships. They are hardly ever wrecked. It is the foreigners who form the long list of wrecks.

Captain Amy, harbour master at Goree, a very intelligent man, states that Cape Gronoz would be the cape to light for the safety of foreigners. Cape Corbière is only a local object.

Query. If Trinity Board lit Gronoz, would island light Corbière?

Visited Goree. Light very indifferent. One Argand.

William Adams, pilot to "Mercury." Very intelligent. Agreed with above.

Circular VI.

LLOYD'S EVIDENCE.

I. Thomas Mallet, Lloyd's Agent and Merchant.

II. ISLAND OF JERSEY.

III. E. L. Bisson, Esq. President of the Committee of Harbours, Jersey.

IV. Yes.

V. None that I am aware of.

XI. None.

XII. The masters of the mail packets have suggested that a person should be appointed to fire occasional guns during fogs at the point near the Corbière Rocks.

XIII. See the harbourmaster's report to the committee of the harbours.

XIV. No.

XV. None.

XVI. I am not aware of any.

XVII. Refer to No. VI. query.

XVIII. None collected.

XIX. None.

XX. I am not. I herewith enclose copies of the harbourmasters of St. Helier and Gouray harbours to the Committee of harbours in this island which gives a full account of the lights and beacons used in this island, and also the bearings of the lights for the Harbour of St. Helier. The currents are so strong, buoys would not be of service round this island. The tower Anquette is completed. No alteration in the lights and beacons has taken place since the harbour master's report.—17th December 1859.

12th May 1860.—The Commission crossed to the Harbour of Goree, Jersey, in H.M.S. "Dasher," Commander P. de Saumarez.

14th May.—Examined witnesses at St. Helier. Mr. Matthew Gallishaw, Agent for Jersey Steam Packet Company, Mr. Elias Neel, Weymouth Steam Agent, agree in stating that it is the universal wish that Corbière, the south-west point of the Island, be lighted as soon as possible.

Captain Amy, commanding the steamer Rose, trading to St. Malo and Granville, and Pilots George Alea, 23 years branch pilot, and Philip Payne, 21 years branch pilot, are very desirous that Cape Corbière should be lighted.

The evidence given by them, with regard to buoys and beacons, confirmed that obtained by Captain Ryder, (see p. 21, England, Local Authorities.)

The Commissioners had an interview with the following members of the Harbour Committee:— Judge Bisson and Messrs. de St. Croix, Nicolle, and Le Gallais. The following Minute was drawn up of their evidence:—

"These gentlemen admitted that it was their duty to properly mark and indicate the approach to the harbour by lights, buoys, and beacons. They also stated that there was a large annual surplus on the harbour dues which was employed for no other purpose than the diminution of the harbour debt, and that a portion of the impôt, an import duty on spirits and wine [see p. 321,] had also been ordered by the States to be expended yearly in diminution of the harbour debt. Books, showing how the revenue received from the impôt had been expended, were sent for and examined, but no trace could be discovered of any record of such an annual application, nor was any distinct statement obtained as to the present state of the harbour debt. A letter was therefore addressed to the Harbour Committee, and they were requested to cause a table to be filled up, giving a detailed account of the receipts both from harbour dues, and impôt, and the expenditure since the harbour improvements commenced, so as to enable the Commissioners to form an opinion as to the state of the fund from which the money must be derived for the erection of those lights, buoys, beacons, &c., which are, in the opinion of all the witnesses examined urgently required for the safety of navigation."

The sites for a light, buoys, and beacons, suggested by the various witnesses examined by Captain Ryder, on the previous visit, (see pp. 310, 311,) and by the above-mentioned witnesses, were again pointed out by Mr. Burney, an experienced officer, late Master of H.M.S. Dasher, and the great advantages to navigation which would result from the light, buoys, and beacons being placed on them as soon as possible were stated most forcibly by him.

It would be advisable, in our opinion, for Commander Sidney to be directed, at an early period, to draw up a plan for lighting, buoying, &c. the approaches of St. Helier, Jersey, as he has done for Guernsey.

Advantage was taken of one of the Commissioners making a subsequent visit to Jersey, to instruct him to ascertain the reason of the remarkable delay of many months on the part of the Harbour Committee in furnishing the information required.

Captain Ryder, the Commissioner referred to, reports as follows:—

6th November 1860.—I have just returned from visiting the Island of Jersey, where I met by appointment Mr. Godfray, one of the Harbour Committee, who had undertaken to prepare the return required by the Royal Commission.

I made the following minute on my meeting with Mr. Godfray, and read it and the above-mentioned

JERSEY and LANCASTER.

Minute over to him before I left; he admitted the truth of both minutes. The harbour accounts appear to be kept in a most unbusiness-like manner. Mr. Godfray had been occupied for some months in endeavouring to draw up the return required, but had failed to do so. Some accounts for past years were not to be found at all; and as to ascertaining with any certainty the progress, if any, of the diminution of the debt, it appeared to be impracticable without the aid of a professional actuary, if then, so inextricable was the confusion. As I have at last ascertained from Mr. Godfray the fact regarding the appropriation of the surplus harbour revenue to other purposes, the tabular return is of no material consequence, but should be printed if it arrives in time.

Minute of meeting with Mr. Godfray.—“In attempting to ascertain the state of the harbour account since the new works commenced, the following difficulty was stated by Mr. Godfray:—“Mr. Le Sueur, who was treasurer from 1847–52, died within the last named year. His accounts were most probably lodged *à greffe*, but cannot now be found owing to the office being changed. His family decline to allow his books to be inspected, on the ground that his accounts have been passed and approved. The surplus revenue for these years cannot therefore be ascertained. In 1853, 5th November, the Governor, Bailie, and Jurats took upon themselves to incur the responsibility of paying off Harbour Debentures to the amount of 42,811*l.* 6*s.* 9*d.* from the impôt, leaving for the harbour account as a charge on the harbour dues 34,249*l.* 14*s.* 3*d.* (Jersey currency.)

“Notwithstanding a surplus of annual harbour receipts from harbour dues, varying from 2,000*l.* to 4,000*l.* since 1856, which, it is admitted, has accumulated since that date to 15,000*l.*, no trace can be found of its appropriation towards the diminution of the harbour debt; it has been otherwise appropriated. The treasurer admits in the ‘re-capitulation, December 1859,’ that the balance against him on account of the harbour is 15,000*l.* The statements of the shipowners and others given to me at my preceding visit, regarding the appropriation of harbour dues to purposes other than reduction of the debt, are therefore fully confirmed.”

The above figures were carefully taken down by me from Mr. Godfray’s statement, and read over to him, but while admitting the accuracy of the minute he did not appear, by any means, certain of the amount.

It is only due to Mr. Godfray to state that he appeared to have every desire to give me clear and explicit information; he admitted with regret that he was prevented from doing more than give me the above general statement by the extraordinary method that had been adopted of keeping the accounts. Amongst all the numerous local authorities having charge of lights, buoys, and beacons, that I have visited, the Harbour Committee at Jersey appear to give the least satisfaction, and most deservedly so, to the shipping interest. It appears to be very problematical whether they will ever efficiently light and buoy the approaches to the harbour, until they are obliged to publish annually an explicit account of harbour receipts and expenditure, with the state of the debt. When this is done, public opinion will find a way of expressing itself, and point out the manner in which any surplus dues may be best employed for lighting and buoying purposes.

36. LANCASTER.

RIVER LUNE LIGHTHOUSE.—(SPECIAL RETURN.)

- I. River Lune, Lancaster.
- II. Commissioners and Trustees of the port of Lancaster.
- III. John Walker, Tonnage Office, Lancaster.

LANCASTER.

- IV. Two lights. One (No. 1) on Abbey Scar Rock, and one (No. 2) on the land about half a mile distant.
- V., VI. None.
- VII. As a guidance for vessels coming up the River Lune.
- VIII. 21st February 1848.
- IX. Charles Blades, jr., Lancaster, Builder. Per contract. John B. Hartley, Liverpool, Engineer.
- X. Harbour lights.
- XI. Stone lighthouse (No. 1) on the Abbey Scar. Solid masonry. Wood lighthouse (No. 2) on the land painted white.
- XII. Fitted with copper lightning conductors.
- XIII. No. 1, 59 feet; No. 2, 53 feet 9 inches.
- XIV. No. 1, 19 feet 6 inches elevation above high-water level. No. 2, 54 feet elevation above high-water level.

- XXXV. No keeper, but under the superintendence of the harbour master.
- XXXVII. None.
- XXXVIII. The lighthouse burns gas.
- XXXIX. None.
- XL. None.
- XLI. None.
- XLII. The general fund belonging to the Commissioners.
- XLIII. No charge made.
- XLIV. No charge made for lighthouse.
- XLVI. None.
- XLVII. None.
- XLVIII. None.
- XLIX. Master mariners generally are not satisfied with the red light, but would wish it to be a white light.
- L. Commissioners of the port.
- LII. No.
- LIII. None.
- LIV. None.
- LV. By tide gauge; by balls on flagstaff and yard by day, and lantern by night.
- LVI. By Marriott's signals by day; by night, none.
- LVIII. Lighted by gas.

The Commissioners have to explain, that they are much disappointed they are not allowed to show a white light instead of a red light. The light as a red light is only useful as a harbour light, whereas, if a white light was shown, it would be visible at least double the distance it is now, and enable vessels to bring up in the roads with more certainty than they can now. The Trinity Board refused to allow a white light.

This light was observed on the night of the 5th of July 1859, from the "Vivid." According to the Lighthouse Chart and the Admiralty list it should be seen at about 7 miles. It could hardly be seen at 4½. The night was remarkably fine. The Owers floating light was seen distinctly at about 9½ miles. Beachy Head shore light, which should be seen at 22 miles, was seen at 25, and the town lights at Brighton and Shoreham were also seen. The light at Little Hampton stands No. 5 on the list of lights visited or seen afloat, and from this observation seems to be inferior to neighbouring lights.

On the 23d of August the lighthouse was visited by Dr. Gladstone. The gas burner is an Argand. The flame was tall, not showing much body of light. The reflector is a "Sideral," and consists of two parabolic conical reflectors one above and the other below the light.

It was evident that a very large portion of the light was lost. It shows red towards the sea, white through three little windows, one showing up the river, the other two along the beach, right and left. There is but one keeper, who is paid 16*s.* per week. He has to work in the gasworks by day, to attend to the lighthouse, and is expected to look at the light every two hours from his cottage, which is very near. He has been there 15 months, and states that he has never broken a glass chimney, nor has the gas ever gone out or flickered from water in the pipes. The lighthouse has a main from the gasworks for itself, and should water ever get into the pipe there are means of pumping it out. The lighthouse was dirty. No books are kept. The gasmeter is in the lighthouse. The panes of red glass were observed to be

LITTLEHAMPTON.

extremely different from one another in colour; and the keeper said that the sun fades them unequally. Observations by Commissioners. It was stated that this light does not serve as a leading light into the harbour; vessels lie off beyond the bar all night.

BUOYS AND BEACONS.

There are no buoys and beacons; the channel of the river is defined by the piers and river banks. Circular V.

LIVERPOOL.
Circular II.

39. LIVERPOOL.

LIGHTHOUSES.—(GENERAL RETURN.)

- I. Mersey Docks and Harbour Board, Liverpool.
- II. 1. Point Lynas. 2. Upper Hoylake. 3. Lower Hoylake. 4. Leasowe. 5. Bidston. 6. Rock Lighthouse. 7. Crosby. 8. Formby (disused.) A chart of Liverpool to Holyhead, including the above named, accompanies this return; the special returns required were furnished in July last.
- III. Sites have been selected in accordance with the particular design in view, viz., for a warning light, as Point Lynas, a bold projecting headland is chosen; the other lights constituting leading lights, their position are necessarily restricted to the line they are intended to indicate.
- IV. The elevation of the lights under the control of the Board is not sufficient to have brought this question under consideration.
- V. Catoptric only.
- VI. The catoptric principle was chosen before the dioptric principle was brought into use.
- VII. Point Lynas, flashing; Rock Lighthouse, revolving; all others fixed.
- VIII. The necessity of distinguishing neighbouring lights from each other governed the selection of the illuminating apparatus in each case; all are of the natural color, except Crosby, which is red, and Rock Lighthouse, which is red on one face.
- IX. The ordinary parabolic reflector and fountain lamp, with argand burner, is the only one in use, the colored lights being affected by tinted glass chimnies.
- X. Filled up.
- XI. Stores are purchased by the officials of the establishment, or by open contract, as at the time may appear to the Board to be most expedient, and are subject to such various tests as may apply to the article under question.
- XII. Fog signals can be conveyed only by sound. Rock Lighthouse only is supplied with fog signals, bells are then used (vide special return), none others of the lighthouses are in a position to use fog signals effectively.
- XIII. No general code is in force. Tide signals, consisting of a ball by day and a light by night, are exhibited only from Rock Lighthouse. The principle upon which those were chosen is supposed to be that of making them visible to an observer, and the selection of the lighthouse was probably governed by its site below high-water mark, affording facilities for observing the tide, and by its position at the turning point to and from a channel nearly dry at low water.
- XIV. Unknown.
- XV. The obligations imposed upon the board by the several successive Acts of Parliament, under which light dues are levied, entail the maintenance of other establishments, than the lighthouses themselves; the purposes to which the light dues are applied being as follows:—1. Maintenance of lighthouses. 2. Line of telegraph to Holyhead. 3. Lifeboat establishment. 4. Buoying and beaconage of the port. 5. Conservancy of the Mersey. The income from light dues cannot therefore be justly compared with the expenditure on the first-named object alone. The following is a statement of income from light dues, and expenditure on lighthouses, as requested:—

Light Dues Income.

1846	1847	1848	1849	1850	1851	1852
8,733 <i>l.</i>	9,712 <i>l.</i>	9,274 <i>l.</i>	10,411 <i>l.</i>	10,066 <i>l.</i>	10,909 <i>l.</i>	11,543 <i>l.</i>

ROCK LIGHTHOUSE.—(SPECIAL RETURN.)

- I. Rock Lighthouse. Near New Brighton, Cheshire.
- II. Mersey Docks and Harbour Board, Liverpool.
- III. M. T. Parks, Lieutenant Royal Navy, Marine Surveyor and Water Bailiff, Dock Offices, Liverpool.
- IV. Single light.
- V. The site of the existing lighthouse was occupied by a timber beacon since the year 1680. The date of the first application for the substitution of a lighthouse is unknown.
- VI. Unknown.
- VII. The lighthouse stands upon a half-tide rock projecting into the river, and which forms the elbow or turning point from the Rock Channel into the Mersey.

POOL.
III.

LIVERPOOL.

- VIII. 1830.
 IX. Builder unknown. Architect, John Foster. No contract.
 X. Sea-light.
 XI. Welsh limestone. Solid. Not coated.
 XII. Iron rod surmounted by a knob with projecting spikes.
 XIII. Ninety-four feet.
 XIV. Sixty-one feet.
 XV. Eight and three quarter miles.
 XVI. Thirteen and three quarter miles.
 XVII. Three hundred and sixty degrees.
 XVIII. Revolving, alternating; twice of the natural colour; once red.
 XIX. The three successive appearances complete one revolution, and occupy three minutes. The duration of each appearance depends in a measure upon the distance of the observer; when near, the interval of darkness is momentary, and increases as the distance absorbs the fainter rays.
 XX. Sunset to sunrise throughout the year.
 XXI. Catoptric.
 XXII. Twenty-four.
 XXIII. Nil.
 XXIV. De Ville and Co., London. Lamps and reflectors have been made at different times by different parties. The name given is that of the maker most recently employed.
 XXV. Chimney in the roof.
 XXVI. Three bells are tolled by the same machinery that causes the light to revolve.
 XXVII. { Twenty-five }
 XXVIII. { days } - { These represent all occasions of fog whether of long or short duration; the average duration equals 4 hours 36 minutes; total fogs equal a period of 115 hours, or 4½ days. }
 XXIX. 27,609l.
 XXX. Finished in 1830.
 XXXI. Diameter 12 feet; height of window 8 feet; conical roof 6 feet 6 inches.
 XXXII. Vide XXIX, and VIII.
 XXXIII. 50l. Either by mechanics attached to the establishment of the Board, by workmen engaged on the spot, or by contract, as at the time may be found expedient.
 XXXIV. Painting, colouring interior, 5l. per annum. No contract. Exterior does not require coating.
 XXXV. One keeper at 90l. per annum, and two assistants at 80l. per annum each
 XXXVI. Glass cylinders - - - £8 16 0
 24 reflectors - - - - - 540 0 0
 24 lamps - - - - - 50 0 0
 Revolving machinery - - - 50 0 0
 Standard fittings, &c., estimated 20 0 0
 Total - - - - - £708 16 0
 (Cost of transport cannot be given.)
 XXXVII. 23l. 14s. 6d. in 1857; 28l. 10s. in 1858. It being usually understood that "wear and tear" is represented by repairs, no additional amount for that item is here included. Of course reflectors, &c. deteriorate, but it would be very difficult to estimate the precise value of such deterioration.
 XXXVIII. Oil, 961 gallons in 1857; 959 gallons in 1858. Wicks, 2,269 in 1857; 2,258 in 1857.
 XXXIX. Best refined olive oil, 5s. 2d. per gallon, in 1857; 4s. 1d. per gallon in 1858.
 XL. Cotton Argand wicks at 1s. 4d. per gross. Cost, 21s. in 1857; 21s. in 1858.
 XLI. Three bells, hammers, &c. Estimated at 75l.
 XLII. Lighthouse dues, levied by the Mersey Docks and Harbour Board. Paid at the Dock Offices.
 XLIII. The dues being levied as a whole, the proportion due for each lighthouse cannot be distinguished; the whole is therefore given:—Midsummer quarter, 1852, 3,340l. 4s. 5d.; 1858, 3,679l. 1s. 1d.; total income, 1852, 11,543l. 14s. 10d.
 XLIV. The expenditure for each lighthouse can be distinguished and is here given for this lighthouse:—406l. 15s. 7d. in 1852; 493l. 9s. 10d. in 1858.
 XLV. Nil.
 XLVI. Nil.
 XLVII. Nil.
 XLVIII. Nil.
 XLIX. Nil.
 L. By local authorities under the Mersey Docks and Harbour.
 LI. Inspections monthly.

LIVERPOOL.

- LII. Never.
 LIII. A spare burner to every lamp. Half a set of spare lamps. Oil stored in an oil room fitted for the purpose.
 LIV. Barometer and thermometer.
 LV. By day a ball is hoisted and exhibited while there is more than 11 feet of water through the rock gut; by night the same is indicated by the exhibition of a fixed light from the same tower beneath the revolving light, visible only in the river and Rock Channel.
 LVI. Marrayt's signals.
 LVII. Two are always on duty in the building, of whom one is always on watch. One is relieved to the shore every second day.
 LVIII. A copy accompanies these returns.

This lighthouse was visited on the 14th of July. Observations by Commissioners. There are three keepers, one at 90l., two at 80l.

The house was dirty. The lantern roof thickly covered with soot from a defect in a chimney which passes through the lantern. There are 22 reflectors, ten with lamps having red chimneys on one side, and 6 on each of two other sides, with chimneys of clear glass. There are three fog bells, rung by machinery.

The light was observed on the 13th of July. It was not lit at 8.45, when passed by the "Vivid," though the sun had set some time before the vessel entered the river. It was not seen till about 9 p.m. on the 15th, when it was again observed from a distance. It appeared to be a good light. It stands 36 on the list of lights visited or seen afloat.

CROSBY LIGHTHOUSE.—(SPECIAL RETURN.) Circular III.

- I. Crosby Lighthouse. On the shore among the sand hills, near the entrance of the River Alt, between Crosby and Formby, Lancashire.
 II. Mersey Docks and Harbour Board, Liverpool.
 III. M. T. Parks, Lieutenant Royal Navy, Marine Surveyor and Water Bailiff, Dock Office, Liverpool.
 IV. Single light.
 V. 1839.
 VI. Captain Denham, R.N., Marine Surveyor.
 VII. Designed, with the Formby Lightship, to lead through the Victoria Channel. The alterations which subsequently occurred in this channel led to this lighthouse being removed, and another built 1,100 yards to the northward.
 VIII. The light was exhibited from the original lighthouse 10th October 1839, and was transferred to the present building 2d November 1847.
 IX. Jesse Hartley, Engineer and Builder.
 X. Sea-light.
 XI. Brick. Square tapered tower. Whitewashed.
 XII. Iron rod surmounted with a knob, with projecting iron spikes.
 XIII. Eighty-one and a half feet.
 XIV. Ninety feet.
 XV. Ten and three quarter miles.
 XVI. Fifteen and a quarter miles.
 XVII. Is masked on bearings from the lighthouse W. to N.N.W. ½ W., and ranges to the north-westward over the intermediate segment of the horizon 63 degrees.
 XVIII. Fixed. Red.
 XIX. Nil.
 XX. Sunset to sunrise throughout the year.
 XXI. Catoptric.
 XXII. Ten.
 XXIII. Nil.
 XXIV. De Ville and Co., Strand, London. Lamps and reflectors have been made at different times by different parties. The name given is that of the maker most recently employed.
 XXV. Chimney in the roof.
 XXVI. Nil.
 XXVII. Nil.
 XXVIII. Nil.
 XXIX. 1,239l. 11s. 11d. Site not included.
 XXX. Finished.
 XXXI. The term lantern does not strictly apply. The light-room constitutes the upper floor of the tower, and is an apartment 11 feet square, with one side glazed with plate glass 5 feet 6 inches in height. The dimensions of the apartment are such that no special arrangements for ventilation are required.

LIVERPOOL.

LIVERPOOL.	LIVERPOOL.	LIVERPOOL.	LIVERPOOL.
<p>XXXII. Vide XXIX.</p> <p>Circular III. XXXIII. Year 1857, 90<i>l</i>. After the building having been discontinued as a lighthouse for several years, it was this year again brought into use. Repairs are effected by mechanics attached to the establishment of the Board, by workmen engaged on the spot, or by contract, as at the time may be found most expedient.</p> <p>XXXIV. Papered, painted, and coloured every three years, at a cost of 40<i>l</i>. Exterior whitewashed.</p> <p>XXXV. One keeper at 84<i>l</i>. per annum, who is required to provide proper assistance.</p> <p>XXXVI. Glass cylinders - - - - £ 7 4 0 10 reflectors - - - - - 225 0 0 10 lamps - - - - - 37 10 0 Standard fittings, &c., estimated 20 0 0</p> <p style="text-align: right;">Total - - - - - £289 14 0</p> <p>(Cost of transport cannot be given.)</p> <p>XXXVII. 11<i>l</i>. 13<i>s</i>. 6<i>d</i>. in 1857; 6<i>l</i>. 4<i>s</i>. 6<i>d</i>. in 1858. It being generally understood that "wear and tear" is represented by repairs, no additional amount for that item is here included. Of course reflectors, &c. deteriorate, but it would be very difficult to estimate the precise value of such deterioration.</p> <p>XXXVIII. Oil, 374 gallons in 1857; 389 gallons in 1858. Wicks, 524 in 1857; 550 in 1858.</p> <p>XXXIX. Best refined olive oil, 5<i>s</i>. 2<i>d</i>. per gallon in 1857; 4<i>s</i>. 1<i>d</i>. per gallon in 1858.</p> <p>XL. Cotton Argand wicks at 1<i>s</i>. 4<i>d</i>. per gross. Cost, 4<i>s</i>. 9½<i>d</i>. in 1857; 5<i>s</i>. 1<i>d</i>. in 1858.</p> <p>XLI. Nil.</p> <p>XLII. Lighthouse dues are levied by the Mersey Docks and Harbour Board. Paid at the Dock Offices.</p> <p>XLIII. The dues being levied as a whole, the proportion due for each lighthouse cannot be distinguished, the whole is therefore given:—Midsummer quarter, 1852, 3,340<i>l</i>. 4<i>s</i>. 5<i>d</i>.; 1858, 3,679<i>l</i>. 1<i>s</i>. 1<i>d</i>.; total income, 1852, 11,543<i>l</i>. 14<i>s</i>. 10<i>d</i>.</p> <p>XLIV. The expenditure for each lighthouse can be distinguished, and is here given for this lighthouse:—1852, not in use; 1858, 263<i>l</i>. 1<i>s</i>. 1<i>d</i>.</p> <p>XLV. Nil.</p> <p>XLVI. Nil.</p> <p>XLVII. Nil.</p> <p>XLVIII. Nil.</p> <p>XLIX. Nil.</p> <p>L. By local authorities under the Mersey Docks and Harbour Board.</p> <p>LI. Monthly.</p> <p>LII. Never.</p> <p>LIII. A spare burner to every lamp. Half a set of spare lamps. Oil stored in an oilroom fitted for the purpose.</p> <p>LIV. None.</p> <p>LV. None. Could serve no useful purpose here.</p> <p>LVI. None; except for directing the lifeboat to vessels in distress.</p> <p>LVII. Keeper resides in the building.</p> <p>LVIII. A printed copy accompanies these returns.</p> <p>N.B.—In the immediate neighbourhood of this lighthouse exists another called Formby Lighthouse, which, being for the present disused, does not appear on an existing lighthouse in these returns. Since 1833 it has been twice in use for periods of five years each time, alternating with the former and present Crosby lighthouses, as changes in the direction of the sea channels rendered necessary changes in the line of the leading lights. Formby Lighthouse was built about 1718; a circular brick tower, 120 feet high, and was designed for a landmark, but in 1833 was converted into a lighthouse. It is now maintained by a care taker in good order, but without illuminating apparatus.</p> <p>This light was observed on the night of the 15th of July 1859 from the "Vivid." It seemed to be a good light, but the red colour was not very marked. It was first seen at 9 p.m. instead of at sunset (8-9 p.m. at Greenwich). It stands 37 on the list of lights visited or seen alight.</p> <p>Circular III. LEASOWE LIGHTHOUSE.—(SPECIAL RETURN.)</p> <p>I. Leasowe. Coast of Cheshire, nearly midway between the Mersey and the Dee estuaries.</p> <p>II. Mersey Docks and Harbour Board, Liverpool.</p> <p>III. M. T. Parks, Lieutenant Royal Navy, Marine Surveyor and Water Bailiff, Dock Office, Liverpool.</p>	<p>IV. Single light.</p> <p>V. Vide Act 2nd Geo. III. cap. 86., A.D. 1761.</p> <p>VI. The act above referred to was promoted by the Trustees of the Liverpool Docks, established under the authority of former Acts of Parliament.</p> <p>VII. Originally the present lighthouse was the inner of two lighthouses designed to form a leading line through the Horse Channel.</p> <p>VIII. 1763.</p> <p>IX. Unknown.</p> <p>X. Sea-light.</p> <p>XI. Circular tapered tower, built of brick walls, believed to be solid. Painted white outside.</p> <p>XII. Iron rod lightning conductor, surmounted by a knob from which several points project.</p> <p>XIII. One hundred and ten feet.</p> <p>XIV. Ninety-four feet.</p> <p>XV. Eleven miles.</p> <p>XVI. Sixteen miles.</p> <p>XVII. Is masked in a direction from the lighthouse, bearing N.E. ¾ N. magnetic, and ranges from that round by the northward and westward, about 125 degrees, when it meets the coast line on a W. by S. bearing.</p> <p>XVIII. Fixed; of the natural colour.</p> <p>XIX. Nil.</p> <p>XX. Sunset to sunrise throughout the year.</p> <p>XXI. Catoptric.</p> <p>XXII. Eight.</p> <p>XXIII. Nil.</p> <p>XXIV. De Ville and Co., Strand, London. Lamps and reflectors have been made at different times by different parties. The name given is that of the maker most recently employed.</p> <p>XXV. Chimney in the roof.</p> <p>XXVI. Nil.</p> <p>XXVII. Nil.</p> <p>XXVIII. Nil.</p> <p>XXIX. Cannot be given. Vide V., VI., VIII., and IX.</p> <p>XXX. Vide V., VI., VIII., and IX.</p> <p>XXXI. The tern lantern does not strictly apply to the light-room, which constitutes the upper floor of the building. It is an apartment nearly circular, 14 feet diameter, a segment of its circumference forming a glazed window 12 feet broad, 8 feet high; the apartment itself being nearly 14 feet high. The dimensions of the apartment renders special ventilating apparatus unnecessary. The lightroom being an integral part of the building, its cost cannot be distinguished.</p> <p>XXXIII. 85<i>l</i>.; either by mechanics attached to the establishment of the board, by workmen engaged on the spot, or by contract, as at the time may be found most expedient.</p> <p>XXXIV. Painted interior and exterior, coloured, and papered, every three years, by open tender. Last contract 78<i>l</i>.</p> <p>XXXV. This lighthouse was visited from the "Vivid" on the 13th of July. The 13 lamps and reflectors are arranged on the inside of a curved frame, and placed in a bow window. The flash is produced by boards which are turned by machinery; they turn slowly till their edges are towards the lamps, and then close suddenly, and shut out the light. The machinery is wound by pulling an endless chain hand over hand rapidly. It takes the keeper 20 minutes to wind it; it goes for 4 hours. He says that the labour is excessive "killing." It was tried and found to be severe. The keeper stated, that there was no one in the house able to do this work but himself. The oil appeared to be very good, and the keeper said that it burned very well. The pilot on board praised the light.

The wife and daughters of the keeper perform the work of an assistant. They clean the reflectors, trim the lamps, and watch the light during the first half of the night. Each reflector had a brown holland cover in front, which no lighthouse then visited had got. The reflectors were well polished, quite equal in that respect to any previously seen. They are 23 years old, and are now much worn. The keeper repairs the machinery himself when it gets out of order. The eldest daughter is allowed 8s. a week. The assistant (when there was one), was allowed 12s. The condition of the reflectors showed that the work was very well performed. The whole establishment was neat and clean. It was stated that "the oven was almost unserviceable, and the Board very seldom visit the place."

This light stands No. 33 on the list of lights visited or seen afloat. As compared with the nearest light establishment on the Skerries under the Trinity House, it is decidedly inferior. The machinery, in particular, is very rude.

N.B. Bidston lighthouse was built to supersede a lighthouse, which was situated on the sea-shore N.W. of Leasowe lighthouse; the latter being washed away, Bidston was erected in such a position as to form the same line of direction as before with the remaining Leasowe lighthouse.

This lighthouse was visited on the 14th of July 1859. The house was moderately clean. The keeper by Observations Commissioners.

LIVERPOOL.
Observations
by Commis-
sioners.

LIVERPOOL.

LIVERPOOL.

LIVER-
Pool.

was found to be a woman apparently about 60 years of age, infirm, and, by her own admission, in weak health. She is assisted by her husband and niece. Her father kept the lighthouse before her.

There are 11 reflectors, but 9 only face the offing. The reflectors were very dull; they had been up for 30 years. The keeper stated that they were scoured every month. Two were sent for next morning, and one sent to a silversmith to be cleaned. In an hour and a half it was returned with the following note.—68 and 70 *Lord Street, Liverpool, July 15, 1859.*—*Sir, the cause of the dullness on the surface of the reflector is that it has not been properly cleaned. I should think the powder used for the purpose was not free from grit as it should be, hence the scratching. I have done the best I could with it in the short time allowed.*

(Signed) *John I. Mayer for Thomas Raris.*

The reflector was not so bright when returned by the silversmith as those previously seen in other lighthouses, for example, at Lynas; but it was very different from the other which was kept for comparison, in the condition in which it left the lighthouse.

There is a hot air apparatus for heating the oil in the lamps. The two outer reflectors had brown holland covers to protect them from the fingers of visitors.

The telegraph station is on the same premises, and is in charge of the light keeper's sister.

The light was observed from the "Vivid" on the night of the 15th. It was lighted at about 9 p.m., the sun had set soon after 8. It was remarked that from the Queen's Channel, Bidston, it appeared very dim. This might be accounted for in some degree if the reflectors are set for some other channel; but compared with the Rock it appeared dull and poor. No. 36 on the list of lights visited or seen alight.

On the 15th of July, 7 captains of Mr. MacIver's ships were examined. All thought that Bidston should be a light of the very first class; 5 thought it was bad, and 2 that it was good enough.

On the same day 5 pilots were examined. They all agreed that Bidston should be as good as possible; that it is the finest light on the coast; that they have never seen a steady light equal to it; one has seen it at 25 miles, another 27. All agreed that it should be a fixed light, and that it cannot be too good; one said that it might be improved. They see the Skerries occasionally. "Flat and the Calf of Man are rather better."

On the same day two captains of tug boats stated that "Bidston is a very good light, as good as any" in the channel; they have seen it 20 or 25 miles.

According to the printed mariners' evidence the light on the Calf of Man has been seen at a distance of 42 miles (see 27, No. 377-541) by two witnesses. That light is favourably mentioned by 21 witnesses; South Stack is favourably mentioned by 23; Skerries by 2; Bidston by 5, namely, 608, John Williams; 609, William Hughes; 611, John Bank; 612, James Wilson; 618, Joseph Powell; who are Liverpool pilots.

It is therefore clear, that Bidston, as compared with lighthouses under other jurisdictions, is decidedly inferior, except in the opinion of local mariners, who agree that it should be a first-class light, and generally compare it with those in the neighbourhood which are under the same jurisdiction.

2. The lights are to be properly exhibited, punctually, at sunset, and continued till sunrise, when they are to be extinguished.

3. The keeper is held responsible for the careful watching and trimming of the lamps throughout the night, and is required to be in attendance during the day, and is not to absent himself from duty, except by leave of the Board, signified in writing.

4. The keeper is to note the time of lighting up all other lightships and lighthouses within his view, and is to report the cause of his missing any during the night, except when they are obscured by reason of fog.

5. He must take charge of all stores, oil, and lighting materials, keeping a strict account in a book provided for that purpose of the quantity daily consumed, and send a copy of the expenditure and stock remaining on hand at the end of each month to the Marine Surveyor; he is cautioned not to waste or destroy, or permit any of the stores to be wasted or destroyed; and should any loss occur through his negligence or carelessness, the amount of such loss will be deducted from his salary.

6. On the first day of each month regularly, and at such other times as any unforeseen contingency may render necessary, he must send to the Marine Surveyor's office a list of such stores as may be required, taking care that such sufficient notice be given as may ensure a timely supply of any deficiency.

7. He must request all visitors to enter their names in the visitor's book, stating whether by his own permission, or by whose order they inspect the lighthouse, and is to take care that they in no wise deface the building, scratch, or injure the reflectors or fittings, and must by no means permit strangers to remain alone in the lightroom. He is strictly prohibited from soliciting or accepting money or presents of any kind, on pain of dismissal.

8. He is strictly forbidden to let apartments in the lighthouse, or take in lodgers at any season of the year.

9. Drunkenness, or any such irregularity of conduct, will be visited with immediate dismissal.

10. The plate-glass of the lightroom is to be kept clean within and without, by night as well as by day, particularly from drift-snow and moisture, which is apt to accumulate on the windows. The reflectors are to be polished daily, and carefully cleaned with the proper materials only; the lamps to be trimmed and the lightroom to be put in perfect order not later than 10 o'clock a.m.; and strict order and cleanliness is to be maintained in every part of the building and premises.

11. A constant look-out is to be kept for vessels in distress, and on any being observed within the probable reach of the lifeboats, the distress flag is to be hoisted over the numbers per chart which indicate the position of the vessel; the time of hoisting the signal, and remarks as to the assistance rendered are to be noted.

12. A look-out is to be maintained upon the light-ships, beacons, and buoys, and information of any accident to them, or any ease of unassisted wreck, or illness or other contingencies which cannot be communicated by signal, is to be forwarded forthwith in writing, by messenger, to the Marine Surveyor's office.

13. The fire-buckets are to be kept constantly filled with water in the lightroom, and they are on no account to be used for household purposes. The water in them is to be changed frequently, and the keeper is strictly enjoined to use his utmost vigilance for the prevention of fire in the building and lightroom.

Revolving or Flashing Lights.

14. On extinguishing the lights in the morning, every part of the machinery is to be carefully examined, the weights to be wound up, and the whole ascertained to be in good working order, and such care is to be taken in the trimming, supply of cotton wick, &c., to the lamps, or in the winding of the machinery, that no necessity may arise during the night for stopping the machinery for any purpose, and the winding-up is not at any time to be delayed to within one hour of the extreme period for which the machine is calculated to run.

15. The wear of any parts of the machinery, or anything which may interfere with its efficient working, must be reported in writing immediately to the Marine Surveyor; and the mode of working is not to be exhibited to strangers or others during the day, lest from inadvertence, or otherwise, any injury should arise which may impede or stop its action during the night.

Point Lynas.—Special Regulation.

16. The keeper is held responsible for the efficient condition of the machinery under his charge; and in the event

Circular H.
Regulations.

MERSEY DOCKS AND HARBOUR BOARD.

REGULATIONS for the MANAGEMENT of LIGHTHOUSES.

General.

1. The lighthouse keepers are severally held responsible that the following regulations, as applicable to the respective lighthouses, are strictly attended to, and any negligence will subject the keeper to the severe displeasure of the Board.

LIVERPOOL.
 of any accident to the light, lamps, lightroom, or machinery which may impede the due exhibition of the light, repairs are to be effected by mechanics to be engaged on the spot; such accidents, cases of personal illness, or any circumstances tending to interfere with the due performance of his duties, are to be communicated by post, without delay, to the Marine Surveyor.

Rock Lighthouse.—Special Regulations.

17. The keeper and assistant keepers are to arrange their turns on shore so that two shall constantly be on duty in the building, and during the night one is constantly to be on watch; the watches to be from sunset to midnight, and midnight to sunrise, and are to be so arranged that the keeper of the first watch on one night is to take the second watch on the following night.

18. Previous to giving up charge of the first watch, the whole of the lamps are to be properly trimmed and lights burning to their full power, clean cylinders to be fitted on, and the machinery to be wound up and going correctly, great care being taken that no variation may occur in the period of revolution, and the keeper on watch is not to give up charge until his relief has duly assumed his duty.

19. The senior keeper on duty by day, and the keeper on watch by night, are held responsible that the bells are kept ringing during fog, and for the proper exhibition of the tide ball, or tide lights, while the water is up to or above the base of the lighthouse, and they are to be careful in keeping a correct account of shipping passing in and out by the Rock Channel, and to be forwarded to the office monthly with the log and store accounts.

20. The whole of the window-shutters of the tower are to be closed at sunset, to prevent any light being seen therefrom. On no account is any dirt or slops to be thrown out of the windows, balcony, or door.

M. T. PARKS,
 Marine Surveyor and Water Bailiff.

REGULATIONS for the MANAGEMENT of the FLOATING LIGHTS.

1. The crews of the respective lightships are established as follows, viz.:—N.W. lightship, 2 masters and 12 men; Formby lightship, 2 masters and 8 men; Crosby lightship, 2 masters and 8 men; but all are subject to do duty in either vessel, as the exigencies of the service may require.

2. The wages of masters are as follows:—N.W. ship, 110*l.* per annum; Formby ship, 100*l.* per annum; Crosby ship, 90*l.* per annum; and the wages of seamen 2*l.* 10*s.* per month each.

3. The masters shall be paid their salaries every quarter after the first four months, leaving one month in arrears, which will be forfeited if they quit the service without giving three months' previous notice to the Marine Surveyor, which notice shall be immediately reported to the Board. The seaman shall be paid every month after the first two months, leaving one month in hand, which will be forfeited if they quit the service without giving one month previous notice. The pay of the masters and men will be subject to making good any loss or injury the vessel, her furniture, or stores may sustain from their individual neglect or carelessness.

4. Every master and seaman is required to provide himself with provisions subject to the directions of the marine surveyor as to the time of taking such provisions on board; an allowance for the supply of provisions is paid to each master at the rate of 17*s.* 6*d.* per week, and to each seaman 13*s.* 6*d.* per week. This allowance is paid each fortnight in advance. Spirituous liquors of all kinds are strictly prohibited. In order to prevent the risk of want of provisions from bad weather, or any unforeseen occurrence, a supply of biscuit, pork, and peas is placed on board each vessel in the care of the master, to be accounted for by him, and charged at prime cost to such of the men as may require to be supplied therefrom.

5. Each master and seaman is held liable to do duty on board the Buoy Tender, and to assist whenever required in placing or removing buoys, and to go on surveying, light-house or lifeboat service, when called upon by the Marine Surveyor, and is held responsible for the safe and prompt delivery of all stores committed to his charge.

6. The number of the crew to be actually on board each ship on service is as follows:—N.W. ship, 1 master and 7 men; Formby ship, 1 master and 5 men; Crosby ship, 1 master and 4 men; their relief to be regulated as nearly as circumstances will permit as follows, viz.:—Each master alternately a month afloat and a month ashore; each seaman two months afloat and one month on shore; and in consideration that when on shore the seamen are frequently called away unexpectedly on services named in Article 5,

LIVERPOOL.
 and being unprepared are put to extra expense in providing themselves under such circumstances, an addition of 2*s.* 6*d.* per month is paid to the seamen constituting the relief on shore.

7. A strict and careful inventory must be kept of each vessel's stores. Each master must examine them, and take the receipt of the succeeding master every month, bringing to the Marine Surveyor's office a copy of the charge of stores left on board with a list of stores expended; and those required in lieu, according to the form supplied; and this article of instruction equally applies to the duplicate vessels, which must be visited by the masters on shore, who are held responsible that each duplicate is kept ready, in every respect, to replace either ship at a tide's notice.

8. Each master and seaman must put his address on the public board in the Marine Surveyor's office; and each master on shore must muster his shore party and report himself at the said office every morning by nine o'clock, and state where he is to be found during that day, and each master alternately must inquire for orders every evening at four o'clock, when not otherwise employed by the Marine Surveyor.

9. In keeping the account of stores and bringing monthly returns to the Marine Surveyor, care must be taken that they are not allowed to run within a fortnight's expenditure, and if anything is required forthwith, it must be stated separately and specially.

10. Each master must take especial care that the lamps and lanterns are constantly kept clean and in good order, as well as every other material belonging to the vessel, and that the lights are properly exhibited every night from sunset to sunrise.

11. Each master must take care that the oil is always emptied into the tanks, and all stores properly stowed away as soon as received on board, and that none are embezzled, stolen, wasted, or lost, as the value of such as may be missing will be deducted from his wages, unless satisfactorily traced or accounted for.

12. Each master must keep a journal of all occurrences and observations according to the form supplied, which is to be read every day at noon to the crew, and signed by the master and senior seaman, so that the occurrences of the night may be faithfully given as observed by the watch on deck.

13. In case of death or any accident incapacitating the master in command of a lightship, the temporary command shall devolve upon the senior seaman on board, the seniority being reckoned according to the length of servitude in the lightships under the Board, except if from any cause a seaman shall have shown himself incompetent, and the Marine Surveyor shall have seen fit to appoint him as junior although having longer servitude than others, when the order of assuming command shall be according to such appointment.
